NBS Monograph CRC Press

For four centuries, the Camp Ashaninkas of the Peruvian Amazon have fought for their identity and independence in the face of Spanish colonialism and Peruvian national expansionism. Stefan Varese

wrote about the Campa Ashaninkas in the mid-1960s, after three seasons of field research among them and three years of archival research. He titled his book *La Sal de Los Cerros*, after the invaded Mountain of Salt that had been the center of Campa Ashaninka trade and power for millennia. *Salt of the Mountain* makes Varese's classic work of anthropology available in English for the first time, updated with a new preface and introduction by the author. Varese conducted his research with an explicit commitment to letting the Campa Ashaninkas speak for themselves. Using their myths and cosmological interpretations as source material, Varese presents new readings of both colonial Spanish and modern Peruvian documents relating to the tribe. He

chronicles the relentless success of European geographic annexation and the continuing failure of European cultural assimilation. Living among the Campa Ashaninkas, Varese found that their worldview rejects the modern notion that assimilation is inevitable, and he developed a deep respect for their fiercely independent spirit. For this reason, he calls his work an "approximation" rather than a description or history.

**Canadian Journal of Botany** American Geophysical Union

This proceedings volume contains a collection of 20 papers from the following symposia held during the 2015 Materials Science and Technology (MS&T '15) meeting: 7th International Symposium on Green and Sustainable

Technologies for Materials Manufacturing  
Processing Materials for Nuclear  
Applications and Extreme Environments  
Materials Issues in Nuclear Waste  
Management in the 21st Century  
Nanotechnology for Energy, Healthcare  
and Industry Materials for Processes for  
CO2 Capture, Conversion and  
Sequestration Hybrid Organic - Inorganic  
Materials for Alternative Energy  
**Texoma Group Salt Domes, SPR (LA,  
TX)** Springer Science & Business Media  
This NATO Advanced Research Workshop  
was devoted to a specialized topic in  
molten salt chemistry and was held in an  
exotic location (as far as Westerners  
were concerned) well within the Arctic  
Circle. It nevertheless facilitated a  
fruitful week, both of science and  
of human contacts. The 42 oral

presentations and posters from nine  
countries enabled the 59 participants to  
learn a great deal about many areas of  
recent research in the molten salt  
chemistry of refractory metals, while  
making new contacts as well as  
renewing old friendships. The time  
of informal contact led to the  
beginning of a number of new research  
cooperations with  
interchange of personnel. Thus the twin  
aims of advancing science and improving  
East-West understanding were both  
amply fulfilled. Indeed a warm and  
happy family atmosphere was very  
tangible both during the scientific  
sessions and the social events, which  
participants, accompanying persons and  
local staff all enjoyed. This opportunity of  
living for a short time within the Arctic

Circle was a novelty for most Westerners, who generally appreciated the very warm weather (the hottest for 20 years according to some residents), as well as the beautiful surroundings of very green birch/pine forest, rushing rivers, vast lakes and rounded mountains, frequently illuminated by wonderful sunsets. The evening barbeque beside Lake Imandra (100 km long) and the coach tour beside the beautiful White Sea dotted with islands in the Kandalaksha Recreational Area (National Park), to sample Pomor culture, dancing and fresh salmon soup, were high spots of the social programme. *In Search of Salt* John Wiley & Sons

Rock salt formations have long been recognized as a valuable resource - not only for salt mining but for construction

of oil and gas storage caverns and for isolation of radioactive and other hazardous wastes. Current interest is fast expanding towards construction and re-use of solution-mined caverns for storage of renewable energy in the form of hydrogen, compressed air and other gases. Evaluating the long term performance and safety of such systems demands an understanding of the coupled mechanical behavior and transport properties of salt. This volume presents a collection of 60 research papers defining the state-of-the-art in the field. Topics range from fundamental work on deformation mechanisms and damage of rock salt to compaction of engineered salt backfill. The latest constitutive models are applied in computational studies addressing the

evolution and integrity of storage caverns, repositories, salt mines and entire salt formations, while field studies document ground truth at multiple scales. The volume is structured into seven themes: Microphysical processes and creep models Laboratory testing Geological isolation systems and geotechnical barriers Analytical and numerical modelling Monitoring and site-specific studies Cavern and borehole abandonment and integrity Energy storage in salt caverns The Mechanical Behavior of Salt X will appeal to graduate students, academics, engineers and professionals working in the fields of salt mechanics, salt mining and geological storage of energy and wastes, but also to researchers in rock physics in general.

