This multidisciplinary handbook explores concrete case studies which illustrate how sustainability science and research can contribute to the realization of the goals of the 2030 Agenda for Sustainable Development. It contains contributions from sustainability researchers from across the world.

Protecting the Rights of Women Migrant Domestic Workers John Wiley & Sons

The book presents an up-to-date review of turbulent two-phase flows with the dispersed phase, with an emphasis on the dynamics in the near-wall region. New insights to the flow physics are provided by direct numerical simulation and by fine experimental techniques. Also included are models of particle dynamics in wall-bounded turbulent flows, and a description of particle surface interactions including multi-layer deposition and re-suspension.

Gendering Struggles Against Informal and Precarious Work CRC Press

"The most influential thinker, in my life, has been the psychologist Richard Nisbett. He basically gave me my view of the world." - Malcolm Gladwell, New York Times Book Review Scientific and philosophical concepts can change the way we solve problems by helping us to think more effectively about our behavior and our world. Surprisingly, despite their utility, many of these tools remain unknown to most of us. In *Mindware*, the world-renowned psychologist Richard E. Nisbett presents these ideas in clear and accessible detail. Nisbett has made a distinguished career of studying and teaching such powerful problem-solving concepts as the law of large numbers, statistical regression, cost-benefit analysis, sunk costs and opportunity costs, and causation and correlation, probing the best methods for teaching others how to use them effectively in their daily lives. In this groundbreaking book, Nisbett shows us how to frame common problems in such a way that these scientific and statistical principles can be applied to them. The result is an enlightening and practical guide to the most essential tools of reasoning ever developed—tools that can easily be used to make better professional, business, and personal decisions.

How to Be a High School Superstar Taylor & Francis

This book analyzes the common set of obstacles to the development and integration of government Information and Communication Technology (ICT) projects and effective e-government initiatives in developing countries. It draws on the expertise and experience of more developed states in the Pacific, notably Australia and New Zealand, both highly rated in global rankings for e-government and active in a variety of e-government development projects across the region. There has been a general failure to identify priorities and align projects with local needs in ICT/e-government projects. Small Island Developing States (or SIDS) present a unique problem in terms of e-government. Not only do they suffer from a common set of barriers to ICT development such as their remoteness, geographical dispersion, moist tropical climates, largely rural populations, and lack of ICT capacity and infrastructure, but are also dependent on external agencies for investment, and must negotiate with powerful donors who have conflicting agendas. E-government is widely regarded as 'transformational', increasing efficiency, productivity, accountability, economic growth, and citizen involvement. But while the governments of SIDS are committed to harnessing ICTs for effective government and economic development, they face major challenges in establishing successful e-government initiatives, due to the problems outlined above, coupled with a lack of HR capacities and appropriate strategies and policies. Drawing on the experience of the states mentioned above, as well as regional quasi-governmental bodies, nongovernmental organizations (NGOs), aid agencies, and the private sector, the book will be of interest to researchers and students in the fields of e-government, public administration, political science, communication, information science, and social media.

The Technical Director's Toolkit Taylor & Francis

The book presents many aspects of the phenomenon of translation and commentary work of the Bible in the Polish-Lithuanian Commonwealth in the 16th and 17th centuries. It contains studies of eminent scholars as well as of some young adepts, coming mainly from Poland, but also from Lithuania and Czech Republic. The texts present various aspects of the researches conducted on this phenomenon nowadays. As it was an exceptional movement, extremely varied and long-time lasting, it would be difficult to offer its complete synthesis in one

volume. Though, the exhaustive presentation of the historical and linguistic contexts allows the reader to understand the phenomenon. Intensified interest in translations of the Bible is closely connected with the interest in the Polish language, its literary expression as well as its grammatical and orthographic standardisation that occurred just in the same time. The intellectual activity related to the Bible contributed simultaneously to the development of the Polish literary language and even inspired the translations of the sacred texts of other religions present in the country. Moreover, contacts between different languages of Central and Eastern European area, where many attempts of new translations appeared, are very important. A quick rise of the different Reformation movements contributed to a »natural« need for new translations and commentaries to be used by community members. These new currents, first easily accepted and spread in the country, even when suppressed, could not stop this activity, and later new Catholic translations and commentaries of the post-Trident period, both in Polish and Lithuanian, proved it. Big part of study is also dedicated to particular typographical realizations of this activity and an interesting example of the musical expression directly inspired by the biblical translation, is also provided.

