The Common Agricultural Policy (CAP) has been supporting the incomes of the European Union's agricultural community for half a century. Despite this, there is still no official system in place to track the economic wellbeing of farmers and their families. This book examines the evidence on the overall wealth of farming households, and concludes that in nearly all member states, they are not generally a poor sector of society, with disposable incomes that are similar to, or exceed, the national average. In this updated edition, the author discusses the latest evidence, makes recommendations for gathering better information, and considers the implications for the CAP as we enter the second decade of the 21st century.

This paper discusses Bhutan's Technical Assistance Evaluation report. Participation in the statistical projects financed by the Japanese government in national accounts, prices, government finance, and balance-of-payments statistics is having a major effect on Bhutan's statistical development. The statistical compilers were well informed about the donor as the source of funding. The method of combining regional workshops and multiple missions was considered to be particularly suitable. Cross-sectoral data consistency and coordination are increasingly recognized as important. Computerized accounting systems for the budgetary central government have been introduced, namely the Multi-Year Rolling Budget and the Public Expenditure Management System.

Brucellosis is a nationally and internationally regulated disease of livestock with significant consequences for animal health, public health, and international trade. In cattle, the primary cause of brucellosis is *Brucella abortus*, a zoonotic bacterial pathogen that also affects wildlife, including bison and elk. As a result of the Brucellosis Eradication Program that began in 1934, most of the country is now free of bovine brucellosis. The Greater Yellowstone Area (GYA), where brucellosis is endemic in bison and elk, is the last known *B. abortus* reservoir in the United States. The GYA is home to more than 5,500 bison that are the genetic descendants of the original free-ranging bison herds that survived in the early 1900s, and home to more than 125,000 elk whose habitats are managed through interagency efforts, including the National Elk Refuge and 22 supplemental winter feedgrounds maintained in Wyoming. In 1998 the National Research Council (NRC) issued a report, *Brucellosis in the Greater Yellowstone Area*, that reviewed the scientific knowledge regarding *B. abortus* transmission among wildlife—particularly bison and elk—and cattle in the GYA. Since the release of the 1998 report, brucellosis has re-emerged in domestic cattle and bison herds in that area. Given the scientific and technological advances in two decades since that first report, *Revisiting Brucellosis in the Greater Yellowstone Area* explores the factors associated with the increased transmission of brucellosis from wildlife to livestock, the recent apparent expansion of brucellosis in non-feedground elk, and the desire to have science inform the course of any future actions in addressing brucellosis in the GYA.

NEWLY RELEASED UPDATED SECOND EDITION The Retirement Income Industry Association (RIIA) offers the Retirement Management Analyst (RMA) certification program to advisors who work with clients seeking the highest levels of knowledge and expertise for retirement income planning. This book explains what the RMA program consists of and how to find an advisor who provides the highest level of knowledge and expertise in the area of retirement income planning. Learn How to Use the RMA Signposts to Evaluate Advisors The framework of the RMA curriculum serves as the core of the RMA training. RIIA uses four "signposts" to summarize the RMA curriculum in a way that highlights what makes it unique. (The glossary provides detailed definitions for the key concepts in that framework.) The four signposts are: the Client Diagnostic Kit, the Retirement Allocations, the