**Index-catalogue of the Library of the Surgeon-general's Office, United States Army** Newnes

A unique opportunity to review the latest progress in an expanding area of interest: the Mechanical Behaviour of Salt. These Proceedings include over fifty papers and summaries describing the latest findings in ongoing studies from a number of research groups. For the 2007 conference, there was a particular focus on the understanding of thermal, mechanical, hydraulic and chemical coupled processes (THMC). Such processes are of specific interest when considering advanced problems in waste disposal, storage and mining. The book includes a number of themes: - laboratory and in-situ investigations modelling, e.g. derivation of constitutive

equations - numerical computations and prediction of long-term behaviour - THMC processes in mining projects, storage and permanent disposal - case studies - geology - mining and storage applications and abandonment The International Conferences on the Mechanical Behaviour of Salt have a long tradition, being initiated in 1981 at The Pennsylvania State University, USA. The present conference, the sixth of the series, took place in Hannover, Germany, in May 2007. The conference brought together mining engineers, researchers, and university professors interested in the mechanical behaviour of salt, mostly from Europe and beyond. Removal of Soot from Furnaces and Flues by the Use of Salts Or Compounds  
The Electrochemical Society

This publication is composed of papers presented at an International Symposium on Athalassic (Inland) Salt Lakes, which was hosted by the University of Adelaide, South Australia, during a week in October 1979. The genesis of the Symposium was at the Copenhagen Congress of the International Association of Limnology (S.I. L.) where it was noted that a number of papers concerned with inland saline lakes were distributed throughout sessions in such a way as to make it difficult to attend all of them. A number of participants at the Congress felt that the ecology of salt lakes had greater homogeneity or cohesiveness than this sort of distribution would suggest, and it was decided that a symposium on salt lakes be held. The symposium was the

first under the aegis of the S.I. L. to be held in Australia, and it was very well attended, with participants coming from many countries. The week long programme produced a number of lively and interesting sessions on all aspects of athalassic saline lakes. Participants stayed on after the Symposium for an expedition to Lake Eyre, in the nQrth of South Australia, and were given one of the best of all possible introductions to the Australian environment.

*Energy Research Abstracts* John Wiley & Sons

Semiannual, with semiannual and annual indexes. References to all scientific and technical literature coming from DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-

sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies; Biomedical sciences, applied studies; Health and safety; and Fusion energy. Entry gives bibliographical information and abstract. Corporate, author, subject, report number indexes.

Délibérations Et Mémoires de la Société Royale Du Canada Springer Nature

Summary: Discusses coastal sand dune, shingle beach, and salt marsh ecosystems, communities based upon relatively unconsolidated granular deposits which frequently rest upon solid rock or, much more rarely, on peat.

**Refractory Metals in Molten Salts**

Springer Science & Business Media

Technical contributions contained in this

volume characterize continuity of science, engineering and modeling regarding the mechanical behavior of salt. These papers evidence relationships from microscopic dislocation structure to modeling applications over kilometer dimensions, a reach of more than ten orders of magnitude. The book is arranged also *Hammond's Modern Atlas of the World* Cambridge University Press Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 152. Sea salt aerosol (SSA) exerts a major influence over a broad reach of geophysics. It is important to the physics and chemistry of the marine atmosphere and to marine geochemistry and biogeochemistry generally. It affects visibility, remote

sensing, atmospheric chemistry, and air quality. Sea salt aerosol particles interact with other atmospheric gaseous and aerosol constituents by acting as sinks for condensable gases and suppressing new particle formation, thus influencing the size distribution of these other aerosols and more broadly influencing the geochemical cycles of substances with which they interact. As the key aerosol constituent over much of Earth's surface at present, and all the more so in pre-industrial times, SSA is central to description of Earth's aerosol burden.

