Chapter 1 BLUEPRINTS

When you have read and
understood this chapter,
you should be able to
answer the following
learning objectives:

Describe blueprints and

how they are produced.

Identify the information
contained in blueprints.

Explain the proper filing of
blueprints. Blueprints

(prints) are copies of
mechanical or other types
of technical drawings. The

term blueprint reading,
means interpreting ideas
expressed by others on

drawings, whether or not
the drawings are actually

blueprints. Drawing or
sketching is the universal
language used by

engineers, technicians,
and skilled craftsmen.

Drawings need to convey
all the necessary

information to the person
who will make or
assemble the object in the
drawing. Blueprints show

the construction details of
parts, machines, ships,
aircraft, buildings,
bridges, roads, and so

forth. BLUEPRINT

PRODUCTION Original
drawings are drawn, or

traced, directly on
translucent tracing paper

or cloth, using black
waterproof India ink, a

pencil, or computer aided
drafting (CAD) systems.

The original drawing is a
tracing or “master copy.”

These copies are rarely, if

ever, sent to a shop or site. Instead, copies of the tracings are given to persons or offices where needed. Tracings that are properly handled and stored will last indefinitely. The term blueprint is used loosely to describe copies of original drawings or tracings. One of the first processes developed to duplicate tracings produced white lines on a blue background; hence the term blueprint. Today, however, other methods produce prints of different colors. The colors may be

brown, black, gray, or maroon. The differences are in the types of paper and developing processes used. A patented paper identified as BW paper produces prints with black lines on a white background. The diazo, or ammonia process, produces prints with either black, blue, or maroon lines on a white background. Another type of duplicating process rarely used to reproduce working drawings is the photostatic process in which a large camera reduces or enlarges a

tracing or drawing. The photostat has white lines on a dark background. Businesses use this process to incorporate reduced-size drawings into reports or records. The standards and procedures prescribed for military drawings and blueprints are stated in military standards (MIL-STD) and American National Standards Institute (ANSI) standards. The Department of Defense Index of Specifications and Standards lists these standards; it is issued on

31 July of each year. The following list contains common MIL-STD and ANSI standards, listed by number and title, that concern engineering drawings and blueprints.
