 Transport Revolutions: Moving People and Freight without Oil sets out the challenges to our growing dependence on transport fuelled by low-priced oil. These challenges include an early peak in world oil production and profound climate change resulting in part from oil use. It proposes responses to ensure effective, secure movement of people and goods in ways that make the best use of renewable sources of energy while minimizing environmental impacts. Transport Revolutions synthesizes engineering, economics, environment, organization, policy and

technology, and draws extensively on current data to present important conclusions. The authors argue that land transport in the first half of the 21st century will feature at least two revolutions. One will involve the use of electric drives rather than internal combustion engines. Another will involve powering many of these drives directly from the electric grid - as trains and trolley buses are powered today - rather than from on-board fuel. They go on to discuss marine transport, whose future is less clear, and aviation, which could see the most dramatic breaks from current practice. With its expert analysis of the politics and business of transport, Transport Revolutions is essential reading for professionals and students in transport, energy, town planning and public policy.

The term Minimalism has not always been used in a favorable sense, especially in architecture, and even today it may be the cause of some confusion and ambiguity. The problem comes from the word's use in defining a creative current, school or trend when in fact it refers to an aesthetic. At the same time, this aesthetic is not chronologically well defined either and, moreover, interacts with different disciplines. This explains why we find minimalist buildings in periods very far apart from each other and in architects as different as Tadao Ando, Eduardo Souto de Moura, Jacques Herzog & Pierre de Meuron or Luis Barragán, among others. Minimalism DesignSource investigates the minimalism movement, covering the last years of the decade of the 1990s and the first years of the twenty-first century to inquire into the origins of the term minimalism and in how the minimalism phenomenon played out in other fields like art, painting, fashion, and sculpture has affected minimalism in architecture, define the result of the use of pure and simple lines, the reduction of language elements and, as far as architecture is concerned, the investigation of the treatment of space and of building possibilities.

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In Experiments in Ethics, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of

philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

The scientific mission of Home Economics is to make the case for a sustainable, responsible requirement-orientated everyday culture of solidarity of the genders and generations. These innate value concepts for research and teaching serve to define its disciplinary competence and lay the foundation for meaningful inter- and trans-disciplinary research and teaching. The «Personal and Social Systems Theory of Household Activities» is conceived as a self-contained scientific theory and methodology for university home economics research and education. As an applied science of great varieties of practice-oriented professions it offers the essential common foundation.

A little effort goes a long way-that's what Sachiko, Honda-san, and Gunji-sensei learn as they struggle to work together to make life easier for the Special Education children. With the help of gadgets and the support of more people in their environment than meets the eye, Hikaru and Miyu become able to communicate better with the world around them. But when Hikaru's teen idol classmate sends some mothers into a flashbulb frenzy that causes Hikaru to panic, other parents begin to question his presence alongside "normal" students in the classroom. Hikaru's first school trip also ends in disaster, when he gets separated from the group, and Sachiko begins to worry that Hikaru is losing his hard-fought place in society.

This book provides specialists and executives with a clear, yet practical set of recommendations to meet the challenges of digital transformation and ensure long-term success as a leader in a primarily digital business world. The authors describe the fundamental principles of digitization and its economic opportunities and risks, integrating them into a framework of classic and new management methods. The book also explores how increasing digitization - not only of communication, but of complete value chains - has led to a need to establish a digital business leadership. Digitization is changing people and markets: it causes the upheaval of entire industries, creates new digital-centric companies, and forces established companies to cope with the transformation activities associated with these digitization processes. New approaches and methods have to be learned, tried and tested patterns of thinking have to be explored, and last but not least, innovation activities have to be understood as continuous necessities. At the same time, digital business offers considerable opportunities for renewing competitive advantages, improving existing process structures and realigning products, services and business models.