*Chemical Abstracts* Berghahn Books Reviews the science and engineering of high-temperature corrosion and provides guidelines for selecting the best materials for an array of system

processes High-temperature corrosion (HTC) is a widespread problem in an array of industries, including power generation, aerospace, automotive, and mineral and chemical processing, to name a few. This book provides engineers, physicists, and chemists with a balanced presentation of all relevant basic science and engineering aspects of high-temperature corrosion. It covers most HTC types, including oxidation, sulfidation, nitridation, molten salts, fuel-ash corrosion, H<sub>2</sub>S/H<sub>2</sub> corrosion, molten fluoride/HF corrosion, and carburization. It also provides corrosion data essential for making the appropriate choices of candidate materials for high-temperature service in process conditions. A form of corrosion that does not require the presence of liquids, high-

temperature corrosion occurs due to the interaction at high temperatures of gases, liquids, or solids with materials. HTC is a subject of increasing importance in many areas of science and engineering, and students, researchers, and engineers need to be aware of the nature of the processes that occur in high-temperature materials and equipment in common use today, especially in the chemical, gas, petroleum, electric power, metal manufacturing, automotive, and nuclear industries. Provides engineers and scientists with the essential data needed to make the most informed decisions on materials selection Includes up-to-date information accompanied by more than 1,000 references, 80% of which from within the past fifteen years Includes

details on systems of critical engineering importance, especially the corrosion induced by low-energy radionuclides. Includes practical guidelines for testing and research in HTC, along with both the European and International Standards for high-temperature corrosion engineering. Offering balanced, in-depth coverage of the fundamental science behind and engineering of HTC, *High Temperature Corrosion: Fundamentals and Engineering* is a valuable resource for academic researchers, students, and professionals in the material sciences, solid state physics, solid state chemistry, electrochemistry, metallurgy, and mechanical, chemical, and structural engineers.

**The Mechanical Behavior of Salt - Understanding of THMC Processes**

**in Salt** University of Oklahoma Press  
This book offers a new ecosystemic approach to the understanding of mangrove and salt marsh ecosystems. Brazil has one of the largest areas of mangroves in the world, where salt marshes might or might not be associated. Different landscapes comprise the extensive coastline, where mangrove and salt marsh species' composition is discussed through the analysis of physiography, zonation, and succession processes. Both salt marsh and mangrove plants and the associated macroalgae will be characterized in their ecophysiological and phenological aspects, as well as genetic and epigenetic diversity. The chapters on microbial diversity and litterfall expose the well-known importance of these

ecosystems as highly productive carbon sinks and pumps. The associated fauna of invertebrates (benthic meio and macrofaunas, especially brachyuran crabs) and vertebrates (fishes, birds, and mammals) are presented in a special section. The conservational approach encompasses issues, such as historical ecology, economic valuation, protected areas, environmental education, climate changes, and adaptive management.

### **High Temperature Corrosion**

Archaeopress Publishing Ltd

Molten salts and fused media provide the key properties and the theory of molten salts, as well as aspects of fused salts chemistry, helping you generate new ideas and applications for fused salts. Molten Salts Chemistry: From Lab to Applications examines how the

electrical and thermal properties of molten salts, and generally low vapour pressure are well adapted to high temperature chemistry, enabling fast reaction rates. It also explains how their ability to dissolve many inorganic compounds such as oxides, nitrides, carbides and other salts make molten salts ideal as solvents in electrometallurgy, metal coating, treatment of by-products and energy conversion. This book also reviews newer applications of molten salts including materials for energy storage such as carbon nano-particles for efficient super capacitors, high capacity molten salt batteries and for heat transport and storage in solar plants. In addition, owing to their high thermal stability, they are considered as ideal

candidates for the development of safer nuclear reactors and for the treatment of nuclear waste, especially to separate actinides from lanthanides by electrorefining. Explains the theory and properties of molten salts to help scientists understand these unique liquids Provides an ideal introduction to this expanding field Illustrated text with key real-life applications of molten salts in synthesis, energy, nuclear, and metal extraction

