Europe became a land of cities during the last millennium. The story told in this book begins with North Sea and Mediterranean traders sailing away from Dorestad and Amalfi, and with warrior kings building castles to fortify their conquests. It tells of the dynamism of textile towns in Flanders and Ireland. While London and Hamburg flourished by reaching out to the world and once vibrant Spanish cities slid into somnolence, a Russian urban network slowly grew to rival that of the West. Later as the tide of industrialization swept over Europe, the most intense urban striving and then settled back into the merchant cities and baroque capitals of an earlier era. By tracing the large-scale processes of social, economic, and political change within cities, as well as the evolving relationships between town and country and between city and city, the authors present an original synthesis of European urbanization within a global context. They divide their study into three time periods, making the early modern era much more than a mere transition from preindustrial to industrial economies. Through both general analyses and incisive case studies, Hohenberg and Lees show how cities originated and what conditioned their early development and later growth. How did urban activity respond to demographic and technological changes? Did the social consequences of urban life begin degradation or inspire integration and cultural renewal? New analytical tools suggested by a systems view of urban relations yield a vivid dual picture of cities both as elements in a regional and national hierarchy of central places and also as junctions in a transnational network for the exchange of goods, information, and influence. A lucid text is supplemented by numerous maps, illustrations, figures, and tables, and by substantial bibliography. Both a general and a scholarly audience will find this book engrossing reading. Table of Contents: Introduction: Urbanization in Perspective PART I: The Preindustrial Age: eleventh to Fourteenth Centuries 1. Structure and Functions of Medieval Towns 2. Systems of Early Cities 3. The Demography of Preindustrial Cities PART II: The Industrial Age: Fourteenth to Eighteenth Centuries 4. Cities in the Early Modern European Economy 5. Beyond Baroque Urbanism PART III: The Industrial Age: Eighteenth to Twentieth Centuries 6. Industrial and the Cities 7. Urban Growth and Urban Systems 8. The Human Consequences of Industrial Urbanization 9. The Evolution and Control of Urban Space 10. Europe's Cities in the Twentieth Century Appendix A: A Cyclical Model of an Economy Appendix B: Size Distributions and the Ranks-Size Rule Notes Bibliography Index Reviews of this book: A readable and ambitious introduction to the long history of European urbanization. --Economic History Review Reviews of this book: A trailblazing history of the transformation of Europe. --John Barkham Reviews Reviews of this book: A marvelously compendious account of a millennium of urban development, which accomplishes that most difficult of assignments, to design a work that will safely introduce the newcomer to the subject and at the same time stimulate professional colleagues to review positions. --Urban Studies [Polar Geomorphology](#) Crane Russak, Incorporated This book examines the economics of European cities, their social structures, and the modes and processes of governance.

Global Urban Analysis provides a unique insight into the contemporary world economy through a focus on cities. It is based upon a large-scale customised data collection on how leading businesses use cities across the world: as headquarter locations, for finance, for professional and creative services, for media. These data - involving up to 2000 firms and over 500 cities - provide evidence for both how the leading cities, sometimes called global cities, are coming to dominate the world economy, and how hundreds of other cities are faring in this brave new urban world. Thus can the likes of London, New York and Hong Kong be tracked as well as Manchester, Cleveland and Guangzhou, and even Plymouth, Chattanooga and Xi'an. Cities are assessed and ranked in terms of their importance for various functions such as for financial services, legal services and advertising, plus novel findings are reported for the geographical orientations of their connections. This is truly a comprehensive survey of cities in globalization covering global, world-regional, and national scales of analysis: - 4 key chapters outline the global structure of the world economy featuring the leading cities; - 9 regional chapters covering the whole world also feature the level of services provided by 'medium' cities; - 22 chapters on selected countries and sub-regions indicate global-ness and local-ness and feature an even wider range of cities. Written in an easy to understand style, this book is a must read for anybody interested in their own city in the world and how it relates to other cities.

