Wild animals form an integral component of the human leisure experience. They are a significant part of the leisure industry and are economically valuable entities. However, as sentient beings, animals also have rights and welfare needs, and, like humans, may also have their own leisure desires and requirements. This collection provides an in-depth analysis of the rights and welfare of humans and wild animals as the two relate to one another within the sphere of leisure studies. It examines a wide array of animals, such as wolves, elephants, dolphins and apes, in a diverse range of leisure settings in international locations, from captive wild animals in zoos, hunting, swimming with dolphins and animals used as educators and for tourist entertainment. This book provides a forum for future considerations of wild animals and leisure and a voice for animal welfarist agendas that seek to improve the conditions under which wild animals interact with and are engaged with by humans.

The American South is famous for its astonishingly rich biodiversity. In this book, Georgann Eubanks takes a wondrous trek from Alabama to North Carolina to search out native plants that are endangered and wavering on the edge of erasure. Even as she reveals the intricate beauty and biology of the South’s plant life, she also shows how local development and global climate change are threatening many species, some of which have been graduated to the federal list of endangered species. Why should we care, Eubanks asks, about North Carolina’s Yadkin River goldenrod, found only in one place on earth? Or the Alabama canebrake pitcher plant, a carnivorous marvel being decimated by criminal poaching and a booming black market? These plants, she argues, are important not only to the natural environment but also to southern identity, and she finds her inspiration in talking with the heroes—the botanists, advocates, and conservationists young and old—on a quest to save these green gifts of the South for future generations. These passionate plant lovers caution all of us not to take for granted the sensitive ecosystems that contribute to the region’s long-standing appeal, beauty, and character.

From an acclaimed environmental writer, a groundbreaking and provocative new vision for our relationships with—and responsibilities toward—the planet’s wild animals. Protecting wild animals and preserving the environment are two ideals so seemingly compatible as to be almost inseparable. But in fact, between animal welfare and conservation science there exists a space of underexamined and unresolved tension: wildness itself. When is it right to capture or feed wild animals for the good of their species? How do we balance the rights of introduced species with those already

established within an ecosystem? Can hunting be ecological? Are any animals truly wild on a planet that humans have so thoroughly changed? No clear guidelines yet exist to help us resolve such questions. Transporting readers into the field with scientists tackling these profound challenges, Emma Marris tells the affecting and inspiring stories of animals around the globe—from Peruvian monkeys to Australian bilbies, rare Hawai’ian birds to majestic Oregon wolves. And she offers a companionable tour of the philosophical ideas that may steer our search for sustainability and justice in the non-human world. Revealing just how intertwined animal life and human life really are, Wild Souls will change the way we think about nature and our place within it.

FISH RIVER BUSH SOUTH AFRICA & Pocket Naturalist Guide

The wildlife of southern Africa is the major attraction for visitors to this popular region. This guide encompasses all countries south of the Zambezi and Kuene rivers: Botswana, Lesotho, Namibia, southern Mozambique, South Africa, Swaziland, and Zimbabwe. In the same format as the acclaimed Madagascar Wildlife it provides a colorful introduction to the mammals, birds, reptiles, and other wildlife, along with advice on how to make the most of a safari and even observing wildlife in everyday settings. The sheer range of habitats spanned by this region—grasslands, wetlands, desert, and bushveld—ensures that visitors have an almost unequalled opportunity for observing species in the wild, especially when the sealife and coral reefs of the coastline that fringes on two oceans are included. Accessible, comprehensive, and beautifully illustrated with around 300 photographs, this is a travelers’ companion that will appeal both to the first-time visitor and the serious naturalist.
