FORD EVIE

The United States and Germany in the Era of the Cold War, 1945-1990 Vintage

This open access book presents and discusses current issues and innovative solution approaches for land management in a European context. Manifold sustainability issues are closely interconnected with land use practices. Throughout the world, we face increasing conflict over the use of land as well as competition for land. Drawing on experience in sustainable land management gained from seven years of the FONA programme (Research for Sustainable Development, conducted under the auspices of the German Federal Ministry of Education and Research), the book stresses and highlights co-design processes within the "co-creation of knowledge", involving collaboration in transdisciplinary research processes between academia and other stakeholders. The book begins with an overview of the current state of land use practices and the subsequent need to manage land resources more sustainably. New system solutions and governance approaches in sustainable land management are presented from a European perspective on land use. The volume also addresses how to use new modes of knowledge transfer between science and practice. New perspectives in sustainable land management and methods of combining knowledge and action are presented to a broad readership in land system sciences and environmental sciences, social sciences and geosciences. This book received the Gerd Albers Award. The prize is awarded by the International Society of City and Regional Planners (ISOCARP).

The mighty and majestic European bison is the relictual embodiment of the wildness of prehistoric Europe. Tragically, the millennia since that time have seen so many species driven to extinction by human impacts, and the European bison has only narrowly avoided the same fate. Today, the species represents the symbolic sentinel of successful conservation actions in a world in which such achievements remain few and far between. From an early stage in the restitution of the European bison, husband-and-wife team Małgorzata Krasińska and Zbigniew A. Krasiński have been participating in relevant management initiatives and researching all facets of the bison, from its morphology and diet, to its movements, social life and reproduction, and the conservation management actions that have been taken to save it. Now they have summarised this wealth of knowledge on the species, giving rise to a publication ideal for students, professional biologists and conservationists, but also for all nature enthusiasts. This new edition of the monograph offers extensively updated content taking into account research carried out on the European bison in the last few years. Also featured, a new chapter devoted to knowledge of the genetics of the species drawn up by Małgorzata Tokarska of the Białowieża-based Mammal Research Institute PAS.

An Empire Wilderness Springer Science & Business Media

Drylands cover 41 percent of the earth's terrestrial surface. The urgency of and international response to climate change have given a new place to drylands in terms both of their vulnerability to predicted climate change impacts and their potential contribution to climate change mitigation. This book aims to apply the new scientific insights on complex dryland systems to practical options for development. A new dryland paradigm is built on the resources and capacities of dryland peoples, on new and emergent economic opportunities, on inward investment, and on the best support that dryland science can offer.

Reinhold Wagnleitner argues that cultural propaganda played an enormous part in integrating Austrians and other Europeans into the American sphere during the Cold War. In *Coca-Colonization and the Cold War*, he shows that 'Americanization' was the result not only of market forces and consumerism but also of systematic planning on the part of the United States. Wagnleitner traces the intimate relationship between the political and economic reconstruction of a democratic Austria and the parallel process of cultural assimilation. Initially, U.S. cultural programs had been developed to impress Europeans with the achievements of American high culture. However, popular culture was more readily accepted, at least among the young, who were the primary target group of the propaganda campaign. The prevalence of Coca-Cola and rock 'n' roll are just two examples addressed by Wagnleitner. Soon, the cultural hegemony of the United States became visible in nearly all quarters of Austrian life: the press, advertising, comics, literature, education, radio, music, theater, and fashion. Hollywood proved particularly effective in spreading American cultural ideals. For Europeans, says Wagnleitner, the result was a second discovery of America. This book is a translation of the Austrian edition, published in 1991, which won the Ludwig Jedlicka Memorial Prize.

THE HASHISH EATER (1920), an extraordinary prose-poem of malignant cosmic decadence and psychedelic evil, remains the signature work of its creator, the prolific fantasy author Clark Ashton Smith. Figuring prominently in the ranks of classic drug literature, THE HASHISH EATER clearly shows the influence on Smith of nineteenth century symbolists and visionary decadents such as Huysmans, Baudelaire, and William Beckford, allied to an avant-garde evocation of galactic horror. This special ebook edition of THE HASHISH EATER also includes the author's own summary of the work, plus a rare bonus chapter, Smith's hallucinatory fragment IN A HASHISH DREAM.

This book is a volume in the Penn Press Anniversary Collection. To mark its 125th anniversary in 2015, the University of Pennsylvania Press rereleased more than 1,100 titles from Penn Press's distinguished backlist from 1899-1999 that had fallen out of print. Spanning an entire century, the Anniversary Collection offers peer-reviewed scholarship in a wide range of subject areas.

