Standards**

The concept behind the development of BS 9999 and BS 7974 is that technical guidance on fire safety is provided at three different levels. This permits a design approach to

be adopted that corresponds to the complexity of the building and to the degree of flexibility required. The three levels are as follows: *Bs 9991 Document On Fire* BS 9991 exists to help people put adequate fire safety measures in place in residential buildings. This includes fire detection and alarm systems and fixed fire-fighting systems. The 2015 revision provides a full technical

update, to take into account new and revised standards published since its last publication, in 2011.
