MATTEO LOGAN

Spon's Architect's and Builders' Price Book 2016 CRC Press

Die deutsche Bauwirtschaft kommt mit dem ausländischen Baugeschehen zweifach in Ber- rung: Einerseits plant und baut sie direkt oder über Tochter- und Beteiligungsunternehmen im Ausland. Andererseits kommen ausländische Unternehmen und Bauherren nach Deutschland und erbringen hier Planungs- und Bauleistungen beziehungsweise lassen diese hier erbringen. Das vorliegende Buch will Hilfen für beide Berührungspunkte bereitstellen. Beschrieben und den deutschen Sachverhalten gegenübergestellt werden auslandsspezifische Randbedingungen und die daraus resultierenden Denk- und Vorgehensweisen ausländischer Baufachleute und Bauherren. Der gewählte, griffige Buchtitel „Auslandsbau“ trifft demnach den Buchinhalt nur näherungsweise. Zutreffender wäre „Grenzüberschreitendes Bauen“, was aber etwas holprig klingt, oder „Bauen mit Ausländern“, was mit hoher Wahrscheinlichkeit völlig falsch gedeutet würde. Eine „weltumfassende“ Beschreibung des Auslandsbaus ist nicht leistbar! Das Buch - schränkt sich deshalb auf die aus deutscher Sicht bedeutsamen britischen, internationalen und französischen Regelwerke und zeigt grundlegende strukturelle und rechtliche Unterschiede auf. Es will für typische auslandsspezifische Besonderheiten sensibilisieren und damit helfen, Missverständnisse und Fehlinterpretationen in der Zusammenarbeit mit ausländischen Kol- gen und Bauherren zu vermeiden oder zu vermindern. Entstanden ist das Buch aus langjähriger Tätigkeit in einem international tätigen Bauunt- nehmen sowie aus auslandsbezogenen Lehrveranstaltungen in Bauingenieur-Studiengängen der FH Mainz. Es ist als Einführung in den Auslandsbau gedacht und richtet sich an zwei Zi- gruppen: Erstens an Studierende der an den Hochschulen angebotenen international ausgeri- teten Lehrveranstaltungen und Studiengänge. Zweitens an bereits im Berufsleben stehende Baufachleute, die beim Zusammenwachsen der Baumärkte mit dem Ausland oder Ausländern in Berührung kommen.

Estimating and Tendering for Construction Work Routledge

Estimators need to understand the consequences of entering into a contract, often defined by complex conditions and documents, as well as to appreciate the technical requirements of the project. *Estimating and Tendering for Construction Work*, 5th edition, explains the job of the estimator through every stage, from early cost studies to the creation of budgets for successful tenders. This new edition reflects recent developments in the field and covers: new tendering and procurement methods the move from basic estimating to cost-planning and the greater emphasis

placed on partnering and collaborative working the New Rules of Measurement (NRM1 and 2), and examines ways in which practicing estimators are implementing the guidance emerging technologies such as BIM (Building Information Modelling) and estimating systems which can interact with 3D design models With the majority of projects procured using design-and-build contracts, this edition explains the contractor's role in setting costs, and design statements, to inform and control the development of a project's design. Clearly-written and illustrated with examples, notes and technical documentation, this book is ideal for students on construction-related courses at HNC/HND and Degree levels. It is also an important source for associated professions and estimators at the outset of their careers.

Drawing on a wealth of practical experience, both in the construction industry and teaching students, Chris March presents this study of construction management and the major aspects of controlling the building process. Covering the stages from the client's initiation, to the final handover of the building, March includes evidence from those currently working in the industry, and covers the key industry requirements: knowing that in today's market place, those entering the field must be aware of how projects are financed and controlled, and to financially run and maintain a building. Finance and Control for Construction examines the various stages, from development, through the design, to procurement and post-contract processes, and culminates in a discourse on facilities management. This book is written with a down-to-earth approach, with evidence supporting theories and principles, and is a book that students of construction management and related subjects need if they wish to succeed in the field.

Strong output demand over the last year has stretched the industry. The issues are being felt by all firms across the delivery chain – from clients to subcontractors. Capacity constraints almost always manifest themselves in prices. Increased tender prices have become the primary symptom of these supply-side issues. The main driver of new work output growth over the last 18 months is slowing. Both the public and private housing sectors are quickly reversing all of their recent upward trends when looked at on a yearly growth basis. The counterpoint to this is that the yearly growth figures are still positive, meaning that new work continues to flow. SPON'S ARCHITECTS' AND BUILDERS' PRICE BOOK 2016, compiled by AECOM, still provides the most accurate, detailed and professionally relevant construction price information for the UK. Its unique Tender Index, updated through the year, gives an ongoing reality check and allows you to adjust for changing market conditions. Although it suits a wide range of project sizes, this is the only price book which sets out a detailed cost base for contracts exceeding £3,500,000 in value. Use the access code inside the front cover of the book to get set up with internet access to this 2016 edition until the end of December 2016. We now provide SPON'S Online, a versatile and powerful online data viewing package -- online or offline on your PC/Mac, smartphone or tablet. You can browse and search the content across all the price

