The topic of force has long remained a problem of interpretation for readers of Homer's Iliad, ever since Simone Weil famously proclaimed it as the poem's main subject. This book seeks to address that problem through a full-scale treatment of the language of force in the Iliad from both philological and philosophical perspectives. Each chapter explores the different types of Iliadic force in combination with the reception of the Iliad in the French intellectual tradition. Ultimately, this book demonstrates that the different terms for force in the Iliad give expression to distinct relations between self and "other." At the same time, this book reveals how the Iliad as a whole undermines the very relations of force which characters within the poem seek to establish. Ultimately, this study of force in the Iliad offers an occasion to reconsider human subjectivity in Homeric poetry.

Together in one set, Books 4-6 of tWill Travel for Trouble series of short cozy mysteries! Trouble at Hungry Horse, Book 4: Minnie Crockwell, recreational vehicle enthusiast and traveler, no sooner leaves Glacier National Park than she encounters some trouble with her RV and tow car, necessitating an unexpected layover at a campground in the nearby small town of Hungry Horse, Montana. Within an hour of checking in, however, a gunshot rings out, and Minnie finds herself on her hands and knees hiding under a park bench. But the shot wasn't meant for her. In fact, no one can even find the shooter or a gun. Peregrine Ebenezer (Ben) Alvord, Minnie's nineteenth-century ghost traveling companion, knows that someone at the campground has been murdered, but not by a gunshot. It seems everyone hated the victim. Everyone! The question is who hated the victim enough to kill her? Minnie just wants to get her RV fixed and get on the road, but she soon finds herself immersed in the repercussions of a decades-old tragedy. Trouble at Snake and Clearwater, Book 5: Minnie Crockwell, recreational vehicle enthusiast and traveler, receives a call from her niece, Tiffany, who has recently moved from Arizona to Washington to be with her boyfriend. Lonely in a new area, Tiffany asks Aunt Minnie to stop by for a visit. Minnie, on the road in her RV just north in Spokane and hoping to head south to warmer climates for the winter, adjusts her travel plans and heads south to the small city of Clarkston, Washington, at the confluence of the Snake and Clearwater Rivers. Finding a wonderful RV site with a panoramic view of the Snake River, Minnie settles in for a short, relaxing visit with her niece. Binoculars in hand, she admires the scenery—from

the golden hills across the river to the fishermen trolling in boats. The beauty of the scene is marred though, when one fisherman disappears from his boat right before her eyes. Peregrine Ebenezer (Ben) Alvord, Minnie's nineteenth-century ghost traveling companion, can do nothing to save the man from drowning. In fact, he can't even find him. But search and rescue teams do finally locate poor Jim Olson, only to discover that he didn't die by drowning. Everyone liked Jim Olson, everyone except the person who killed him. Minnie vows to stay out of this murder investigation, but she feels responsible since she was the last person to see him alive. Besides the killer, that is. Trouble in Florence, Book 6: Minnie Crockwell, recreational vehicle enthusiast and traveler, is heading south to warmer climates by way of Highway 101, also known as the Oregon Coast Highway and Pacific Highway. She stops for a few days in the quaint little seaside town of Florence, Oregon, for a stay at the Tuscan Sands RV Park. Although the park hardly lives up to its evocative name, the sand dunes of the Florence beaches most certainly do. When in Florence... Minnie wastes no time heading to the beach for a walk with her nineteenth-century ghost companion, Peregrine Ebenezer (Ben) Alvord. Even if it is the middle of December. Less people on the beach though, right? What could be more relaxing than walking on a nearly deserted Pacific Northwest beach? But the dangerous and erratic driver of a blue Jeep, the fierce coastal storm that sweeps through overnight, a barking dog that paws at the sand, and the discovery of a body partially submerged beneath a log on the beach all conspire to take the relax out of relaxing. Against her will and Ben's words of caution, Minnie cannot help but try to solve the mystery of the Trouble in Florence.

Presents information from the primary abiotic forces defining the system, and from the present hydrology, biogeochemistry and physics of major sites of organic carbon production of the McMurdo Dry Valleys. Additionally, research on the physical, chemical, and biological properties of the dry valley soils is included. The role of environmental management in long-term ecological studies is also addressed. The accompanying CDROM provides details and scale to visualize the McMurdo Dry Valleys from an ecosystem perspective.

