The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the

dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

The most current scientific information from the world's leading medical journals. Although there is growing consumer awareness of alternative and complementary medicine, there is a lack of comprehensive information available on herbal products. While pharmacists, physicians and other health care professionals sometimes offer advice, their patients want more information. The *Complete Natural Medicine Guide to the 50 Most Common Medicinal Herbs* is a comprehensive, fully-illustrated reference to the 50 most commonly prescribed herbs. A complete description of each herb is featured along with its other common names, possible adverse effects, therapeutic uses for treating illness and disease as well as potential drug interactions. Some of the herbs included are: Aloe Vera Evening Primrose Goldenseal Scullcap Burdock Tumeric Tea Tree Oil Meadowsweet This guide is written by professional pharmacists, one a naturopathic doctor, using the most current research and clinical testing. The authors' easy-to-understand text, combined with the latest findings and clear directions for safe dosages, makes this practical reference on medicinal herbs a primary resource of data.

Pilots who successfully control their hypertension with medications, diet, and/or exercise can be medically certified to fly an aircraft. At the present time, approximately 8% of active pilots are designated as "hypertensive with medication" by the Federal Aviation Administration (FAA). One of the groups of antihypertensives is the beta-blocker.

Of this group, atenolol, metoprolol, and propranolol are commonly prescribed, and they also have chemical and structural similarities. The FAA's Civil Aerospace Medical Institute (CAMI) toxicologically evaluates postmortem biological samples collected from pilots involved in fatal civil aviation accidents. Over the 10-year period, 1993-2002, CAMI has identified 50 pilot fatalities wherein atenolol was found in 24 pilots, metoprolol in 19 pilots, and propranolol in 7 pilots, which is consistent with the fact that these drugs have been in the lists of the top 200 most-prescribed drugs in the United States. In a few of the 50 pilot fatality cases, initial analysis suggested the presence of atenolol and metoprolol. However, there was no medical history with these cases supporting the use of both of these drugs, and it is also unusual for a patient to be prescribed atenolol together with metoprolol and/or propranolol. Therefore, further examination of the cases, wherein atenolol and metoprolol were apparently present, was undertaken. Atenolol, metoprolol, and/or propranolol, with their possible metabolite(s), were extracted from the selected case specimens, derivatized with pentafluoropropionic anhydride (PFPA), and analyzed by gas chromatography/mass spectrometry (GC/MS). The MS spectra of the PFPA derivatives of these 3 antihypertensives and a metoprolol metabolite are nearly identical. All of the PFPA derivatives had baseline GC separation, with the exception of a metoprolol metabolite product, which co-eluted with atenolol.

On October 25, 1999, the President directed the Secretary of Health and

Human Services to study prescription drug costs and trends for Medicare beneficiaries. He asked that the study investigate: price differences for the most commonly used drugs for people with and without coverage; drug spending by people of various ages, as a percentage of income and of total health spending; and trends in drug expenditures by people of different ages, as a percentage of income and of total health spending. This report is the Department's response to that request. It represents the work of individuals and agencies throughout the Department, including the Agency for Healthcare Research and Quality (AHRQ), the Food and Drug Administration (FDA), the Health Care Financing Administration (HCFA), and the Office of the Assistant Secretary for Planning and Evaluation (ASPE).

A NEW YORK TIMES BESTSELLER New York Times 100 Notable Books of 2019 New York Public Library Best Books of 2019 Kirkus Reviews Best Health and Science Books of 2019 Science Friday Best Books of 2019 New postscript by the author From an award-winning journalist, an explosive narrative investigation of the generic drug boom that reveals fraud and life-threatening dangers on a global scale—The Jungle for pharmaceuticals Many have hailed the widespread use of generic drugs as one of the most important public-health developments of the twenty-first century. Today, almost 90 percent of our pharmaceutical market is comprised of generics, the majority of which are manufactured overseas. We have been reassured by our doctors, our pharmacists and our regulators that generic drugs are identical to their brand-name counterparts, just less expensive. But is this really true? Katherine Eban's *Bottle of Lies* exposes the deceit behind generic-drug manufacturing—and the attendant risks for global health. Drawing on exclusive accounts from whistleblowers and

regulators, as well as thousands of pages of confidential FDA documents, Eban reveals an industry where fraud is rampant, companies routinely falsify data, and executives circumvent almost every principle of safe manufacturing to minimize cost and maximize profit, confident in their ability to fool inspectors. Meanwhile, patients unwittingly consume medicine with unpredictable and dangerous effects. The story of generic drugs is truly global. It connects middle America to China, India, sub-Saharan Africa and Brazil, and represents the ultimate litmus test of globalization: what are the risks of moving drug manufacturing offshore, and are they worth the savings? A decade-long investigation with international sweep, high-stakes brinkmanship and big money at its core, *Bottle of Lies* reveals how the world's greatest public-health innovation has become one of its most astonishing swindles.