Major changes have been made to this 141st edition: For the first time, plant prices have been separated out in the measured works section. Construction prices rose over the last year by 5%, according to AECOM's tender price index, with construction price inflation continuing to run above the long-run average. The main drivers are rising input costs. Producer price indices have moved up at a clip in recent quarters, with sharp increases in prices for materials and fuels consumed by UK manufacturers. Demand- and supply-side factors make the probability of short-term price falls very slim. SPON'S ARCHITECTS' AND BUILDERS' PRICE BOOK 2018, compiled by AECOM, still provides the most accurate, detailed and professionally relevant construction price information for the UK. Building Measurement CRC Press

Willis's Elements of Quantity Surveying has become a standard text in the teaching of building measurement - a core part of the curriculum for quantity surveyors. Particularly in the latter editions it has eclipsed the other books on building measurement, partly because of the heritage, but mostly because of the logical approach and copious use of examples to guide the student. The new 11th

edition has been fully updated to recognise the introduction of the New Rules of Measurement (NRM) by the Royal Institution of Chartered Surveyors (RICS), which reflect the way the modern QS works and provide a standard set of measurement rules that are understandable by all those involved in a construction project. A range of factors are all combining to propel input cost inflation. Higher international logistics costs, returning demand from industry workload, and higher global metals prices are some of the ingredients to quicker building cost inflation. Whilst some EU materials exporters to the UK are adjusting to Brexit, other EU exporters - initially smaller or specialist firms hit proportionally harder - are now deciding not to supply the UK at all, because the additional red tape involved makes it not commercially viable. If this trend replicates across the whole EU to UK supply chain, visible disruption and higher prices are likely until other sources of supply begin to increase in volume and step in to address these supply issues. Among other exporters continuing to supply the UK, significant price increases are being applied to cover the permanent Brexit non-tariff barriers and additional administrative processes. SPON'S ARCHITECTS' AND BUILDERS' PRICE BOOK 2022, compiled by AECOM, still provides the most accurate, detailed and professionally relevant construction price information for the UK. Willis's Elements of Quantity Surveying CRC Press

This authoritative text provides a detailed insight into how construction companies manage their finances at both corporate and project level. It will guide students and practitioners through the complexities of the financial reporting of construction projects within the constraints of accepted accounting practice. The book is written for non-accountants and from a contractor's perspective and is equally relevant to subcontractors and main contractors. The authors examine the relationship between the external annual accounts and the internal cost-value reconciliation

process. CVR is covered in depth and the authors consider issues such as interim payments, subcontract accounts, contractual claims, final accounts, cash flow management and the reporting of the physical and financial progress of contracts. A broad perspective of all the financial aspects of contracting is taken along with related legal issues and the authors explain how things operate in the 'real world'. They describe good practice in financial control while at the same time being honest about some of the more questionable practices that can - and do - happen. The approach taken is unique as the financial management of construction projects is considered from the perspective of the contractor's quantity surveyor. The book deals with the real issues that surveyors have to address when using their judgment to report turnover, profitability, cash flow, and work in progress on projects and the financial problems faced by subcontractors are frankly and pragmatically explored. The payment and notice requirements of the Construction Act are explained in detail and relevant provisions of JCT2011, NEC3, ICC, DOM/1 and other standard contracts and subcontracts are also covered. Financial Management in Construction Contracting addresses the wide variety of external factors that influence how construction companies operate, including government policy, banking covenants and the financial aspects of supply chain management. Cost reporting systems are described and real-life examples are used to illustrate cost reports, accrual systems and how computerised systems can be employed to provide the QS with information that can be audited. Examples drawn from practice demonstrate how work-in-progress (WIP) is reported in contracting. Cost value reconciliation reports are featured and the book demonstrates how adjustments are made for overmeasure, undermeasure, subcontract liabilities and WIP as well as explaining the processes that contractors use when analysing external valuations. This is the ideal core text for final year degree and post-graduate level modules on Quantity Surveying, Commercial Management, Construction Management and Project Management courses and will provide an invaluable source of reference for quantity surveyors and others who may be engaged in the financial management of construction projects. The book's companion website at www.wiley.com/go/rossfinancialmanagement offers invaluable resources for students and lecturers as well as for practising construction managers: end-of-chapter exercises + outline answers PowerPoint slides for each chapter ideas for discussion topics links to useful websites

Building Measurement CRC Press

Planning, Measurement and Control for Building is an easy to read textbook that provides an overview of the process by which building projects are planned, priced and controlled. Using three specific case studies (a speculative housing project, a small shop refit and a prestigious commercial development) the book illustrates the importance of the 'paperwork' side of the construction process, and shows how the various elements of design, estimating, tendering, and building contracts combine to deliver a successful project that meets the needs of clients and the appropriate regulations.
