This is the third in a series of catalogs and bibliographies of the Cicadoidea covering 1981-2010. The work summarizes the cicada literature, providing a means for easy access to information previously published on a particular species or to allow researchers the ability to locate similar work that has been published on other species.

A total of 2,591 references are included in the bibliography. The book is a source of biological and systematic information that could be used by zoologists, entomologists, individuals interested in crop protection, and students studying entomology as well as anyone interested in cicadas or who require specific information on the insects. Each genus/species is identified

with the reference, the page number, any figures (if applicable), the topics covered by the reference, any synonymies, and any biogeographic information mentioned for the species in the individual reference. An added benefit to the catalog is that it is the first complete species list for the Cicadoidea, including all synonymies and new combinations through 2012. Provides nearly four times the

number of references of the previous catalog, demonstrating the explosion of data since that time. Contains all references found that mention a genus or species name in the work. Includes more than 300 additional references that were not in the two previous works on this subject. Features the first complete species list for the Cicadoidea, including all synonymies. **European**

Work began in 1990 to harmonise the criteria and methodologies used to record data on accidents at work in

Europe. There have been three phases to the project. The first looked at the economic activity of the employer, age and sex of the victim and nature of the injury. The second supplemented this information with data on the size of the enterprise and the victims' nationality and employment status. The third phase looked at harmonising the classifications and variables of causes and

circumstances of accidents at work. This publication represents the work on the methodology of the three phases and presence a full set of variables with their classifications, explanatory notes and coding guides. It is intended primarily for the institutions responsible for recording and processing information on accidents at work, e.g. statistical offices, insurance companies and mutual

societies. More widely it will be of interest to experts working in the field and businesses in general. **Handbook on the Least Developed Country Category** Routledge This publication is a history of the partnership between Indonesia and the Asian Development Bank (ADB).