RMA Toolbox and RMA Practice Management. The Client Diagnostic Kit and the Retirement Allocations are what make the RMA designation uniquely differentiated in the marketplace. Here is a brief overview of the four parts of the framework: The Client Diagnostic Kit firmly places the client, instead of investment products, at the center of the retirement management and retirement-planning process. Its major components are: . Measures of Fundedness (overfunded, constrained, underfunded) . Household Client Segmentation Matrix . Fundamental Planning Strategies (investment, goals and product-based planning) . Household Balance Sheet Analysis, View and Benchmarks The Retirement Allocations are risk-management allocations that demonstrate that the retirement management and planning process must start with risk management instead of asset management or financial "product allocations." This signpost includes several process and analytical steps including: . Risk Retention by the client, addressed by diversification among risky assets . Risk Management by the client, addressed by giving up future potential to limit downside losses in the future . Risk Pooling by the client, addressed by entering into personalized contracts and agreements that create pools/groups . Risk Avoidance by the client, addressed by building "cushions" of risk-free assets The RMA Toolbox includes the analytical coverage of the complete Household Balance Sheet to ensure the inclusion of all process implementation approaches, account locations and products/solutions. It categorizes all products and solutions in the framework of the Retirement Allocations. Notable features include: . Implementation Process Approaches (e.g. total return portfolios, systematic withdrawal plans, ladders, time segmentation, etc.) . Account Locations (e.g. tax diversification) . Product Selections (e.g. stocks, bonds, mutual funds, TDFs, annuities, etc.) The RMA Practice Management section summarizes the RMA curriculum framework and topic areas covered in the broader education/designation marketplace. However, it is different from other designations because of the complete practice coverage provided by the Retirement Policy Statement and by its high eligibility standards and code of ethics. Major sections include: . Ethics . Implementation . Monitoring With the RMA(r), RIIA seeks to help solve what is perhaps the greatest financial issue facing a generation of Americans: the creation of durable, inflation-adjusted retirement income that can last 30 years or more in retirement. This book helps you become an active participant in the management of your own retirement income success. NOTE FOR SECOND EDITION: This second edition adds the client-focused paper "Ah-ha Moments!" to its overall outline of the ways in which RMA's help address one of the key financial issues facing retiring Americans: the need to create durable, inflation-adjusted retirement income that can last 30 years or more in retirement."

This 2014 Article IV Consultation highlights that the GDP growth in Bhutan has slowed from about 10 percent in FY2011 (July 1–June 30) to 5 percent in FY2013. Slower growth reflects policy efforts to contain overheating pressures in the form of restrictions on credit for construction and vehicle. Inflation has remained elevated, tracking closely that of India (Bhutan's main trading partner). Social development indicators have improved steadily, and Bhutan is on track or has achieved most of its Millennium Development Goals. Growth is projected to recover to 6 1/2 percent in FY2014, driven mainly by a pick-up in hydropower-related construction activities and domestic services.

This Technical Assistance report highlights that setting up a liquidity forecasting framework would go a long way in establishing a key building block allowing the Royal Monetary Authority of Bhutan (RMA) to fulfil its legal mandate to formulate and implement monetary policy in ways better aligned with current central bank practices. The structural liquidity surplus, mainly due to foreign reserves accumulation, has been broadly stable in the absence of RMA intervention. The paper discusses that the volatility of autonomous factors and the fragmentation of the money market justify ambitious steps by the RMA towards setting up a liquidity management framework. The mission identified several constraints and gaps that need to be addressed to support the effectiveness of a liquidity forecasting framework. The mission's recommendations presented in the report aim at streamlining the processing of the Government's financial transactions and cash balances. Looking ahead, monetary policy transmission would benefit from developing RMA's liquidity forecasting and management capacity.

This book on the economics of livestock disease insurance is organized into three major parts. Following an introduction (chapters 1-2), part II (chapters 3-8) includes a variety of discussions about what is known about how to build a livestock insurance programme. It begins with a look at the conceptual basis for government involvement in the management of livestock diseases, including prevention, control, regulation and eradication. This discussion is picked up by looking at incentive compatibility and insurability conditions in the private sector, emphasizing how livestock disease management is unique. Compensation is also examined, including what losses should be compensated, choosing a method to value the losses, determining the portion of losses to compensate, and outlining a potential role for insurance. Finally, the complexity of the risks at the farm level is demonstrated using a model that evaluates revenue insurance. Part III (chapters 9-20)

offers a diverse discussion about disease management issues and programmes in Australia, Canada, Europe and the USA. These chapters include more discussion about how to build economically sound insurance programmes, and observations are based on modelling or observing case studies. The book has a subject index.
