An introduction to the engineering principles of embedded systems, with a focus on modeling, design, and analysis of cyber-physical systems. The most visible use of computers and software is processing information for human consumption. The vast majority of computers in use, however, are much less visible. They run the engine, brakes, seatbelts, airbag, and audio system in your car. They digitally encode your voice and construct a radio signal to send it from your cell phone to a base station. They command robots on a factory floor, power generation in a power plant, processes in a chemical plant, and traffic lights in a city. These less visible computers are called embedded systems, and the software they run is called embedded software. The principal challenges in designing and analyzing embedded systems stem from their interaction with physical processes. This book takes a cyber-physical approach to embedded systems, introducing the engineering concepts underlying embedded systems as a technology and as a subject of study. The focus is on modeling, design, and analysis of cyber-physical systems, which integrate computation, networking, and physical processes. The second edition offers two new chapters, several new exercises, and other improvements. The book can be used as a textbook at the advanced undergraduate or introductory graduate level and as a professional reference for practicing engineers and computer scientists. Readers should have some familiarity with machine structures, computer programming, basic discrete mathematics and algorithms, and signals and systems.

Explore queer themes in films from Hong Kong gangster flicks to Bollywood melodramas! Although Asian films have reached a new height in popularity worldwide, Queer Asian Cinema: Shadows in the Shade is the first full-length book in English solely devoted to examining the aesthetics and politics of homosexuality in Asian films. This unique book presents multiple points of view on the portrayal of gay, lesbian, and transgendered people in film throughout Asia. In addition to studies of the representation of identified gay men, lesbians, and transgendered individuals, it reveals the hidden homoerotic subtext of otherwise conventional films. Queer Asian Cinema: Shadows in the Shade examines diverse aspects of Asian films, including: the political and psychological links between feudal and sadomasochist hierarchies the inevitable punishment of homoerotic bonds in gangster films the integration of the homosexual couple into the Confucian family structure in Korean films the complexities of cross-gender casting the differences between transvestism and cross-dressing the definition of male genitalia as obscene Queer Asian Cinema: Shadows in the Shade brings together experts in both film-making and movie criticism, providing a balanced viewpoint to unite the worlds of academic and popular perceptions on this subject. It opens an exciting discussion of this important and largely neglected area of cinematic discourse.
