I've Got My Period. So What? Penguin
This book presents the hotly debated question of whether quantum mechanics plays a non-trivial role in biology. In a timely way, it sets out a distinct quantum biology agenda. The burgeoning fields of nanotechnology, biotechnology, quantum technology, and quantum information

processing are now strongly converging. The acronym BINS, for Bio-Info-Nano-Systems, has been coined to describe the synergetic interface of these several disciplines. The living cell is an information replicating and processing system that is replete with naturally-evolved nanomachines, which at some level require a quantum mechanical description. As quantum engineering and nanotechnology meet, increasing use will be made of biological structures, or hybrids of biological and fabricated systems, for producing novel devices for information storage and processing and other tasks. An understanding of these systems at a quantum mechanical level will be indispensable. Contents:Foreword

highly anticipated new book with bestselling author David Levithan! Theodore Finch is fascinated by death. Every day he thinks of ways he might kill himself, but every day he also searches for—and manages to find—something to keep him here, and alive, and awake. Violet Markey lives for the future, counting the days until graduation, when she can escape her small Indiana town and her aching grief in the wake of her sister's recent death. When Finch and Violet meet on the ledge of the bell tower at school—six stories above the ground—it's unclear who saves whom. Soon it's only with Violet that Finch can be himself. And it's only with Finch that Violet can forget to count away the days and start living them. But as Violet's world grows, Finch's begins to shrink. . . .  Your period. What is it, really? And why is it so embarrassing to walk to the bathroom hiding a tampon in your sleeve? Comedian and Scandinavian YouTube sensation Clara Henry has the answers to all your burning questions about bleeding. Have you always wondered what menstruation is, why it causes terrible cramps, or why it makes you want to do nothing but eat chocolate and watch cute cat videos? Have you been shocked that it's taboo to talk about something that half the world's population goes through every month? And above all, have you been looking for the best snarky response to the question “Are you on your period, or what?” Whether you're expecting your first period, have already gotten it, or know someone close to you who's just begun the torment, this funny and informative book will tell you everything you need to know. In a funny, powerful, and entertaining voice, this book covers important terms, types of sanitary protection, and the history of menstruation

and women's fight for equal access to reproductive healthcare. And if you suddenly find yourself hankering for chocolate or cute animals? Well. Welcome to the period club.

Virgil Wander Chicken House
 Now a major motion picture starring Cole Sprouse and Haley Lu Richardson!
 Goodreads Choice Winner, Best Young Adult Fiction of 2019 In this #1 New York Times bestselling novel that's perfect for fans of John Green's *The Fault in Our Stars*, two teens fall in love with just one minor complication—they can't get within a few feet of each other without risking their lives. Can you love someone you can never touch? Stella Grant likes to be in control—even though her totally out of control lungs have sent her in and out of the hospital most of her life. At this point, what Stella needs to control most is keeping herself away from anyone or anything that might pass along an infection and jeopardize the possibility of a lung transplant. Six feet apart. No exceptions. The only thing Will Newman wants to be in control of is getting out of this hospital. He couldn't care less about his treatments, or a fancy new clinical

drug trial. Soon, he'll turn eighteen and then he'll be able to unplug all these machines and actually go see the world, not just its hospitals. Will's exactly what Stella needs to stay away from. If he so much as breathes on Stella she could lose her spot on the transplant list. Either one of them could die. The only way to stay alive is to stay apart. But suddenly six feet doesn't feel like safety. It feels like punishment. What if they could steal back just a little bit of the space their broken lungs have stolen from them? Would five feet apart really be so dangerous if it stops their hearts from breaking too?

If I Stay Penguin

From journalist and author Sue Halpern comes a wry, observant look at contemporary life and its refugees. Halpern's novel is an unforgettable tale of family...the kind you come from and the kind you create. People are drawn to libraries for all kinds of reasons. Most come for the books themselves, of course; some come to borrow companionship. For head librarian Kit, the public library in Riverton, New Hampshire, offers what she craves most: peace. Here, no one expects Kit to talk about the calamitous events

that catapulted her out of what she thought was a settled, suburban life. She can simply submerge herself in her beloved books and try to forget her problems. But that changes when fifteen-year-old, home-schooled Sunny gets arrested for shoplifting a dictionary. The judge throws the book at Sunny—literally—assigning her to do community service at the library for the summer. Bright, curious, and eager to connect with someone other than her off-the-grid hippie parents, Sunny coaxes Kit out of her self-imposed isolation. They're joined by Rusty, a Wall Street high-flyer suddenly crashed to earth. In this little library that has become the heart of this small town, Kit, Sunny, and Rusty are drawn to each other, and to a cast of other offbeat regulars. As they come to terms with how their lives have unraveled, they also discover how they might knit them together again and finally reclaim their stories.

