Bull sharks are one of the few species of sharks that can live in freshwater. Sometimes, they are found hundreds of miles from coasts! In this exciting title, young readers will learn about the habitat, appearance, and behaviors of this aggressive shark. Vivid photos and visual features including a range map, size comparison, and diet feature reinforce the leveled text.

Bull Sharks Ashok Yakkaldevi

"I Love Freshwater Sharks This funny, cute and adorable Freshwater Sharks journal notebook can be used as a daily journal, a gardening notebook, a place to write your favorite thoughts and sketches! This 8.5" x 11" Freshwater Sharks Fish journal and notebook journal is lined with journal paper with date line and features 132 pages! Features a soft cover and is bound so pages don't fall out, while it can lay flat for any writing that need more space. Great to take with you to class, school, office, coffee shop or leave on your bed stand! May Your Days be Full of Bright and Inspiring Creatures!"

[Migration of Freshwater Fishes](#) Mason Crest Publishers

Describes the ecology of important elements of southern Australian sub-tidal reef flora and fauna, and the underlying ecological principles.

Freshwater Sharks Bellwether Media

Greg Skomal is one of the world’s leading shark experts: many thousands of viewers know him as the “Shark Guy” on Discovery Channel and he’s affiliated with the Woods Hole Oceanographic Institute. So if you’re dreaming of swimming with sharks, there’s no one better to take you—and that’s exactly what he does in this comprehensive, stunning field guide. In addition to an awesome gatefold poster of a Great White (with all its distinguishing features shown in detail), plus amazing original images from Skomal and award-winning National Geographic photographer Nick Caloyianis, it contains a complete listing of every known shark in existence as well as some extinct species. Learn about sharks from their birth to death, their anatomy, how to distinguish one shark from the next, how their teeth are developed, how they hunt and attack, and their importance and purpose within our eco system.

The Biology of Sharks and Rays Capstone

Readers will love learning about the bull shark, which is considered to be the most dangerous shark in the world. Aggressive and able to live in both salt water and freshwater, these sharks are both incredible and deadly. This book will introduce readers to bull shark behavior, diet, and anatomy, as well as their fearsome hunting habits. Exciting text and color photographs are sure to hook even the most reluctant reader. A graphic organizer of fascinating facts about bull sharks presents further information in a memorable way.

[Sharks and Other Fish](#) Simon and Schuster

Everything you need to know about keeping sharks and shark fish as pets in your home aquarium. Guaranteed to answer all your questions and more, a must have guide for anyone passionate about sharks and shark fish. Includes shark and shark fish care, aquariums and tanks, pet shark species, feeding, diet, health, sharks to avoid, breeding, water chemistry and maintenance. The book is written in an easy and understandable style. In a straight forward, no nonsense fashion, Alex Halton covers all aspects of keeping sharks and shark fish in your home aquarium. The book is full of sound advice to answer all your questions.

Sharks: Conservation, Governance and Management John Wiley & Sons

The Darwin Elasmobranch Biodiversity Conservation and Management project in Sabah held a three-day international seminar that included a one-day workshop in order to highlight freshwater and coastal elasmobranch conservation issues in the region and worldwide, to disseminate the result of the project to other Malaysian states and countries, and to raise awareness of the importance of considering aspects of elasmobranch biodiversity in the context of nature conservation, commercial fisheries management, and for subsistence fishing communities. These proceedings contain numerous peer-reviewed papers originally presented at the seminar, which cover a wide range of topics, with particular reference to species from freshwater and estuarine habitats. The workshop served to develop recommendations concerning the future prospects of elasmobranch fisheries, biodiversity, conservation and management. This paper records those conclusions, which highlight the importance of elasmobranchs as top marine predators and keystone species, noting that permanent damage to shark and ray populations are likely to have serious and unexpected negative consequences for commercial and subsistence yields of other important fish stocks.

Spokane and Coeur D'Alene Freshwater Shark Attacks CRC Press

The key aim of this book is to explore the global conservation and management of sharks. There has been a rapid decline in populations of many shark species, while new science has emerged of the critical role they play in marine ecosystems. However, the authors show that conservation law and policy have been slow to develop, with only a small number of iconic species being protected worldwide. The increase in fishing impact – primarily through shark finning and by-catch - has led to shark conservation receiving greater international attention in recent years. The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their

conservation and management. Recent trends are analysed, including shark finning bans that have been put in place in several countries, the widening number of nations establishing shark sanctuaries and the growth of shark-based tourism. The efficacy of current listing processes for endangered species and fisheries regulations is also examined. Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed. Contributors include leading authorities from universities and conservation organizations in North America, Europe and Australia. A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter-disciplinary research and management approaches that are necessary to address the decline in sharks.