Geomorphological research in the humid to seasonal tropics has primarily concentrated on the most characteristic landform assemblage of this zone, namely that of stepped, largely undissected etchplains, often dotted with inselbergs and cutting across ancient basement rocks. Although the author discusses extensively this subject, he puts particular emphasis on the differences of chemical weathering and land-forming processes on rocks of various lithology and structure. This contrast becomes most evident, when comparing the highly resistant quartzitic sediments often covering the basement rocks with the easily weathered volcanics, e.g. the Deccan traps of India. The book was first published in German in 1987. However, the present version is much more than a translation, encompassing a range of new ideas and findings in the field of tropical geomorphology. The number of maps and illustrations has also been increased.

European cities are on the rise, and are taking advantage of the opportunities of the European integration and globalization processes. But they also face economic changes, social inequalities, poverty and a new set of constraints. Taking examples through the European Union, European Cities explores the impact of the transformation of the nation states on cities and the change of local societies and local governments. It argues that new modes of urban governance are emerging, and that cities are becoming collective actors within European governance. European Cities shows why and how the bulk of European cities still appear to be original forms of compromise, aggregation, representation of diverse interests, and culture. Different modes of

governance are gradually being structured in most middle size European cities despite processes of social exclusion segregation accompanied by the increased mobility of some citizens. Are Europeans going to invent a new form of institutionalized and territorialized capitalism, of which medium-sized European cities will be one of the pillars and one of the actors? Failing that, the effects of changing scales could be expressed as profound transformations of the European urban model. European Societies Series Series Editor: Colin Crouch Very few of the existing sociological texts which compare different European societies on specific topics are accessible to a broad range of scholars and students. The European Societies series will help fill this gap in the literature, and attempt to answer questions such as: Is there really such a thing as a 'European model' of society? Do the economic and political integration processes of the European Union also imply convergence in more general aspects of social life, like family or religious behaviour? What do the societies of Western Europe have in common with those further to the east? This series will cover the main social institutions, although not every author will cover the full range of European countries. As well as surveying existing knowledge in a way that will be useful to students, each book will also seek to contribute to our growing knowledge of what remains in many respects a sociologically unknown continent.

Balkanization (territorial fragmentation) is becoming a significant urban and geopolitical pursuit in contemporary times. Countries, cities and regions are ever increasingly voicing the desire for independence and balkanization from the nation or union they are a part of. This monograph generally maps the historical and theoretical emergence of balkanization, as well its more recent spread into fields as far ranging as law, medicine, data and security studies, sociology, architecture and the urban. The spatialization of balkanization is particularly addressed in terms of destruction and renewal through a detailed sociopolitical interrogation of architecture and the urban, including their changing symbolic, ideological and functional forms. The spatial connections between balkanization, violent remaking (destruction and renewal) and global politics have predominantly been analyzed via the former Yugoslav context and the Balkans, however, spotlight has also been directed to the current political climate of the UK, Australia and the Anglo-Saxon geopolitics. The analysis helps in understanding broader emergent patterns of sociospatial polarization across various scales, and in respect to global geoeconomic and geopolitical restructuring. This is particularly important because drawing connections between balkanization, economics, law, media and technology is to gain an awareness of - and engagement with - the emerging implications of spatial remaking and global politics. This monograph is a valuable resource and will be relevant to academics and students interested in spatial politics; including architecture, urbanism, geography, sociology, politics, international development, conflict, and cultural studies.

Drawing on territorial ideas prevalent in the Medieval period, Andreas Faludi offers readers ways to rethink the current debates surrounding territorialism in the EU. Challenging contemporary European spatial planning, the author examines the ways in which it puts the democratic control of state territories and their development in question. The notion of democracy in an increasingly interconnected world is a key issue in the EU, and as such this book advocates a Europe where national borders are questioned, and ultimately transgressed.