This edited volume by Professor Randall S. Abate of Florida A&M University College of Law presents a collection of 17 chapters in an attempt to fill the gap - as illustrated above - between the complex legal issues that matter most to environmental law and animal law movements. Environmental law has a longer history and is more established than its animal law counterpart with intricate layers of international, federal, state, and local laws. Animal law currently faces many of the legal and strategic challenges that environmental law faced in seeking to establish a more secure foothold in U.S. and international law and, as such, stands to gain valuable insights from the lessons of the environmental law movement's experience in confronting those challenges. These chapters compare the very different trajectories of the regulatory history of both movements, examining the legal intersections that may exist across them. Prof. Abate draws on the talents of 22 experts in their fields from academia, non-profits, and the legal profession to examine the ways in which animal rights and welfare law can benefit from environmental law. The chapters address various contexts and perspectives from U.S. law, foreign domestic law, and international law on substantive issues including climate change, international trade and the environment, concentrated animal feeding operations, invasive species, lead pollution, and fisheries management, and procedural issues including standing and damages. The book concludes with two chapters that offer a vision for the future regarding how animal law can learn from environmental law and how the two movements can better coordinate their common objectives.

The Routledge Intermediate Polish Reader Rowman & Littlefield
Practical options pricing for better-informed investment decisions. The Heston Model and Its Extensions in VBA is the definitive guide to options pricing using two of the derivatives industry's most powerful modeling tools—the Heston model, and VBA. Light on theory, this extremely useful reference focuses on implementation, and can help investors more efficiently—and accurately—exploit market information to better inform investment decisions. Coverage includes a description of the Heston model, with specific emphasis on equity options pricing and variance modeling. The book focuses not only on the original Heston model, but also on the many enhancements and refinements that have been applied to the model, including methods that use the Fourier transform, numerical integration schemes, simulation, methods for pricing American options, and much more. The companion website offers pricing code in VBA that resides in an extensive set of Excel spreadsheets. The Heston model is the derivatives industry's most popular stochastic volatility model for pricing equity derivatives. This book provides complete guidance toward the successful implementation of this valuable model using the industry's ubiquitous financial modeling software, giving users the understanding—and VBA code—they need to produce option prices that are more accurate, and volatility surfaces that more closely reflect market conditions. Derivatives pricing is often the hinge on which profit is made or lost in financial institutions, making accuracy of utmost importance. This book will help risk managers, traders, portfolio managers, quants, academics and other professionals better understand the Heston model and its extensions, in a writing style that is clear, concise, transparent and easy to understand. For better pricing accuracy, The Heston Model and Its Extensions in VBA is a crucial resource for producing more

accurate model outputs such as prices, hedge ratios, volatilities, and graphs.

This book presents a comprehensive set of tools for assessing the linguistic abilities of bilingual children. It aims to disentangle effects of bilingualism from those of Specific Language Impairment (SLI), making use of both models of bilingualism and models of language impairment.

Race, Gender and Contemporary International Labor Migration Regimes Emerald Group Publishing

This volume examines how gender shapes the varying and intersecting dynamics of informal/precarious worker struggles in two gender-typed sectors - domestic work and construction. Drawing upon cases across the global North and South, it explores how gender is intertwined into collective organizing efforts, why gender is addressed and to what end.

Neural Networks for Pattern Recognition Vandenhoeck & Ruprecht
Migrant workers around the world are subject to exploitative labor practices that give employers extraordinary bargaining power.

This book brings together researchers, practitioners, and advocates who explore the many ways that contracted migrant workers are rendered vulnerable in the workplace. In this book, the term '21st-century coolie' is deployed as a heuristic device that foregrounds the deeply unequal structures shaping the transnational flows of short-term, migrant workers. The term 'coolie' harkens back to the labor arrangements of earlier centuries that involved conscripted labor, indentured servitude, and contract labor across national borders. Like those of past centuries, today's 'coolies' are subject to legal constraints inside and outside the employment relationship that force them into subjugated positions within the workplace.

