designates a new way of making films. It is time to ask whether this novelty is complete or relative and to evaluate to what extent this novation represents a unitary current or multiple ways. The

book proposes to integrate the post-cinema question within the post-art question in order to study the new way of making filmic images in new conditions more or less remote from the dispositif of the theater and in closer relationship with contemporary art. The issue will be considered at three levels: the impression of post-art on "regular" films; the "relocation" (Cassetti) of the same films that can be seen using devices of all kinds, in conditions more or less remote from the dispositif of the theater; parallel to the integration of contemporary art in "regular" cinema, the integration of cinema into contemporary art in all kinds of forms of creation and exhibition.

Student nurse Kumiko has just flunked her physiology exam and has one last shot at passing her makeup test. Lucky for her, newbie health science professor Kaisei needs a guinea pig for his physiology lectures. Join Kumiko in The Manga Guide to Physiology as she examines the inner workings of the body while training hard for the campus marathon. You'll learn all about: -How the digestive system and the Citric Acid Cycle break food down into nutrients and energy -How the body regulates temperature and vital fluids -The body's powerful cell defense system, led by helper T cells and enforced by macrophages -The

architecture of the central nervous system -The kidneys' many talents: blood filtration, homeostasis, and energy production You'll also gain insight into medical procedures like electrocardiograms, blood pressure tests, spiograms, and more. Whether you're cramming for a test like Kumiko or just want a refresher, The Manga Guide to Physiology is your fun, cartoon guide to the human body.

Is a film watched on a video screen still cinema? Have digital compositing, motion capture, and other advanced technologies remade or obliterated the craft? Rooted in their hypothesis of the

"double birth of media," André Gaudreault and Philippe Marion take a positive look at cinema's ongoing digital revolution and reaffirm its central place in a rapidly expanding media landscape. The authors begin with an overview of the extreme positions held by opposing camps in the debate over cinema: the "digitalphobes" who lament the implosion of cinema and the "digitalphiles" who celebrate its new, vital incarnation. Throughout, they remind readers that cinema has never been a static medium but a series of processes and transformations powering a dynamic art. From their perspective, the digital revolution is the eighth

major crisis in the history of motion pictures, with more disruptions to come. Brokering a peace among all sides, Gaudreault and Marion emphasize the cultural practice of cinema over rigid claims on its identity, moving toward a common conception of cinema to better understand where it is headed next.

Feeling Exclusion

Oxbow Books

Feeling Exclusion: Religious Conflict, Exile and Emotions in Early Modern Europe investigates the emotional experience of exclusion at the heart of the religious life of persecuted and exiled individuals and communities in early modern Europe. Between the late fifteenth and early

eighteenth centuries an unprecedented number of people in Europe were forced to flee their native lands and live in a state of physical or internal exile as a result of religious conflict and upheaval. Drawing on new insights from history of emotions methodologies, *Feeling Exclusion* explores the complex relationships between communities in exile, the homelands from which they fled or were exiled, and those from whom they sought physical or psychological assistance. It examines the various coping strategies religious refugees developed to deal with their marginalization and exclusion, and investigates the strategies deployed in various media to

generate feelings of exclusion through models of social difference, that questioned the loyalty, values, and trust of "others". Accessibly written, divided into three thematic parts, and enhanced by a variety of illustrations, *Feeling Exclusion* is perfect for students and researchers of early modern emotions and religion.

Leading French thinker with his key work on philosophical thought *In Metaphilosophy*, Henri Lefebvre works through the implications of Marx's revolutionary thought to consider philosophy's engagement with the world. Lefebvre takes Marx's notion of the "world becoming

philosophical and philosophy becoming worldly” as a leitmotif, examining the relation between Hegelian–Marxist supersession and Nietzschean overcoming. Metaphilosophy is conceived of as a transformation of philosophy, developing it into a programme of radical worldwide change. The book demonstrates Lefebvre’s threefold debt to Hegel, Marx and Nietzsche, but it also brings a number of other figures into the conversation, including Sartre, Heidegger and Axelos. A key text in Lefebvre’s oeuvre, *Metaphilosophy* is also a milestone in contemporary thinking about philosophy’s relation to the world. Reasoning in Physics

Like an old friend who’s turned up in town, Stuart McLean returns with *Stories from the Vinyl Cafe*, his bestselling collection of tales based on his enormously popular Vinyl Cafe radio program. The collection features Canada’s much-loved fictional family: Dave, Morley, Stephanie and Sam. *Stories from the Vinyl Cafe* also introduces a host of other wonderfully imagined characters, such as Margaret Dwyer, a suburban housewife who startles herself by shoplifting a pepperoni sausage, and Flora Perriton, who is consumed with thoughts of lost opportunities when an old friend passes away. Then there’s Ed, who-overcome by the death

of his favourite rock star-embarks on a pilgrimage to New York City to meet the singer's widow. As always, the stories in this rewarding and irreverent collection prove that Stuart McLean is indeed a national treasure.