Tooth and Claw Chronicle Books

Spokane and Coeur d'Alene Freshwater Shark Attacks both spoofs and gives the real history of 37 landmarks in the Spokane and Coeur d'Alene area. The main focus is a nutty, absurd account of how these well-known landmarks came to be. For example, the 2 huge, cylindrical brick structures in downtown Spokane were silos for launching space missions until NASA moved to Cape Canaveral in the late 1960s. The US Navy submarine that surfaced in a field in the Spokane Valley in the 1950s - it was exploring the underground aquifer from its Lake Pend Oreille base, and the crew mistakenly thought they were at a lake. Because Lake Coeur d'Alene was originally a bay on the Pacific Ocean, it teems with marine life and supplies area restaurants with sushi and seafood. As well, a remnant population of great white sharks is responsible for several vicious attacks every year. Following each absurd account, a brief, real history is given, allowing readers peace of mind that many of our apparent hazardous, favorite places really aren't that way. At 84 pages (16,500 words) and with photos for each landmark, this book can be read in an afternoon.

Let's Learn About... Sharks - Amazing Pictures and Facts about SharksHave your children ever wondered EXACTLY how sharks sleep? There are so many awesome things to learn about sharks. What is a baby shark called? How long can they live? In this book you'll find answers to these questions and many more in simple, fun language. Each fact is accompanied by incredible pictures to keep even the youngest child fascinated. In school our children aren't taught in a way that makes them curious and want to learn. I want to change that!This book will show your children just how interesting the world is and help excite a passion for learning.Your children will learn how to: Become curious about the world around them Find a motivation to learn Use their free time to discover more about the world - and have fun while doing so! And much more!Table of ContentsChapter 1 - What sharks look likeChapter 2 - Where sharks liveChapter 3 - Freshwater sharksChapter 4 - What sharks eatChapter 5 - HuntingChapter 6 - Social LifeChapter 7 - How sharks sleepChapter 8 - Baby sharksChapter 9 - The life of a sharkChapter 10 - Endangered sharksChapter 11 - Great white sharkChapter 12 - Whale sharkChapter 13 - Hammerhead sharkChapter 14 - Mako sharkChapter 15 - Bull sharkChapter 16 - Tiger sharkChapter 17 - Greenland sharkChapter 18 - Saw sharkChapter 19 - Pygmy sharkChapter 20 - River shark Buy this book for your children today and give them one of the greatest gifts you possibly could - the gift of wonder!

Sharks of the Shallows JHU Press

People will see different creatures in an ocean than they will in a lake. The difference is the amount of salt in the water each creature needs to survive. This book outlines the difference between such creatures, provides a quiz to test a student’s knowledge, and details the creatures that can live in both environments.

Bull Sharks Capstone

A marvelously illustrated look at the most deadly predators on the planet Tooth and Claw presents the world’s top predators as you have never seen them before, from big cats and wild dogs to sharks, reptiles, and killer whales. Blending gorgeous photos and illustrations with spellbinding storytelling, this book is packed with the latest facts about these fearsome but often misunderstood animals. It covers apex and other top predators in each major vertebrate family, discussing where and how they live, how they are faring in the modern world, and why they matter. Along the way, the authors share informative and entertaining anecdotes from their decades in the field learning about predators and reveal hard truths about the role humans continue to play in their fate. Tooth and Claw also describes conservation successes and lays out some simple but crucial steps each of us can take to protect these magnificent beasts. Are humans top predators, too? Read this amazing book and find out. Offers an unparalleled look at a side of nature rarely witnessed up close Stunningly illustrated throughout and brimming with fun facts Describes ultimate vertebrate predators ranging from sharks and reptiles to raptors, cats, dogs, bears, and marine mammals Provides rare insights into the biology, ecology, and conservation of top predators Draws on the latest findings from habitats around the world Conveys the wonders of the natural world with engaging storytelling and lively personal anecdotes

Palaeoecology, Migration Behavior, and Reproductive Pattern of Palaeozoic to Mesozoic Freshwater Sharks Revealed by Stable Isotopes JHU Press

Explore the latest science about sharks. Did you know that some sharks have friends? Or that there are sharks small enough to swim in a soup can? There are sharks who can walk on land and others who make their own light. There are ancient sharks who lived in the oceans millions of years ago, and new species who have just been discovered. Most importantly, did you know that most sharks are fighting for their survival? Sharks Forever takes a deep dive into the lives of sharks--their habitat, biology, habits and personalities. It also looks at the biggest threats to their existence, from marine pollution and overfishing to bycatch and shark-fin soup. It goes beyond the bites and shares stories about people who swim with sharks and call them friends.

