Horticultural Flora of South-eastern Australia: Flowering plants dicotyledons part 2 Timber Press (OR)

Trees and shrubs are a valuable asset to a garden bringing structure, shade, year-round interest and the all-important vertical dimension. But choosing the right ones for small gardens is a fine art, and it's all too easy to end up with heavyweight shrubs overtaking the border, dysfunctional climbers and trees outgrowing their designated spaces. In this practical reference, woody plant expert Diana Miller takes the anguish out of the process by recommending plants and cultivation techniques that excel in small garden spaces. Small gardens require careful planting, and the book starts by considering plants that fulfil a particular design function, such as trees that provide the right levels of shade for an underplanting of choice bulbs, columnar or weeping trees for very restricted spaces, and specimen shrubs that provide an effective foil for herbaceous perennials in a mixed border. At the heart of this book is a comprehensive plant directory that provides detailed descriptions, including full cultivation advice for over 400 top-performing trees and shrubs. Further advice on pruning, information on planting to encourage wildlife and handy lists that allow readers to search by colour, height and other characteristics are invaluable.

Horticulture has remained far behind in understanding of botanical principles. Recent phylogenetic (DNA-based) reorganization of higher plants has revolutionized taxonomic treatments of all biological entities, even when morphology does not completely agree with their organization. This book is an example of applying principals of botanical phylogenetic taxonomy to assemble genera, species, and cultivars of 200 vascular plant families of ferns, gymnosperms, and angiosperms that are cultivated for enhancement of human living space; homes, gardens, and parks. The emphases are on cultivated species but examples of some plants are often shown in the wild and in landscapes. In providing descriptions, it is assumed that students and other interested individuals have no background in general botany (plant characteristics), or nomenclature. Fundamental features of all plant groups discussed are fully illustrated by original watercolor drawings or photographs. Discussion of the families is grounded on recent botanical phylogenetic treatments, which is based on common ancestry (monophyly). Of course, phylogenetic taxonomy is not a new concept, and was originally based on morphological characteristics; it is the DNA-based phylogeny that has revolutionized modern biological classifications. In practical terms, this book represents the horticultural treatment that corresponds to phylogenetic-based botanical taxonomy, to which is added cultigens and cultivated genera and species. Hence, the harmony between horticultural and botanical taxonomy. This book covers phylogenetic-based taxonomy of Ferns, Gymnosperms, and Angiosperms (Monocots). A companion volume covers Angiosperms (Eudicots).

Blooms and Brushstrokes takes you on a unique journey through the history of Australian art, one flower at a time, examining the blooms depicted in still lifes, floral portraits, decorative interiors and botanical illustrations by a long line of Australian artists. Mother-and-daughter team Penelope and Tansy Curtin start this fascinating journey in the late eighteenth century, when the traditions adhering to the Western art canon were transplanted into the newly colonised Australia. They follow it through the rapidly developing artistic styles of the early twentieth century, to the new media of the contemporary period. These works of art also shine a light on the role and importance of plants and flowers in everyday life. They illustrate changing floral fashions, as well as highlighting flowers in their various forms - cut flowers, pot plants and gardens. And along the way you'll encounter many of Australia's most significant artists, including John Glover, Arthur Streeton, Margaret Preston, Grace Cossington Smith, John Brack and Margaret Olley, as well as some of Australia's most beautiful, and sometimes intriguing, native flora, such as the waratah and Sturt's desert pea, not to mention perennial garden favourites like roses, sweet peas and daisies. Spectacular, intimate, engaging and meticulously researched - and full of interesting and quirky facts about the flowers and the artists themselves, Blooms and Brushstrokes is a book for art, flower and history lovers alike.
