'How do children see the world?' is a question of immense importance which fascinates not only psychologists but also parents and all those concerned with education. In this English translation, first published in 1976, the author, who was Professor of Psychology at the René Descartes University in Paris, provided the most comprehensive review at the time of the development of visual perception in children, a field to which she herself had made a substantial contribution. Her book, which gave the first comprehensive study of the relationship between cognitive development and perceptual activities in small children, explores how they interpret visual information and gradually build up a picture of the world. The author had devoted fifteen years to

research on the visual world of the child and possessed an exhaustive knowledge of the experimental literature on the subject in English, French, Russian and other languages. She saw perception as a form of knowledge which the child exploits and adapts in a variety of ways at different stages of development. This is brilliantly demonstrated in her own research on the strategies children use in judging things as 'different' or 'the same' and the way these relate to the structure of their perceptual organisation. This book is essential reading for anyone with a serious interest in developmental and cognitive psychology; it also provides an object lesson in the application of experimental methods. In addition the organisation of the material made it a valuable textbook

for advanced undergraduate and post-graduate teaching and will still be of interest in its historical context today. *La Psychologie Anglaise Contemporaine* Psychology Press

A la fois champ de pratiques et champ de recherches, la psychologie de l'orientation scolaire et professionnelle est sollicitée pour contribuer à la

résolution de nombreux grands défis des sociétés contemporaines : digitalisation du travail et développement de l'intelligence artificielle, augmentation de la démographie mondiale, développement durable, globalisation de l'économie, accroissement du nombre de ruptures professionnelles chez les travailleurs les plus stables, précarisation professionnelle pour les autres, développement des conditions de travail non décentes, baisse du salariat, accroissement des écarts de richesse, etc. Cet ouvrage dessine des pistes pour l'avenir tant sur le plan épistémologique et théorique, que sur celui des pratiques d'aide à l'orientation et des compétences des professionnels et acteurs qui participent à l'orientation.

Jean-Jacques Leyens revisite les mécanismes, conscients ou non, qui président au racisme et invite le lecteur à une remise en question salvatrice. Je sais que je suis raciste, peut-être même envers plusieurs groupes. Je le regrette ; je préférerais dire que je ne suis pas d'accord avec certains groupes et, pourtant, il m'arrive d'avoir des accès jubilatoires quand des ennuis arrivent à un des groupes vis-à-vis desquels je me considère raciste. Je sais aussi que je ne voterais jamais pour un parti, nationaliste par exemple, qui aurait le moindre relent raciste. Je suis contre le racisme. Je sais encore que je ne suis pas excentrique ; je me considère dans la moyenne des gens. Je suis également un scientifique et non un rêveur. Mes

convictions que le racisme est quasi universel sont donc basées sur une interprétation de recherches fiables et cohérentes. Cette interprétation n'est pas farfelue, même si nombre de collègues ne l'acceptent pas publiquement. Comme mes collègues, j'espère la disparition du racisme, mais nous différons sur les moyens à employer. J'écris ce livre avec la conviction que les conséquences les plus néfastes du racisme disparaîtront ou diminueront si l'on accepte tout d'abord ce côté nauséabond de notre personne. Se battre contre ce que l'on ignore ou occulte est totalement vain. Améliorer ses faiblesses commande qu'à tout le moins on soit conscient de ses déficiences. Dans cette nouvelle édition, l'auteur appelle à comprendre et

admettre le racisme ordinaire pour mieux le dépasser. CE QU'EN PENSE LA CRITIQUE Face au « psychologiquement correct », le je-ne-suis-pas-raciste, l'auteur propose de reconnaître d'abord la part de comportements racistes que nous manifestons consciemment ou pas, condition nécessaire [...] pour lutter contre le rejet des autres. - Aide-Mémoire D'un esprit résolument pédagogique, clair et concis, sans ton moralisateur, pour ceux qui souhaitent se faire une idée des mécanismes fondamentaux du racisme, cet écrit constitue une belle entrée en matière. - Abdelatif Er-rafiy, Cerveau&Psycho Définition, préjugés, discriminations, stéréotypes, déshumanisation, non-dits...forment la trame de cet ouvrage dont les nombreux exemples invitent le

Two things are certain in the contemporary workplace: the aging of employees, and negative attitudes toward them - especially those with disabilities—by younger colleagues and supervisors. Yet related phenomena seem less clear: how do negative stereotypes contribute to discrimination on the job? And how are these stereotypes perceived in legal proceedings? Bringing theoretical organization to an often unfocused literature, *Disability and Aging Discrimination* offers research in these areas at the same level of rigor as research into racial and gender discrimination. The book applies Social Analytic Jurisprudence, a framework for testing legal assumptions regarding

behavior, and identifies controversies and knowledge gaps in age-discrimination and disability law. Chapters provide historical background or present-day context for the prevalence of age and disability prejudices, and shed light on the psychosocial concepts that must be understood, in addition to medical considerations, to make improvements in legal standards and workplace policy. Among the topics covered: • Applying Social Analytic Jurisprudence to age and disability discrimination. • The psychological origins and social pervasiveness of ageism. • Growing older, working more: the boomer generation on the job. • Limitations of the Americans with Disabilities Act. • Disability and procedural fairness in the

workplace. • Cross-cultural perspectives on stigma. The first volume of its kind, Disability and Aging Discrimination is essential reading for researchers, forensic and rehabilitation psychologists/psychiatrists, and those involved in the well-being of older and disabled workers.