Packed with facts and illustrations, this landmark book offers a reliable, visually stunning, and family-friendly alternative to online information sources. This fully illustrated encyclopedia is the antidote to the internet. It's an expertly written and beautifully presented reference for a world overloaded with unreliable information. From quantum physics to the square of the hypotenuse, Ancient Rome to the depths of the oceans, this is your one-stop knowledge shop for the digital age—clear, simple, accurate, and unbiased. This book is a comprehensive guide to a huge range of human knowledge and includes over 4,000 images to bring information vividly to life. Its format is accessible to a wide range of readers, so it's ideal for a variety of ages, for home study-or simply for browsing for fun. Parents and teachers can be confident that children won't see any unwanted content. Visual Encyclopedia is the ultimate easy-to-read family guide to science, nature, space, history, art, technology, leisure, culture, and more. The information is organized thematically for simple navigation, and clear signposting makes it easy to follow connections between subjects. For family, for study, for the simple pleasure of discovery, here is a trustworthy source of knowledge and enjoyment.

Rivers have been vitally important to human populations worldwide for millennia as "highways" for inland travel, and as sources of water for drinking, cooking, cleaning, manufacturing, irrigation, and power generation, as well as repositories for human, animal, and industrial wastes. This accessible textbook takes a broad approach to river ecology, covering the basics but going beyond by including topics that are often overlooked such as blackwater streams and rivers, tidal creek ecosystems, and reservoir limnology. Since most running water (lotic) systems have been altered or impacted by human activities, there is significant emphasis on anthropogenic impacts, including sedimentation, nutrient pollution and related eutrophication issues as well as the effects of dams and river fragmentation, power plant operations, chemical contamination, wastewater treatment discharges, industrial scale livestock production, invasive species, and rural and urban storm water runoff on river ecosystems. Advances in stream and river restoration are also discussed.

Sediment dynamics in fluvial systems is of great ecological, economic and human-health-related significance worldwide. Appropriate management strategies are therefore needed to limit maintenance costs as well as minimize potential hazards to the aquatic and adjacent environments. Human intervention, ranging from nutrient/pollutant release to physical modifications, has a large impact on sediment quantity and quality and thus on river morphology as well as on ecological functioning. Truly understanding sediment dynamics requires as a consequence a multidisciplinary approach. *River Sedimentation* contains the peer-reviewed scientific contributions presented at the 13th International Symposium on River Sedimentation (ISRS 2016, Stuttgart, Germany, 19-22 September 2016), and includes recent accomplishments in theoretical developments, numerical modelling, experimental laboratory work, field investigations and monitoring as well as management methodologies.

Now in paperback, a modern guidebook to the ancient wisdom from the Indian spiritual tradition of Vedanta to fuel your purpose and performance. "By contemplating and applying the precious

knowledge in these pages, you will learn to make everything in your life easier than you think possible." -- from the foreword by Dave Asprey Why do some people thrive while others just get by? What's their secret? The ancient Indian spiritual tradition Vedanta calls it prana, or life force. We can call it vital force. By any name, it's the fundamental fuel that activates and optimizes all physical, emotional, and cognitive functions; including consciousness, perception, thinking, judgment, and memory. When we're fully fueled with this essential energy, it transforms our mind-set and moves us toward greater happiness, success, and self-awareness. Rajshree Patel is a former federal prosecutor who discovered Vedanta by accident and went on to become an internationally renowned teacher of its deep wisdom and dynamic practice. In this practical guide, now available in paperback, she gives you back your power with simple tools to take hold of the limitless energy of life itself--more swiftly and easily than you ever thought possible. You'll learn: What vital force is, how it influences every single aspect of your life, how to enhance it--and how your mind, the biggest energy hog, can drain it; Tools to dial down the chatter of your racing mind and resolve your personal energy crisis; Why traditional mindfulness meditation may not be your path to inner peace; Easy biohacking techniques, from breath work to meditation to movement, that reduce stress and maximize joy; and Ancient secrets to fuel your purpose and performance in every aspect of life.

Microplastic Contamination in Aquatic Environments: An Emerging Matter of Environmental Urgency comprehensively illustrates the traditional and advanced technologies on sampling, identification and quantification of microplastic from different environmental media. Contributors summarize and discuss recent research on microplastic and examine studies on nano-sized plastic particles. Chapters cover a full range of microplastic research, including global distribution, detection, environmental fate, biological effects and political legislation. Users will find the book to be a comprehensive overview of microplastic research that is ideal for research and understanding on the occurrence of microplastic in aquatic environments. Provides an overview of the advantages and disadvantages of different methods for sampling, identification and enumeration of microplastics. Contains contributions from world experts with a diverse range of backgrounds, all brought together by a well-known, experienced editor. Presents information on microplastics in a unified place, with easy access for the reader.

