Acute & Chronic Wounds John Wiley & Sons

This book describes how chronic wounds follow a completely different healing trajectory to acute wounds and discusses the factors associated with these poor healing trajectories. These factors include age, chronic inflammation, phenotypic changes in such cells as macrophages, fibroblasts, and keratinocytes, colder, alkaline wound milieu, wound related hypoxemia, and diabetes. Other factors implicated include reperfusion injury, poor patient compliance, presence of undiagnosed and therefore unmanaged biofilms and wound pain. The past decades have yielded reliable evidence-based guidelines and standardized care, but the healing of diabetic foot wounds continues to be unpredictable notwithstanding these advances, while the recurrence rates are also high. The benefits of technology in wound diagnosis are evidence-based and the use of this technology also features in guidelines. However, the same argument cannot be extended to adjunct devices to facilitate wound closure even though many devices potentially benefit wound healing. Chronic Wound Management describes how innovation is based on technology that itself informs evidence, the gap between the evidence available, the performance of technology and how do we bridge this gap. It reviews the lessons learnt from the COVID-19 pandemic and whether traditional medicine systems offer us real or imaginary benefits. Consequently, this book is an important addition to the literature in the area and an essential read for all healthcare professionals working with these patients.

Clinical Guide to Skin and Wound Care Elsevier Health Sciences

Chronic wounds are a major cause of patient suffering and a financial burden to society. The focus of this book is assessment and management of chronic wounds in a Wound Care Practice. The reader can examine the principles of managing the wound and treating the underlying cause of pressure sores, vascular insufficiency ulcers, chronic venous insufficiency ulcers, diabetic/neurotrophic foot ulcers, and other chronic wounds. This book represents the combined efforts of 60 authors selected from the basic sciences, clinical sciences, and clinical practice. Section I defines the Problem Wound, Section II describes the Principles of Wound Assessment, Section III discusses the Principles of Wound Management, Section IV deals with Pain, Infection and Adjunctive Therapies, and Section V pertains to Healthcare Delivery. We have gathered together a rationale, a fairly tight knit concept of how healing works, to promise a better day someday in the not-too-distant future. This book is different from many others in the sense that it emphasizes assessment or, if you wish, wound diagnostics. T.K. Hunt, MD, Department of Surgery, UCSF