Although group conflict is hardly new, the last decade has seen a proliferation of conflicts engaging intrastate ethnic groups. It is estimated that two-thirds of violent conflicts being fought each year in every part of the globe including North America are ethnic conflicts. Unlike traditional warfare, civilians comprise more than 80 percent of the casualties, and the economic and psychological

impact on survivors is often so devastating that some experts believe that ethnic conflict is the most destabilizing force in the post-Cold War world. Although these conflicts also have political, economic, and other causes, the purpose of this volume is to develop a psychological understanding of ethnic warfare. More specifically, Handbook of Ethnopolitical Conflict explores the function of ethnic, religious, and national identities in intergroup conflict. In addition, it features recommendations for policy makers with the intention to reduce or ameliorate the occurrences and consequences of these conflicts worldwide.

Queer Psychology is the first

comprehensive book to examine the current state of LGBTQ communities and psychology, through the lenses of both queer theory and Intersectionality theory. Thus, the book describes the experiences of LGBTQ people broadly, while also highlighting the voices of LGBTQ people of color, transgender and gender nonconforming people, those of religious minority groups, immigrants, people with disabilities, and other historically marginalized groups. Each chapter will include an intersectional case example, as well as implications for policy and practice. This book is especially important as there has been an increase in psychology and counseling courses focusing on LGBTQ communities; however, students often learn about LGBTQ-related issues

through a White cisgender male normative perspective. The edited volume contains the contributions of leading scholars in LGBTQ psychology, and covers a number of concepts – ranging from identity development to discrimination to health.

This book provides a unique perspective on the perpetrators and victims of political violence, using original evidence from the deadly attacks perpetrated in Paris in 2015. Much of the current literature focuses on the perpetrators of such violence. This volume, however, offers a deeper analysis by focusing not only on the terrorists themselves but on understanding the reactions of the general population affected by such

lethal acts. It provides a more detailed view of the opponents of terrorism, namely us, and explains how our own reactions can increase or decrease, the potential for political violence. Part I introduces the most relevant theories within social psychology and political psychology that are used to understand terrorism; Part II examines empirical evidence from a French context; and Part III discusses policy implications, with the prevention of political violence as a long-term goal. Finally, the volume offers a blueprint for a more appropriate conceptualization of terrorism as arising out of intergroup conflict suggesting ways to build a resilient society. This book will be of interest to researchers, teachers and students across social psychology, sociology, political

psychology and political science.

The Imitation of Gestures describes the sets of tests of the imitation of gestures in children performed by the examiner. These tests provide valuable information about the development of motor skills, particularly the right-left orientation in children from 4 to 8 years of age. This book is composed of two main sections encompassing 9 chapters. Part I presents the methods for studying the imitation of simple and complex gestures of the hands and arms. This

part also covers the application of these methods to children who would be likely to have disturbances in motor and verbal development. The second part describes the supplementary tests to the Imitation of gestures test used for the study of body image. This part also deals with the intercorrelations between the results obtained on the different tests, namely, the Imitation of gestures, Drawn-a-man test, Grace Arthur mannequin puzzle, and the verbal test of naming and pointing to the body parts. Pediatricians, neurologists, and clinical psychologists will find this book rewarding.

La 4e de couverture indique : "Racisme, sexisme, rejet de l'immigration, traitement défavorable réservé aux

personnes handicapées ou sans emploi : ce manuel, le premier de cette ampleur en français, offre un état des lieux riche et documenté sur les préjugés et discriminations, incluant les dernières recherches. Les auteur·e·s y analysent, dans différents contextes, leurs origines, processus sous-jacents et conséquences. Exhaustif, l'ouvrage développe à la fois les perspectives francophones et anglo-saxonnes, et offre un regard croisé dominant·e·s/dominé·e·s. En plus des modèles descriptifs, il propose des pistes d'action concrètes et des moyens d'agir dans une approche préventive. Il constitue dès lors un outil inestimable tant pour les étudiant·e·s et enseignant·e·s en psychologie que pour les praticiens."

This book focuses on anti-discrimination law in order to identify commonalities and best practices across nations. Almost every nation in the world embraces the principle of equality and non-discrimination, in theory if not in practice. As the authors' expert contributions establish, the sources of the principle vary considerably, from international treaties to religious law, traditions and more. There are many approaches to methods of enforcement and other variables, but the principle is nearly universal. What does a comparison of the laws and approaches across different lands reveal? Readers may explore the enforcement and effectiveness of anti-discrimination law

from 25 nations, across six continents. Esteemed authors examine national, regional and international systems looking for common and best practices, identifying innovative approaches to long-standing problems. The many ways that anti-discrimination law is enforced are brought to light, from criminal or civil prosecution through to community resolution processes, amongst others. Through comparing the approaches of different lands, the authors consider which methods of enforcement are effective. These enriching national and international perspectives highlight the need for more creative, concrete and coordinated means of enforcement to ensure the effectiveness of anti-discrimination law, regardless of the legal tradition concerned, but in light of

these traditions. Readers will find each nation remarkable, and learn something new and interesting from each report.