The Future of the Metropolis Universitätsverlag Winter

Nitrogen Assessment: Pakistan as a Case-Study provides a detailed overview of issues and

challenges related to nitrogen use and overuse, thus serving as a reference for researchers in Pakistan and providing important insights for other geographic regions. Excess and inefficient nitrogen use in crops and livestock sectors is polluting our rivers, seas, atmosphere, and ecosystems, contributing to climate change, hampering biodiversity, and contributing to stratospheric ozone depletion. This book covers the importance of nitrogen in relation to food security, human health, and economic stability in South Asia. It also discusses nitrogen status, sources, sinks, and drivers of nitrogen use in Pakistan, focusing on current nitrogen measures and policies. Nitrogen pollution is one of the biggest challenges of 21st Century, and the international scientific community is beginning to recognize the significance of nitrogen pollution and to explore how to combat it. The editors' institution, University of Agriculture, Faisalabad, partners with South Asia Nitrogen Hub, which includes about 30 organizations from South Asia and UK working on nitrogen assessment, budgeting, awareness, and policy guidance, as well as possible measures to reduce nitrogen pollution. Nitrogen Assessment: Pakistan as a Case-Study provides an important guide to this work and is written in a way that is accessible to an audience with a wide range of experience from advanced students to seasoned researchers. Presents an excellent compilation of research-based findings in the first comprehensive assessment of nitrogen use in Pakistan Offers a detailed and comprehensive compilation of data and content from a variety of sources Analyzes important translational insights for other geographic regions seeking to maximize nutrient use efficiency

The Dutch scholar Rob Kroes argues that American culture is "modular," continually fragmenting, disassembling, and reassembling itself--and in the process creating something new. In a series of topical essays that show why he is one of Europe's leading authorities on American culture, Kroes probes trends in American advertising, the image of the Vietnam war in American films, the implications of American vernacular culture as represented in rap music, and other topics.

The eleventh-century monk Ekkehard IV's *Fortune and Misfortune at Saint Gall* chronicles the 880s to 972, near the end of the famous Swiss monastery's two-century-long golden age, bearing witness to the struggles of the tenth-century church reform movement. This volume publishes the Latin text alongside its first complete English translation.

He's the man everyone's talking about. He's taken on gun freaks, stupid white men and corporate crooks. Now Michael Moore is on a new mission: to get us of our behinds and kicking out the corrupt political elites who rule our lives.

USA Univ of North Carolina Press

Having reported on some of the world's most violent, least understood regions in his bestsellers *Balkan Ghosts* and *The Ends of the Earth*, Robert Kaplan now returns to his native land, the United States of America. Traveling, like Tocqueville and John Gunther before him, through a political and cultural landscape in transition, Kaplan reveals a nation shedding a familiar identity as it assumes a radically new one. *An Empire Wilderness* opens in Fort Leavenworth, Kansas, where the first white settlers moved into Indian country and where Manifest Destiny was born. In a world whose future conflicts can barely be imagined, it is also the place where the army trains its men to fight the next war. "A nostalgic view of the United States is deliberately cultivated here," Kaplan writes, "as if to bind the uncertain future to a reliable past." From Fort Leavenworth, Kaplan travels west to the great cities of the heartland--to St. Louis, once a glorious shipping center expected to outshine imperial Rome and now touted, with its desolate inner city and miles of suburban gated communities, as "the most average American city." Kaplan continues west to Omaha; down through California; north from Mexico, across Arizona, New Mexico, and Texas; up to Montana and Canada, and back through Oregon. He visits Mexican border settlements and dust-blown county sheriffs' offices, Indian reservations and nuclear bomb plants, cattle ranches in the Oklahoma Panhandle, glacier-mantled forests in the Pacific Northwest, swanky postsuburban sprawls and grim bus terminals, and comes, at last, to the great battlefield at Vicksburg, Mississippi, where an earlier generation of Americans gave their lives for their vision of an American future. But what, if anything, he asks, will today's Americans fight and die for? At Vicksburg Kaplan contemplates the new America through which he has just traveled--an America of sharply polarized communities that draws its population from pools of talent far beyond its borders; an America where the distance between winners and losers grows exponentially as corporations assume government functions and the wealthy find themselves more closely linked to their business associates in India and China than to their poorer neighbors a few miles away; an America where old loyalties and allegiances are vanishing and new ones are only beginning to emerge. The new America he found is in the pages of this book. Kaplan gives a precise and chilling vision of how the most successful nation the world has ever known is entering the final, and highly uncertain, phase of its history.

Abiturwissen Landeskunde Great Britain, United States of America

One of the main problems and aims of nature conservation in Europe is to protect semi-open landscapes. The development during the past decades is characterized by an ongoing intensification of land use on the one hand, and an increasing number of former meadows and pastures lying fallow caused by changing economic conditions on the other hand. In several countries the establishment of larger "pasture landscapes" with a mixed character of open grassland combined with shrubs and forests has been recognized as one solution to this problem. The book gives an overview of the European projects concerning to this topic - nature conservation policy and strategies, scientific results and practical experiences creating large scale grazing systems.
