Magnetoencephalography (MEG) is an exciting brain imaging technology that allows real-time tracking of neural activity, making it an invaluable tool for advancing our understanding of brain function. In this comprehensive introduction to MEG, Peter Hansen, Morten Kringelbach, and Riitta Salmelin have brought together the leading researchers to provide the basic tools for planning and executing MEG experiments, as well as analyzing and interpreting the resulting data. Chapters on the basics describe the fundamentals of MEG and its instrumentation, and provide guidelines for designing experiments and performing successful measurements. Chapters on data analysis present it in detail, from general concepts and assumptions to analysis of evoked responses and oscillatory background activity. Chapters on solutions propose potential solutions to the inverse problem using techniques such as minimum norm estimates, spatial filters and beamformers. Chapters on combinations elucidate how MEG can be used to complement other neuroimaging techniques. Chapters on applications provide practical examples of how to use MEG to study sensory processing and cognitive tasks, and how MEG can be used in a clinical setting. These chapters form a complete basic reference source for those interested in exploring or already using MEG that will hopefully inspire them to try to develop new, exciting approaches to designing and analyzing their own studies. This book will be a valuable resource for researchers from diverse fields, including neuroimaging, cognitive neuroscience, medical imaging, computer modelling, as well as for clinical practitioners.

Written in 1969, this provides an evaluation of global resources and the projection of population pressure beyond the limits of the ecosystem unless we change our priorities and adjust to global planning for managing our development.

Professeurs, conseillers d’éducation et élèves des collèges et lycées décrivent les relations tendues dans les classes et les établissements. Ni les uns, ni les autres ne sont satisfaits. Ils dénoncent le décalage entre ce qui est et ce qui devrait être. Une grande partie des élèves et des enseignants sont livrés à eux-mêmes alors qu’en même temps, les autorités mettent en place des classes d’élite, des classes protégées, réservées à une élite. Les entretiens présentés dans cet ouvrage datent des années 1990.

This Open Access book explains that after long periods of prehistoric research in which the importance of the archaeological as well as the natural context of rock art has been constantly underestimated, research has now begun to take this context into focus for documentation, analysis, interpretation and understanding. Human footprints are prominent among the long-time under-researched features of the context in caves with rock art. In order to compensate for this neglect an innovative research program has been established several years ago that focuses on the merging of indigenous knowledge and western archaeological science for the benefit of both sides. The book gathers first the methodological diversity in the analysis of human tracks. Here major representatives of anthropological, statistical and traditional approaches feature the multi-layered methods available for the analysis of human tracks. Second it compiles case studies from around the globe of prehistoric human tracks. For the first time, the most important sites which have been found worldwide are published in a single publication. The third focus of this book is on firsthand experiences of researchers with indigenous tracking experts from around the globe, expounding on how archaeological sciencecan benefit from the ancestral knowledge. This book will be of interest to professional archaeologists, graduate students, ecologists, cultural anthropologists and laypeople, especially those focussing on hunting-gathering and pastoralist communities and who appreciate indigenous knowledge.--

Henri Lefebvre has considerable claims to be the greatest living philosopher. His work spans some sixty years and includes original work on a diverse range of subjects, from dialectical materialism to architecture, urbanism and the experience of everyday life. The Production of Space is his major philosophical work and its translation has been long awaited by scholars in many different fields. The book is a search for a reconciliation between mental space (the space of the philosophers) and real space (the physical and social spheres in which we all live). In the course of his exploration, Henri Lefebvre moves from metaphysical and ideological considerations of the meaning of space to its experience in the everyday life of home and city. He seeks, in other words, to bridge the gap between the realms of theory and practice, between the mental and the social, and between philosophy and reality. In doing so, he ranges through art, literature, architecture and economics, and further provides a powerful antidote to the sterile and obfuscatory methods and theories characteristic of much recent continental philosophy. This is a work of great vision and incisiveness. It is also characterized by its author's wit and by anecdote, as well as by a deftness of style which Donald Nicholson-Smith's sensitive translation precisely captures.

NATIONAL BESTSELLER • A restless young journalist with big dreams interviews a Hollywood heartthrob—and reunites with him ten years later to discover exactly how he feels about her in this sexy and engrossing novel “You will absolutely devour this book. It’s filled with delightful banter, hot romance, and a love story that’s worthy of the big screen.”—Kate Spencer, author of *In a New York Minute* and host of *Forever35* ONE OF THE BEST BOOKS OF THE YEAR: *Cosmopolitan*, NPR, *The Washington Post*, *Book Riot* Then. Twenty-something writer Chani Horowitz is stuck. While her former MFA classmates are nabbing high-profile book deals, all she does is churn out puff pieces. Then she’s hired to write a profile of movie star Gabe Parker: her number one celebrity crush and the latest James Bond. All Chani wants to do is keep her cool and nail the piece. But what comes next proves to be life changing in ways she never saw coming, as the interview turns into a whirlwind weekend that has the tabloids buzzing—and Chani getting closer to Gabe than she had planned. Now. Ten years later, after a brutal divorce and a healthy dose of therapy, Chani is back in Los Angeles as a successful writer with the career of her dreams. Except that no matter what

new essay collection or online editorial she’s promoting, someone always asks about The Profile. It always comes back to Gabe. So when his PR team requests that they reunite for a second interview, she wants to say no. She wants to pretend that she’s forgotten about the time they spent together. But the truth is that Chani wants to know if those seventy-two hours were as memorable to Gabe as they were to her. And so . . . she says yes. Alternating between their first meeting and their reunion a decade later, this deliciously irresistible novel will have you hanging on until the last word.

The need for an axiomatic treatment of homology and cohomology theory has long been felt by topologists. Professors Eilenberg and Steenrod present here for the first time an axiomatization of the complete transition from topology to algebra. Originally published in 1952. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Covering both the history of mathematics and of philosophy, Descartes's *Mathematical Thought* reconstructs the intellectual career of Descartes most comprehensively and originally in a global perspective including the history of early modern China and Japan. Especially, it shows what the concept of "mathesis universalis" meant before and during the period of Descartes and how it influenced the young Descartes. In fact, it was the most fundamental mathematical discipline during the seventeenth century, and for Descartes a key notion which may have led to his novel mathematics of algebraic analysis.

'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date.
