This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on

mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

This study of Scottish royal government in the twelfth and thirteenth centuries uses untapped legal evidence to set out a new narrative of governmental development. Between 1124 and 1290, the way in which kings of Scots ruled their kingdom transformed. By 1290 accountable officials, a system of royal courts, and complex common law procedures had all been introduced, none of which could have been envisaged in 1124. *Challenges to Authority and the Recognition of Rights* Island Press An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

While challenges to authority are generally perceived as destructive to legal order, this original collection of essays, with Magna Carta at its heart, questions this assumption. In a series of chapters concerned with different forms of challenges to legal authority - over time, geographical place, and subject matters both public and private - this volume demonstrates that

challenges to authority which seek the recognition of rights actually change the existing legal order rather than destroying it. The chapters further explore how the myth of Magna Carta emerged and its role in the pre-modern world; how challenges to authority formed the basis of the recognition of rights in particular areas within England; and how challenges to authority resulted in the recognition of particular rights in the United States, Canada, Australia and Germany. This is a uniquely insightful thematic collection which proposes a new view into the processes of legal change.

Clinicians and patients can no longer wait for answers to fundamental questions regarding how to properly evaluate and treat concussions and traumatic brain injuries. Doctors, those suffering, and their loved ones have questions that need to be answered, including: • When will someone emerge from a coma? • Can the fear of going out in public be overcome? • Will problems pertaining to memory and anger management go away? • Will the individual be able to work again? Dr. Kester J Nedd, a board-certified neurologist, draws on his years of experience treating patients suffering from head injuries to answer these questions and many more. Filled with real stories of patients, this first volume explores how this modern epidemic is often misdiagnosed or left untreated. Unsound definitions, rules of engagement, and limited scientific evidence has caused us to lose generations of people who suffered the fate of this condition. The author shares a new and transformative evaluation method, known as Brain Hierarchical Evaluation and Treatment- the BHET method. The book outlines the hierarchical organization of the brain "from head to tail" and highlights what happens to the brain after an injury and how it responds.

"The objective of this volume is to examine the Cenozoic tectonic and magmatic evolution from the arc to the retroarc of a distinctive end-member of the Andean accretionary orogen between 35°S and 39°S. The evolution of the Andes in this region provides an outstanding case study of an orogen where periods of contraction and extension, crustal shortening and normal faulting, and differences in retroarc volcanism reflect a tectonic regime that alternates in space and time. Structural, magmatic, and

paleogeographic patterns correlate strongly with the dynamics of the subduction zone. The region includes the Neuquen basin which is one of the most prolific of the Central Andes. The tectonic setting is important in understanding hydrocarbon systems of the sub-Andean basin and the potential for ore deposits in the cordillera. The book is fundamental for researchers working on tectonics and magmatism in Andean type systems as well as those involved in exploration."--Publisher's website.

The Shape of the State in Medieval Scotland, 1124-1290 National Academies Press

African legal realities reflect an intertwining of transnational, regional, and local normative frameworks, institutions, and practices that challenge the idea of the sovereign territorial state. This book analyses the novel constellations of governance actors and conditions under which they interact and compete. The work follows a spatial approach as the emphasis on normative spaces opens avenues to better understand power relations, processes of institutionalization, and the production of legitimacy and normativities themselves. Selected case studies from thirteen African countries deliver new empirical data and grounded insights from, and into, particular normative spaces. The individual chapters explore the interrelationships between various normative orders, diverse actors, and their influences. The encounters between different normative understandings and actors open up space and multiple forums for negotiating values. The authors analyse how different doctrines, institutions, and practices are constructed, contested, negotiated, and adapted in translation processes and thereby continuously reshape Africa's multidimensional normative spaces. The volume delivers nuanced views of jurisprudence in Africa and presents an excellent resource for scholars and students of anthropology, legal geography, legal studies, sociology, political sciences, international relations, African studies, and anyone wishing to gain a better understanding of how legal constellations are shaped by unreflected assumptions about the state and the rule of law.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical

foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