The behaviour of river systems is a result of the complex interaction between flow, sediments, morphology and habitats. Furthermore, rivers are often used as a source of water supply and energy production as well as a waterway for transportation. The main challenge faced by river engineers today, in collaboration with environmental and ecological scientists, is to restore the channelized rivers under the constraints of high urbanization and limited space, as well as sustainable water use. During the seventh International Conference on Fluvial Hydraulics "River Flow 2014" at École Polytechnique Fédérale de Lausanne (EPFL), Switzerland, scientists and professionals from all over the world addressed this challenge and exchanged their knowledge regarding fluvial hydraulics and river morphology. This book comprises the proceedings of the high quality contributions of the participants, which reflect the state-of-the-art in the fields of river hydrodynamics, morphodynamics, sediment transport, river engineering and restoration. The conference was organized under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro-Environment Engineering and Research (IAHR). Past River Flow conferences have witnessed a significant increase in participation of our community of river engineers and researchers, confirming the need for such a forum.

"Superb. . . . A gently studious Bill Bryson crossed with an upbeat and relaxed WG Sebald."—James McConnachie, Sunday Times (UK) Half of the world's population today lives in coastal regions lapped by tidal waters. But the tide rises and falls according to rules that are a mystery to almost all of us. In *The Tide*, celebrated science writer Hugh Aldersey-Williams weaves together centuries of scientific thinking with the literature and folklore the tide has inspired to explain the power and workings of this most remarkable force. Here is the epic story of the long search to understand the tide from Aristotle, to Galileo and Newton, to classic literary portrayals of the tide from Shakespeare to Dickens, Melville to Jules Verne. Throughout, Aldersey-Williams whisks the reader along on his travels: He visits the Bay of Fundy in Nova Scotia, where the tides are the strongest in the world; arctic Norway, home of the raging tidal whirlpool known as the maelstrom; and Venice, to investigate efforts to defend the city against flooding caused by the famed acqua alta.

The new fourth edition of *Fundamentals of Geomorphology* continues to provide a comprehensive introduction to the subject by discussing the latest developments in the field, as well as covering the basics of Earth surface forms and processes. The revised edition has an improved logically cohesive structure, added recent material on Quaternary environments and landscapes, landscape evolution and tectonics, as well as updated information in fast-changing areas such as the application of dating techniques, digital terrain modelling, historical contingency, preglacial landforms, neocatastrophism, and biogeomorphology. The book begins with a consideration of the nature of geomorphology, process and form, history, and geomorphic systems, and moves on to discuss: Endogenic processes: structural landforms associated with plate tectonics and those associated with volcanoes, impact craters, and folds, faults, and joints. Exogenic processes: landforms resulting from, or influenced by, the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind, and the sea; landforms developed on limestone; and long-term geomorphology, a discussion of ancient landforms, including palaeosurfaces, stagnant

landscape features, and evolutionary aspects of landscape change. Featuring over 400 illustrations, diagrams, and tables, *Fundamentals of Geomorphology* provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, and providing guides to further reading, chapter summaries, and an extensive glossary of key terms, this is an indispensable undergraduate level textbook for students of physical geography.

Modern theories of meaning usually culminate in a critique of science. This book presents a study of human intelligence beginning with a semantic theory and leading into a critique of music. By implication it sets up a theory of all the arts; the transference of its basic concepts to other arts than music is not developed, but it is sketched, mainly in the chapter on artistic import. Thoughtful readers of the original edition discovered these far-reaching ideas quickly enough as the career of the book shows: it is as applicable to literature, art and music as to the field of philosophy itself. The topics it deals with are many: language, sacrament, myth, music, abstraction, fact, knowledge--to name only the main ones. But through them all goes the principal theme, symbolic transformation as the essential activity of human minds. This central idea, emphasizing as it does the notion of symbolism, brings Mrs. Langer's book into line with the prevailing interest in semantics. All profound issues of our age seem to center around the basic concepts of symbolism and meaning. The formative, creative, articulating power of symbols is the tonic chord which thinkers of all schools and many diverse fields are unmistakably striking; the surprising, far-reaching implications of this new

fundamental conception constitute what Mrs. Langer has called "philosophy in a new key." Mrs. Langer's book brings the discussion of symbolism into a wider general use than criticism of word meaning. Her volume is vigorous, effective, and well written and will appeal to everyone interested in the contemporary problems of philosophy.

This book addresses basic questions concerning the ecological relationships and current conditions of the major river systems in Florida . . . There have been relatively few comprehensive studies made of the rivers of Florida. There is, to be sure, voluminous information that addresses various aspects of riverine ecology. However, little such information has been collected in a way that allows even a preliminary understanding of the driving forces that determine how the diverse freshwater and associated brackish systems function. This lack of useful data is the product of a fundamental ignorance concerning the scale of endeavor, both spatially and temporally, that is needed if we are to understand and, parenthetically, manage the major drainage systems of this area of the country (Livingston, 1987). Research used to address management problems should entail a continuous series of interrelated studies, descriptive and experimental, that answer the immediate (and often less important) questions that are asked on a day-to-day basis. The research should also be designed to answer questions that have not yet been asked. In other words, ecosystem research should be organized on an appropriate scale so that system-wide processes are understood and pr
