The Path to Universal Health Coverage in Bangladesh Routledge  
Hutchison's Clinical Methods, first published more than a century ago, is the classic textbook on clinical skills. It provides an outstanding source of learning and reference for undergraduate medical students and postgraduate doctors. It seeks to teach an integrated approach to clinical practice, so that new methods and investigations are grafted onto established patterns of clinical practice, rather than added on as something extra. The text is organised so that both system-related and problem-oriented chapters are included. Particular emphasis is placed on the importance of the doctor-patient relationship, the essential skills needed for clinical examination, and for planning the appropriate choice of investigations in diagnosis and management. Hutchison's Clinical Methods is an invaluable resource for all those learning and training in medicine and is an essential adjunct to a standard textbook of medicine, surgery or other specialty. The book provides a comprehensive account of the traditional methods of patient history-taking and examination but is updated with a full account of the role of modern investigative techniques. This is a book for students of all ages and all degrees of experience. This established textbook of clinical methods has been thoroughly reviewed by an international group of students and trainee doctors to ensure the text concentrates on the basic principles of history and examination in all the various clinical settings which medical students need to master. The global perspective of the book has been enhanced with a new International Advisory Board recruited from South Asia and the

Middle East.

Bangladesh is committed to achieving universal health coverage (UHC) by 2032; to this end, the government of Bangladesh is exploring policy options to increase fiscal space for health and expand coverage while improving service quality and availability. Despite Bangladesh's impressive strides in improving its economic and social development outcomes, the government still confronts health financing and service delivery challenges. In its review of the health system, this study highlights the limited fiscal space for implementing UHC in Bangladesh, particularly given low public spending for health and high out-of-pocket expenditure. The crisis in the country's human resources for health (HRH) compounds public health service delivery inefficiencies. As the government explores options to finance its UHC plan, it must recognize that reform of its service delivery system with particular focus on HRH has to be the centerpiece of any policy initiative.

Public health emergencies continually reinforce the need for an integrated approach to health systems strengthening, underpinned by a public health approach, helping to build health systems resilience. As part of a collaboration between the USAID Office of the Health Systems and the WHO Integrated Health Services Department, a strategic meeting was convened on 14 April 2021. This had wide-ranging representation which included WHO Deputy Director-General, Executive leadership from USAID, IANPHI and WFPHA. The overarching aim was to examine this topic together and identify actionable steps to build an integrated approach to health system strengthening that brings together health security, humanitarian, disease-specific and life-course-specific programmes. The specific objectives of the meeting were to: facilitate strategic discussions on prevailing practices in health systems resilience for health protection and high-quality health services, to determine actionable next steps for global guidance; inform policy options for WHO, USAID and partners to maximize joint country support for health systems resilience; and identify immediate priorities for next steps following the meeting. To inform and support the proceedings of this meeting, complementary desk reviews were conducted to synthesise evidence, and inform the discussions and way forward. Together, this package consists of (i) a technical meeting report and (ii) two complementary desk reviews. The package was co-developed

with and has received concurrence from the USAID Office of the Health Systems.

This book provides doctors with insights into psychological and relational dynamics to better understand themselves and their patients, deepen their understanding of somatic and psychic dimensions of illness, and give them diagnostic and therapeutic tools to design better treatment procedures for patients. In the first part of the book, the authors explore cognitive, emotional, and somatic strategies that are supportive of doctors' well-being. In the second part, they introduce theoretical knowledge and applicable skills from psychotherapy that can illuminate the complexity of the doctor-patient relationship, broaden doctors' approaches, and upgrade their communicative skills. The third part introduces some of the basic tenets of somatic psychotherapy that can deepen doctors' understanding of symptoms and illness, providing them with richer therapeutic tools and a deeper knowledge of bodily and psychological aspects, interweaving in a variety of medical conditions. This text not only provides a helping hand to both doctors and psychotherapists in designing an amalgamated approach to clinical treatment but also provides doctors with better tools for understanding and managing the intricacies of the doctor-patient relationship.

At a time when political mobilisation is a symptom of social dissatisfaction, young people's participation in political decision-making, practice and ideological change, make foregrounding and investigating their political practices a necessity. The title of this book, *Young People Shaping Democratic Politics: Interrogating Inclusion, Mobilising Education* clearly announces its intention, subject, and mission. This collection has been inspired by topical youth mobilisations that aim to address injustices and inequalities which are rooted in poverty, austerity, violence, increased surveillance, climate change, dislocation, xenophobia, the rise of authoritarian regimes, and a global turn to the political right. Whereas young people are politicised in moments of conflict and become symbolic conduits for the future of their nation, they represent a category most often relegated to the apolitical sphere before and after such moments of crisis. This edited collection seeks to expand our engagement with inclusion beyond educational institutions by situating young people at the centre of our inquiry, as agents of political processes that promote, problematise and re-imagine inclusive societies. The chapters engage in contemporary case-studies, which are mapped across a wide range of countries from Europe (Serbia, Spain and United Kingdom), North Africa (Egypt), South Africa, North America (United States), South-Asia (Bangladesh), and West Asia (Lebanon).

Geographically and demographically Asia is a huge region with a large number of societies and cultures, each affected by their own unique problems including over-population, major natural disasters, poverty and changing social and economic factors. Inevitably this means that different mental health needs have developed across the region. Colonialism, globalization, industrialization and urbanization have brought major

demographic and cultural shifts in the region but clinical mental health practices and services and societal attitudes to mental health issues vary enormously. This handbook surveys the state of the current psychiatric care field across the whole Asia-Pacific region. Focusing on individual countries, each chapter will include: A summary of factors affecting the practice and provision of psychiatric care, including cultural attitudes to mental health issues Coverage of the conceptualisation, causation and prevalence of mental health issues in society An overview of mental health care services and systems available and workforce training Coverage of country specific innovative practices and folk therapies As the first major reference work on psychiatric care in Asia this book is an essential resource for scholars and students researching mental health in Asia as well as psychiatrists and other mental health professionals working in the region.