Ranging on the fringes of imagination and erudition, forming a mosaic of stories, maxims and sketches, at once fragmentary and cumulative, *Jottings from a Far Away Place* combines the timeless, mannered assurance of the Eastern discursive essay with the experimentation of the Western avant-garde. As the focus shifts between fantastic tales and studies of viciousness, the reader

is treated to, among myriad other things, the adventures of a Taoist guitar player, a bloody episode with Countess de Bathory, a recipe for cinnabar sauce, and the story of a man who has been reincarnated as a spoon. A book that is like a collection of bulletins from the world of dreams."

Key Debates - Mutations and Appropriations in European Film Studies

Electrical activity in the myocardium coordinates the contraction of the heart, and its knowledge could lead to a better understanding, diagnosis, and treatment of cardiac diseases. This electrical activity generates an

electromagnetic field that propagates outside the heart and reaches the human torso surface, where it can be easily measured. Classical electrocardiography aims to interpret the 12-lead electrocardiogram (ECG) to determine cardiac activity and support the diagnosis of cardiac pathologies such as arrhythmias, altered activations, and ischemia. More recently, a higher number of leads is used to reconstruct a more detailed quantitative description of the electrical activity in the heart by solving the so-called inverse problem of electrocardiography. This technique is known as ECG imaging. Today, clinical applications of ECG

imaging are showing promising results in guiding a variety of electrophysiological interventions such as catheter ablation of atrial fibrillation and ventricular tachycardia. However, in order to promote the adoption of ECG imaging in the routine clinical practice, further research is required regarding more accurate mathematical methods, further scientific validation under different preclinical scenarios and a more extensive clinical validation

 wants crisp, white, clean walls in his office. But walls have a history and a memory that can't simply be

painted over. A Short History of Indians in Canada, Thomas King's bestselling collection of twenty tales, is a comic tour de force, showcasing the author at his hilarious and provocative best. With his razor-sharp observations and mystical characters, including the ever-present and ever-changing Coyote, King pokes a sharp stick into the gears of the Native myth-making machine, exposing the underbelly of both historical and contemporary Native-White relationships. Through the laughter, these stories shimmer brightly with the universal truths that unite us. HarperCollins brings great works of literature to life in digital format, upholding the highest

In this groundbreaking book David Roberts sets out to demonstrate the centrality of the total work of art to European modernism since the French Revolution. The total work of art is usually understood as the intention to reunite the arts into the one integrated whole, but it is also tied from the beginning to the desire to recover and renew the public function of art. The synthesis of the arts in the service of social and cultural

regeneration was a particularly German dream, which made Wagner and Nietzsche the other center of aesthetic modernism alongside Baudelaire and Mallarmé. The history and theory of the total work of art pose a whole series of questions not only to aesthetic modernism and its utopias but also to the whole epoch from the French Revolution to the totalitarian revolutions of the twentieth century. The total work of art indicates the need to revisit key assumptions of modernism, such as the foregrounding of the autonomy and separation of the arts at the expense of the countertendencies to the reunion of the arts, and cuts across the neat equation of avant-

gardism with progress and deconstructs the familiar left-right divide between revolution and reaction, the modern and the antimodern. Situated at the interface between art, religion, and politics, the total work of art invites us to rethink the relationship between art and religion and art and politics in European modernism. In a major departure from the existing literature David Roberts argues for twin lineages of the total work, a French revolutionary and a German aesthetic, which interrelate across the whole epoch of European modernism, culminating in the aesthetic and political radicalism of the avant-garde movements in

response to the crisis of autonomous art and the accelerating political crisis of European societies from the 1890s forward.