Verbal Behavior Analysis John Wiley & Sons

Assessing Multilingual Children Springer

Verbal Behavior Analysis describes newly identified tools to provide verbal capabilities to children who have language delays or who lack language. This book assists teachers and parents in their efforts to help children produce novel and spontaneous verbal functions, acquire language incidentally, and become socially verbal. This book responds to the large demand for effective language development tools for children with no language and severe language delays related to autism and other disabilities by providing practitioners with the means to advance verbal development. Step-by-step protocols describe how to move children from pre-listeners to listeners, non-speakers to speakers, speakers to readers and writers, and from non-social to socially verbal individuals. The procedures are derived from numerous experiments and applications with children in three countries, and are based on Skinner's (1957) theory of language function and on research findings that extended the theory to verbal development. The authors synthesize research published across several different journals, including many new findings, in ways that provide readers with the current state of the science of verbal behavior and its application to children with real needs. While the book emphasizes the vocal production of speech, the procedures are applicable to all forms of language (signs, pictures, voice-generating devices). The book includes an extensive glossary of terms from behavior analysis and verbal behavior analysis. The instructor's manual provides a course outline, quizzes, and protocols for training professionals to use the procedures with fidelity in applied settings. If you are a professor accustomed to receiving review copies, we regret that due to the limited number of appropriate courses we are unable to provide review copies of this title.

ICSBE 2018 Farrar, Straus and Giroux

In the late 1990s and early 2000s a wave of Ponzi schemes swept through Papua New Guinea, Australia, and the Solomon Islands. The most notorious scheme, U-Vistract, attracted many thousands of investors, enticing them with promises of 100 percent interest to be paid monthly. Its founder, Noah Musingku, was a charismatic leader who promoted the scheme as a form of Christian mission and as the basis for establishing an independent kingdom. *Fast Money Schemes* uses in-depth interviews with investors, newspaper accounts, and participant observation to understand the scheme's appeal from the point of view of those who invested and lost, showing that organizers and investors alike understood the scheme as a way of accessing and participating in a global economy. John Cox delivers a “post-village” ethnography that gives insight into the lives of urban,

middle-class Papua New Guineans, a group that is not familiar to US readers and that has seldom been a focus of anthropological interest. The book's concern with understanding the interweaving of morality, finance, and aspirations shared by a global cosmopolitan middle class has wide resonance beyond studies of Papua New Guinea and anthropology.

Do Less, Live More, Get Accepted What if getting into your reach schools didn't require four years of excessive A.P. classes, overwhelming activity schedules, and constant stress? In *How to Be a High School Superstar*, Cal Newport explores the world of relaxed superstars—students who scored spots at the nation's top colleges by leading uncluttered, low stress, and authentic lives. Drawing from extensive interviews and cutting-edge science, Newport explains the surprising truths behind these superstars' mixture of happiness and admissions success, including: · Why doing less is the foundation for becoming more impressive. · Why demonstrating passion is meaningless, but being interesting is crucial. · Why accomplishments that are hard to explain are better than accomplishments that are hard to do. These insights are accompanied by step-by-step instructions to help any student adopt the relaxed superstar lifestyle—proving that getting into college doesn't have to be a chore to survive, but instead can be the reward for living a genuinely interesting life.

Feminism and the Servant Problem John Wiley & Sons

This book introduces students to African-American innovators and their contributions to art, entertainment, sports, politics, religion, business, and popular culture. While the achievements of such individuals as Barack Obama, Toni Morrison, and Thurgood Marshall are well known, many accomplished African Americans have been largely forgotten or deliberately erased from the historical record in America. This volume introduces students to those African Americans whose successes in entertainment, business, sports, politics, and other fields remain poorly

understood. Dr. Charles Drew, whose pioneering research on blood transfusions saved thousands of lives during World War II; Mae Jemison, an engineer who in 1992 became the first African American woman to travel in outer space; and Ethel Waters, the first African American to star in her own television show, are among those chronicled in *Forgotten African American Firsts*. With nearly 150 entries across 17 categories, this book has been carefully curated to showcase the inspiring stories of African Americans whose hard work, courage, and talent have led the course of history in the United States and around the world. *Mindware* RTI Press
