One remarkable ability of the human brain is to process large amounts of information about our surroundings to allow us to interact effectively with them. In everyday life, the most common way to interact with objects is by reaching, grasping, lifting and manipulating them. Although these may sound like simple tasks,

the perceptual properties of the target object, such as its location, size, shape, and orientation all need to be processed in order to set the movement parameters that allow an accurate reach-to-grasp-to lift movement. Several brain areas work in concert to process this outstanding amount of visual information and drive the execution of a motor plan in just a few hundred milliseconds. How are these processes orchestrated? In developing this type of comprehensive knowledge about the interactions between objects perception and goal-directed actions, we have a window into the mechanisms underlying the functioning of the visuo-motor system. With this research topic we aim to further understand the neural mechanisms that mediate our interactions with the world. Therefore, we particularly encourage submission of papers that attempt to relate such findings to real-world situations by investigating behavioural and neural correlates of information processing related to eye-hand coordination and visually-guided actions, including reaching, grasping, and lifting movements. This topic

welcomes submissions of original research using any relevant techniques and methods, from behavioural kinematics/kinetics, to neuroimaging and transcranial magnetic stimulation (TMS), as well as neuropsychological studies.

This book systematically introduces the development of simulation models as well as the implementation and evaluation of simulation experiments with Tecnomatix Plant Simulation. It deals with all users of Plant Simulation, who have more complex tasks to handle. It also looks for an easy entry into the program. Particular attention has been paid to introduce the simulation flow language SimTalk and its use in various areas of the simulation. The author demonstrates with over 200 examples how to combine the blocks for simulation models and how to deal with SimTalk for complex control and analysis tasks. The contents of this book ranges from a description of the basic functions of the material flow blocks to demanding topics such as the realization of a database-supported warehouse control by using the SQLite interface or the exchange of data by using XML, ActiveX, COM or DDE.

Biotin and Other Interferences in Immunoassays: A Concise Guide is aimed at clinical laboratory scientists, medical technologists and pathologists who are often the first individuals contacted by a clinician when a laboratory test result does not correlate with clinical presentation. Research scientists working in diagnostics companies will also find this information essential. Sources of errors in non-immunoassay based methods used in clinical chemistry and toxicology laboratory are also discussed so readers can get all important information from one concise guide. This succinct, user-friendly reference provides the necessary information to address high levels of biotin in clinical laboratory results. Discusses issues of biotin interferences and ways to avoid them for accurate clinical laboratory results Provides sources of errors in non-immunoassay based methods used in clinical chemistry and toxicology laboratories Highlights how to handle specimens in the lab and how to eliminate the effect of biotin in precious samples

This book is essential in understanding, investing and risk managing the holy grail of investments - structured products. The book begins by introducing structured products by way of a basic guide so that readers will be able to understand a payoff graphic, read a termsheet or assess a payoff formula, before moving on to

the key asset classes and their peculiarities. Readers will then move on to the more advanced subjects such as structured products construction and behaviour during their lifetime. It also explains how to avoid important pitfalls in products across all asset classes, pitfalls that have led to huge losses over recent years, including detailed coverage of counterparty risk, the fall of Lehman Brothers and other key aspects of the financial crisis related to structured products. The second part of the book presents an original approach to implementing structured products in a portfolio. Key features include: A comprehensive list of factors an investor needs to take into consideration before investing. This makes it a great help to any buyer of structured products; Unbiased advice on product investments across several asset classes: equities, fixed income, foreign exchange and commodities; Guidance on how to implement structured products in a portfolio context; A comprehensive questionnaire that will help investors to define their own investment preferences, allowing for a greater precision when facing investment decisions; An original approach determining the typical distribution of returns for major product types, essential for product classification and optimal portfolio implementation purposes; Written in a fresh, clear and understandable style, with many figures illustrating the products and very little mathematics. This book will enable you to better comprehend the use of structured products in everyday banking, quickly analyzing a product, assessing which of your clients it suits, and recognizing its major pitfalls. You will be able to see the added value versus the cost of a product and if the payoff is compatible with the market expectations.

Guide to Getting it On!

This book is intended for medical students, residents, and fellows, as well as medical oncologists, radiation oncologists, surgeons, general practitioners, nurses and allied health workers. Complete with case vignettes, key points, and sidebar summaries to further assist readers using practical tips and tricks, this textbook provides current information on the management and prevention of cancer-related side effects, referring to up-to-date sources that are useful for conducting further research. It also introduces new topics, such as financial toxicity and complementary medicine, as well as covering the new side effects of targeted therapies not covered in the last edition. Additionally, MASCC Textbook of Cancer Supportive Care and Survivorship, 2nd edition assembles international, multidisciplinary experts who focus on a comprehensive range of symptoms and side effects associated with cancer and its treatment. Over the last five years, much progress has been made in supportive care, helping people cope with the symptoms of cancer and cancer treatment and addressing the physical and psychosocial matters of survivorship prior to, during, and after anticancer treatment. This is central to

a patient's wellbeing and the MASCC Textbook of Cancer Supportive Care and Survivorship, 2nd edition, explores not only the diagnosis and treatment, but also the increasingly recognized complex and ongoing symptoms experienced by long term cancer survivors. Significant advances have been made, designing strategies to manage the side effects and symptoms of treatment and to prevent them from occurring, maximizing the person's ability to pursue daily activities. Reviews of the 1st edition: "This book reviews the management of cancer symptoms in patients and the side effects and late effects of treatment. The focus of the book is on supportive care and survivorship of cancer patients...The book covers symptomatology, medication and treatment, and system function of patients undergoing chemotherapy or radiation therapy...Photographs and algorithm charts further illustrate key points. This outstanding book is thorough in its explanations and easy to follow." (Arlenda C. Thompson, Doody's Review Service, January, 2011)