Making Medicines Affordable ASHP

Thanks to remarkable advances in modern health care attributable to science, engineering, and medicine, it is now possible to cure or manage illnesses that were long deemed untreatable. At the same time, however, the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care. Total medical expenditures are rapidly approaching 20 percent of

the gross domestic product and are crowding out other priorities of national importance. The use of increasingly expensive prescription drugs is a significant part of this problem, making the cost of biopharmaceuticals a serious national concern with broad political implications. Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years, finding a way to make prescription medicines—and health care at large—more affordable for everyone has become a socioeconomic imperative. Affordability is a complex function of factors, including not just the prices of the drugs themselves, but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts. Therefore, any solution to the affordability issue will require considering all of these factors together. The current high and increasing costs of prescription drugs—coupled with the broader trends in overall health care costs—is unsustainable to society as a whole. *Making Medicines Affordable* examines patient access to affordable and effective therapies, with emphasis on drug pricing, inflation in the cost of drugs, and insurance design. This report explores structural and policy factors influencing drug pricing, drug access programs, the emerging role of comparative effectiveness assessments in payment policies, changing finances of medical practice with regard to drug costs and reimbursement, and measures to prevent drug shortages and foster continued innovation in drug development. It makes recommendations for policy actions that could address drug price trends, improve patient access to affordable and effective treatments, and encourage

innovations that address significant needs in health care.

Turn to this new third edition for consistent outcomes on even your most complex implant cases! World-renowned dental implantologist Carl E. Misch gives you expert advice and guidance on the various surgical approaches to placing implants in the revision of his best-selling classic. Over 1,000 full-color illustrations depict details of implants, related materials, and surgical procedures, while well-known contributors (Mohamed Sharawy, Martha Warren Bidez, Adriano Piatelli, and others) share a wealth of knowledge in their respective fields. This third edition provides an excellent opportunity for you to develop and refine your skills and experience more consistent, predictable clinical outcomes. Thorough explanations of the rationale for implants and their specific characteristics discuss why different options work better for different patients; the rationale behind implant materials and sizes; and the overall science of osteointegrated implants - providing a full understanding of how implants behave under certain circumstances and how to make the best choices for implant patients. Chapter on Diagnostic Imaging and Techniques focuses on the latest technology available to determine patient conditions, familiarizing you with recent advances and how they apply to treatment planning principles. Section on Treatment Planning discusses the rationales for implant placement, variables in implants and patient conditions, and the four degrees of jaw

bone density, Dr. Misch's best-known criterion for successful implant placement. Prepares you for actual treatment by reviewing scientific fundamentals such as applied anatomy, biomechanical principles, current biomaterials, prevention and management of dental infections, and pharmacologic considerations. Surgical procedure chapters are of benefit to the implant surgeon and are critical to the restoring dentist who wants to better understand and appreciate surgical concepts. Over 1,000 full-color illustrations depict details of implants, related materials, and surgical procedures. Brand-new coverage includes: Key Implant Positions and Number, Ideal Implant Surgery, Extraction Socket and Barrie Membrane

Bone Grafts, Sinus Pathology and Complications of Sinus Grafts, Immediate Loading for a Single Tooth, Partially Edentulous and Completely Edentulous Patient. Important updates include indications and contraindications for rationale of biomechanical treatment plans, layered approach to bone grafting, autograft block bone grafting, soft tissue surgery, and implant esthetics and maintenance. A new chapter on Tissue Engineering uses current information on platelet-rich plasma membranes and other elements of tissue engineering so you can take advantage of appropriate materials. Emphasis on evidence-based implant outcomes provides valuable information on which procedures have the greatest likelihood of success and lowest risk of complications.