The quality of primary and secondary school mathematics teaching is generally agreed to depend crucially on the subject-related knowledge of the teacher. However, there is increasing recognition that effective teaching calls for distinctive forms of subject-related knowledge and thinking. Thus, established ways of conceptualizing, developing and assessing mathematical knowledge for teaching may be less than adequate. These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and

conventionally well-qualified in mathematics, and because of rising concern that teaching of the subject has not adapted sufficiently. The issues to be examined in *Mathematical Knowledge in Teaching* are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing, assessing and developing mathematical knowledge for teaching.

How do children construct, negotiate and organize space?

The study of social space in any human group is fraught with limitations, and to these we must add the further limits involved in the study of childhood. Here specialists from archaeology, history, literature, architecture, didactics, museology and anthropology build a body of theoretical and methodological approaches about how space is articulated and organized around children and how this disposition affects the creation and maintenance of social identities. Children are considered as the main actors in historic dynamics of social change, from prehistory to the present day. Notions on space, childhood and the construction of both the individual and

the group identity of children are considered as a prelude to papers that focus on analyzing and identifying the spaces which contribute to the construction of children's identity during their lives: the places they live, learn, socialize and play. A final section deals with these same aspects, but focuses on funerary contexts, in which children may lose their capacity to influence events, as it is adults who establish burial strategies and practices. In each case authors ask questions such as: how do adults construct spaces for children? How do children manage their own spaces? How do people (adults and children) build (invisible and/or physical) boundaries

and spaces?

Springer Nature Francesco Casetti believes new media technologies are producing an exciting new era in cinema aesthetics. Whether we experience film in the theater, on our hand-held devices, in galleries and museums, onboard and in flight, or up in the clouds in the bits we download, cinema continues to alter our habits and excite our imaginations. Casetti travels from the remote corners of film history and theory to the most surprising sites on the internet and in our cities to prove the ongoing relevance of cinema. He does away with traditional notions of canon, repetition, apparatus, and

spectatorship in favor of new keywords, including expansion, relocation, assemblage, and performance. The result is an innovative understanding of cinema's place in our lives and culture, along with a critical sea-change in the study of the art. The more the nature of cinema transforms, the more it discovers its own identity, and Casetti helps readers realize the galaxy of possibilities embedded in the medium.

funding in their development from the expansionist golden years of the 1950s and '60s, through the austerity measures of the 1970s and the entrepreneurial ethos of the 1980s, to the budget crises universities face in the 1990s.

This book explores the geometric and kinematic design of the various types of gears most commonly used in practical applications, also considering the problems concerning their cutting processes. The cylindrical spur and helical gears are first considered, determining their main geometric quantities in the light of interference and

undercut problems, as well as the related kinematic parameters. Particular attention is paid to the profile shift of these types of gears either generated by rack-type cutter or by pinion-rack cutter. Among other things, profile-shifted tothing allows to obtain teeth shapes capable of greater strength and more balanced specific sliding, as well as to reduce the number of teeth below the minimum one to avoid the operating interference or undercut. These very important aspects of geometric-kinematic design of cylindrical spur and helical gears are then generalized and extended to the other examined types of gears most commonly used in practical applications,

such as straight bevel gears; crossed helical gears; worm gears; spiral bevel and hypoid gears. Finally, ordinary gear trains, planetary gear trains and face gear drives are discussed. This is the most advanced reference guide to the state of the art in gear engineering. Topics are addressed from a theoretical standpoint, but in such a way as not to lose sight of the physical phenomena that characterize the various types of gears which are examined. The analytical and numerical solutions are formulated so as to be of interest not only to academics, but also to designers who deal with actual engineering problems concerning the gears

Metaphilosophy

Springer Science & Business Media

This book was first published in French in 1994. It has been a training support to numerous researchers as well as practitioners, such as teachers, health workers, personal or sport trainers. Since then, it has constantly been republished and a glossary has been added in 1998. This version is the first complete edition of the book in English. The main idea of this new interview technique is to help a teacher, a supervisor or a researcher to guide the student, the

practitioner or the subject to give a fine retrospective description of an action. As it is only the subject that has access to this mental or physical action, the goal is to help the subject with the verbalization, putting the implicit knowledge of this action in words. Yet, to achieve this verbalization, we need guidance, because we don't know how to give such a description ourselves. If we leave the interviewee without guidance, he risks remaining in the implicit, speaking in a general way, or in an incomplete or imprecise way, commenting instead of describing. The explicit and precise description we aim is the opposite of the implicit, meaning a fine,

detailed and complete way of putting the action in words. The

final aim is to elucidate what the subject did to seek his goal
