 Chemical peeling is a technique used to improve the appearance of the skin that is typically performed on the face, neck or hands. In this treatment, a chemical solution is applied to the skin that causes it to "blister" and eventually peel off. The new, regenerated skin is usually smoother and less wrinkled than the old skin (American Society for

Dermatologic Surgery). This second edition is a step by step guide to chemical peels. Beginning with an introduction to the procedure, an overview of the different types of peels and advice on getting started, each of the following chapters provides more in depth information on different peels and their appropriate use with different types of skin. The final chapters discuss complications, case studies and offer 'ten golden rules for perfect peeling'. The new edition has been fully revised to provide the most recent advances in chemical peeling and three new chapters have been added covering acne and acne scars, facial melanoses, and periocular peels. This comprehensive atlas

includes more than 170 clinical images and tables, as well as a DVD demonstrating procedures. This book is a rich source of information on skin disorders due to toxicants in the environment. State of the art knowledge is summarized concerning the molecular basis of skin damage caused by well-appreciated environmental noxae. The book also provides a uniquely comprehensive

overview of the detrimental dermatological effects of exposure to air pollution and global climate change. A special focus is contact allergy, which, beyond representing a major problem in dermatotoxicology, serves as a prime example for the development of toxicological approaches to risk assessment. A further chapter is devoted to contact urticaria, a condition that can progress to life-threatening anaphylactic reactions. The novel information offered in this book will enable the reader to go beyond the traditional thinking of dermatotoxicology and achieve a modern appreciation of the highly complex

interplay between skin and environment.