Mechanical Behaviour of Salt VIII CRC Press

The study of salt from an anthropological perspective provides a holistic view of its role in the evolution of human communities. Studies from around the world, ranging from prehistory to modern times, are here organized into 6

sections: theory, archaeology, history, ethnography/ethnoarchaeology/ethnohistory, linguistics, and literature.

Polymers Springer

Scientific and Commercial Information for More Than 1,000 Polymers Polymers: A Property Database, Second Edition offers a central and reliable source for scientific and commercial information on more than 1,000 polymers. Revised and updated throughout, this edition features 25% new material, including 50 entirely new entries that reflect advances in areas such as conducting polymers, hydrogels, nano-polymers, and biomaterials. The second edition also comes with unlimited access to a complete, fully searchable Web version of the reference. Powerful retrieval

software allows users to customize their searches and refine results. Each entry includes trade names, properties, manufacturing processes, commercial applications, supplier details, references, and links to constituent monomers. Buy the latest print edition and gain access to a complete, fully searchable Web version of the reference, enhanced with powerful retrieval software that allows you to customize searches and refine results. Unlimited access to the Online Version for the lifetime of the Second Edition Revised, Updated, and Expanded with 25% New Material Includes 50 entirely new entries reflecting the latest polymer advances Special Introductory Price! Buy today and SAVE! Purchase the NEW Edition in Print AND Online -For One Price!

Salt tectonics is the study of how and why salt structures evolve and the three-

dimensional forms that result. A fascinating branch of geology in itself, salt tectonics is also vitally important to the petroleum industry. Covering the entire scale from the microscopic to the continental, this textbook is an unrivalled consolidation of all topics related to salt tectonics: evaporite deposition and flow, salt structures, salt systems, and practical applications. Coverage of the principles of salt tectonics is supported by more than 600 color illustrations, including 200 seismic images captured by state-of-the-art geophysical techniques and tectonic models from the Applied Geodynamics Laboratory at the University of Texas, Austin. These combine to provide a cohesive and wide-ranging insight into this extremely visual subject. This is the

definitive practical handbook for professional geologists and geophysicists in the petroleum industry, an invaluable textbook for graduate students, and a reference textbook for researchers in various geoscience fields. Molten Salts Chemistry CRC Press

Relatively recent Bantu-speaking migrants to central Cameroon, the Beti have had an eventful history. Based on extensive interviews and traditional Beti (Fang) poetry, in addition to German and French archival sources, the author of this readable study recreates the social structure of the Beti and their self-perceptions in pre-colonial times, their disruptive encounters with first German (1880-1918) and then French (1918-1960) colonialism, until Cameroon's independence.

*Brazilian Mangroves and Salt Marshes*

'Highly recommended as a thorough examination of the commodity history of salt'-The Geographical Journal. Salt has been called the primordial addiction. It has been an object of almost universal consumption since Neolithic times. This book sets out to place the particular histories of salt in a global perspective and write the history of a human commodity as a theme in world history. From pagan man, through classical Rome, Byzantium, early Islam, the Dark Ages, the Renaissance to the modern world, the production, distribution, consumption and taxation of salt are

examined. The author shows how a history of salt cannot be separated from the histories of commerce, medicine, diet, cooking, taxation, invention and war. Although taken for granted today, salt has been of critical economic and cultural importance to countries and peoples throughout history; the instigator and catalyst to actions and events ranging from the first maritime expedition of Muslim forces to Columbus's discovery of America. After Salt and Civilization salt can not be taken for granted again.