Saltwater and Freshwater Creatures Explained Capstone

In dramatic pictures and simple text, readers are shown the terrifying teeth, powerful jaws, and basic senses that make Sharks some of the most fearsome on Earth. Quotes from victim encounters, as well as scientific facts, bring added information to readers in short, easy-to-read bursts. Glossary words provide additional information and understanding to the curious reader. A&D Xtreme is an imprint of Abdo Publishing, a division of ABDO.

Australian Journal of Marine and Freshwater Research Cavendish Square Publishing, LLC

They will continue to grace our coastlines only if we care enough to understand them.

Shark Handbook Cherry Lake

This important and exciting title represents the first authoritative volume focussed on pelagic (open ocean) sharks as a group. Virtually every pelagic shark expert in the world has contributed to this landmark publication which includes the latest data and knowledge on pelagic shark biology, fisheries, management, and conservation. Pelagic sharks face unprecedented levels of exploitation in all the world's oceans through both direct fisheries and by-catch, and effective management for these species is contingent upon solid science and data, which this book brings together for the first time. All those involved in shark biology will need to have a copy of this book.

Elasmobranch Biodiversity, Conservation and Management Texas Parks and Wildlife Press

One fish, two fish, red fish, nearly thirty thousand species of fish -- or fishes, as they are properly called when speaking of multiple species. This is but one of many things the authors of this fascinatingly informative book reveal in answering common and not-so-common questions about this ubiquitous group of animals. Fishes range in size from tiny gobies to the massive Ocean Sunfish, which weighs thousands of pounds. They live in just about every body of water on the planet. Ichthyologists Gene Helfman and Bruce Collette provide accurate, entertaining, and sometimes surprising answers to over 100 questions about these water dwellers, such as "How many kinds of fishes are there?" "Can fishes breathe air?" "How smart are

fishes?" and "Do fishes feel pain?" They explain how bony fishes evolved, the relationship between them and sharks, and why there is so much color variation among species. Along the way we also learn about the Devils Hole Pupfish, which has the smallest range of any vertebrate in the world; Lota lota, the only freshwater fish to spawn under ice; the Candiru, a pencil-thin Amazonian catfish that lodges itself in a very personal place of male bathers and must be removed surgically; and many other curiosities. With over 100 photographs -- including two full-color photo galleries -- and the most up-to-date facts on the world's fishes from two premier experts, this fun book is the perfect bait for any curious naturalist, angler, or aquarist.

Historical Journey Across Raritan Bay, A John Wiley & Sons

Looks at the ways in which sharks and other fish have adapted to their surroundings, and covers such topics as habitat, feeding, camouflage, defenses, and reproduction.

Bull Shark University of Chicago Press

The historic Raritan Bay stretches from Staten Island to Sandy Hook, including the beach communities of Monmouth County. With its proximity to New York City and Jersey shore attractions, the bay region has been the setting for compelling moments throughout American history. The native Lenapes harvested oysters and fished the waters along the bayshore generations before Dutch and English colonists reached their coasts. Local slave Titus Cornelius, or Colonel Tye, escaped from bondage and led Loyalist forces in raids to destabilize the area during the Revolutionary War. Steamships traversed the bay carrying hordes of vacationers from New York to newly established resorts along the "Riviera of New Jersey" in the early twentieth century. Climb aboard as author John Schneider takes readers on a historical journey across Raritan Bay.

Paleo Sharks Orca Book Publishers

Sharks are among the most ferocious predators in the oceans, but how have they, and other fish, adapted to become so successful? The series explores how some of our favorite animals are uniquely adapted to their environment. Each book looks at the various ways in which different species have adapted to their surroundings and covers habitat, defenses, camouflage, and the way animals find food.