The contributions in this volume map out how technologies are used and designed to plan, maintain, govern, demolish, and destroy the city. The chapters

demonstrate how urban technologies shape, and are shaped, by fundamental concepts and principles such as citizenship, publicness, democracy, and nature. The many authors herein explore how to think of technologically mediated urban space as part of the human condition. The volume will thus contribute to the much-needed discussion on technology-enabled urban futures from the perspective of the philosophy of technology. This perspective also contributes to the discussion and process of making cities 'smart' and just. This collection appeals to students, researchers, and professionals within the fields of philosophy of technology, urban planning, and engineering.

Perfect Chemistry Penguin

WINNER OF THE SAMUEL ELIOT MORISON AWARD FOR NAVAL LITERATURE • "A meticulous, adrenaline-filled account of the earliest days of the Continental Navy."—New York Times bestselling author Laurence Bergreen *America in 1775* was on the verge of revolution—or, more likely, disastrous defeat. After the bloodshed at Lexington and Concord, England's King George sent hundreds of

ships westward to bottle up American harbors and prey on American shipping. Colonists had no force to defend their coastline and waterways until John Adams of Massachusetts proposed a bold solution: The Continental Congress should raise a navy. The idea was mad. The Royal Navy was the mightiest floating arsenal in history, with a seemingly endless supply of vessels. More than a hundred of these were massive "ships of the line," bristling with up to a hundred high-powered cannon that could level a city. The British were confident that His Majesty's warships would quickly bring the rebellious colonials to their knees. They were wrong. Beginning with five converted merchantmen, America's sailors became formidable warriors, matching their wits, skills, and courage against the best of the British fleet. Victories off American shores gave the patriots hope—victories led by captains such as John Barry, the fiery Irish-born giant; fearless Nicholas Biddle, who stared down an armed mutineer; and James Nicholson, the underachiever who finally redeemed himself with an inspiring display of coolness and bravery. Meanwhile, along the British coastline,

daring raids by handsome, cocksure John Paul Jones and the “Dunkirk Pirate,” Gustavus Conyngham—who was captured and sentenced to hang but tunneled under his cell and escaped to fight again—sent fear throughout England. The adventures of these men and others on both sides of the struggle rival anything from Horatio Hornblower or Lucky Jack Aubrey. In the end, these rebel sailors, from the quarterdeck to the forecastle, contributed greatly to American independence.

Meticulously researched and masterfully told, *Give Me a Fast Ship* is a rousing, epic tale of war on the high seas—and the definitive history of the American Navy during the Revolutionary War.

Quantum Aspects of Life Johns Hopkins University Press

A Sunday Times bestseller and Richard and Judy Bookclub pick, *The Confession* is an absorbing tale of secrets and self-discovery from Jessie Burton, the million-copy bestselling author of *The Miniaturist* and *The Muse*. When Elise Morceau meets the writer Constance Holden, she quickly falls under her spell. Connie is sophisticated, bold and alluring – everything Elise feels she is not. She

follows Connie to LA, but in this city of strange dreams and razzle-dazzle, Elise feels even more out of her depth and makes an impulsive decision that will change her life forever. Three decades later, Rose Simmons is trying to uncover the story of her mother, who disappeared when she was a baby. Having learned that the last person to see her was a now reclusive novelist, Rose finds herself at the door of Constance Holden’s house in search of a confession . . . 'Without doubt one of the best novels of recent years' - Elizabeth Day, author of *How to Fail*.

Enrico Fermi is unquestionably among the greats of the world's physicists, the most

famous Italian scientist since Galileo. Called the Pope by his peers, he was regarded as infallible in his instincts and research. His discoveries changed our world; they led to weapons of mass destruction and conversely to life-saving medical interventions. This unassuming man struggled with issues relevant today, such as the threat of nuclear annihilation and the relationship of science to politics. Fleeing Fascism and anti-Semitism, Fermi became a leading figure in America's most secret project: building the atomic bomb. The last physicist who mastered all branches of the discipline, Fermi was a rare mixture of theorist and experimentalist. His rich legacy encompasses key advances in fields as diverse as comic rays, nuclear technology, and early computers. In their revealing book, *The Pope of Physics*, Gino Segré and Bettina Hoerlin bring this scientific visionary to life. An examination of the human dramas that touched Fermi's life as well as a thrilling history of scientific innovation in the twentieth century, this is the comprehensive biography that Fermi deserves.

From the New York Times bestselling author Simone Elkeles comes an epic love story like no other . . . First in the gripping PERFECT CHEMISTRY series, this is the next addictive read for fans of Anna Todd's

AFTER series, and Caroline Kepnes's YOU. When Brittany Ellis walks into chemistry class on the first day of senior year, she has no clue that her carefully created 'perfect' life is about to unravel before her eyes. Forced to be lab partners with Alex Fuentes, a gang member from the other side of town, Brittany finds herself having to protect everything she's worked so hard for - her flawless reputation, her relationship with her boyfriend and, most importantly, the secret that her home life is anything but perfect. Alex is a bad boy and he knows it. So when he makes a bet with his friends to lure Brittany into his life, he thinks nothing of it. But the closer Alex and Brittany get to each other the more they realise that sometimes appearances can be deceptive and that you have to look beneath the surface to discover the truth.
