CHAPMAN ALICE

Applying Neuroscience to Business Practice Simon and Schuster
This unique book – the first ever on bariatric endocrinology – is a comprehensive endocrine and metabolism approach to the diseases that result from excess fat mass accumulation and adipose tissue dysfunction. It takes an approach that places adipose tissue at the center of the clinical approach to patients, as opposed to the complications of adipose tissue accumulation and dysfunction, which has been the dominant approach to date.

Initial chapters include discussion of adipose tissue physiology and pathophysiology (adiposopathy), hormonal, central nervous system, and gut microbiome regulation of energy balance and stores, and primary and secondary causes of adipose tissue weight gain. Subsequent chapters cover the evaluation and treatment of dyslipidemia, insulin resistance and hyperglycemic states, hypertension, neoplasia, and gonadal function in men and women. Management strategies, such as nutrition, physical activity, pharmacotherapy, and bariatric procedures, round out the presentation. Each chapter is bookended by bullet-pointed clinical pearls at the beginning and a full reading list at the end.

Written and edited by experts in the field of endocrinology and obesity management, *Bariatric Endocrinology* redefines practice to focus not just on weight loss as measured in pounds lost, but on adipose tissue mass and pathology, decreasing fat mass for adiposity-related diseases and returning adipose tissue to normal function.

SIDS Sudden Infant and Early Childhood Death McGraw Hill Professional

Integrative psychotherapy is a groundbreaking book where the authors present mindfulness- and compassion-oriented integrative psychotherapy (MCIP) as an integration of relational psychotherapy with the practice and research of mindfulness and compassion. The book elucidates an approach which is holistic and based on evidence-based processes of change related to the main dimensions of human experience. In this approach, mindfulness and compassion are viewed as meta-processes of change that are used within an attuned therapeutic relationship to create a powerful therapeutic model that provides transformation and growth. The authors offer an exciting perspective on intersubjective physiology and the mutual connection between the client's and therapist's autonomic nervous systems. Comprised of creatively applied research, the book will have an international appeal amongst psychotherapists/counsellors from different psychotherapy traditions and also students with advanced/postgraduate levels of experience.

Finding What Works in Health Care Springer

The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes

and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist "like evidence-based medications" are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

Health, United States, 2016, with Chartbook on Long-Term Trends in Health National Academies Press

The number of diagnosed cases of primary immunodeficiency diseases (PIDs) – a group of inborn disorders of the immune system – is growing rapidly, but misdiagnosis or late diagnosis still occurs in a significant number of patients, with serious consequences. This is the second edition of a practical reference textbook on PIDs that has been widely welcomed by scientists and clinicians from around the world. The new edition has been

extensively revised to reflect advances in knowledge and includes various PIDs not previously covered. For each disease, information is provided on definition, etiology, clinical manifestations, diagnosis, and management. This book will represent an ideal resource for specialists when engaging in diagnosis, clinical decision-making, and treatment planning. It will also prove invaluable for doctors in training and other physicians and nurses who wish to learn more about PIDs.

Heart Failure Springer

This annual overview report of national trends in health statistics contains a Chartbook that assesses the nation's health by presenting trends and current information on selected measures of morbidity, mortality, health care utilization and access, health risk factors, prevention, health insurance, and personal health-care expenditures. Chapters devoted to population characteristics, prevention, health risk factors, health care resources, personal health care expenditures, health insurance, and trend tables may provide the health/medical statistician, data analyst, biostatistician with additional information to complete experimental studies or provide necessary research for pharmaceutical companies to gain data for modeling and sampling. Undergraduate students engaged in applied mathematics or statistical compilations to graduate students completing biostatistics degree programs to include statistical inference principles, probability, sampling methods and data analysis as well as specialized medical statistics courses relating to epidemiology and other health topics may be interested in this volume. Systematic Approaches to a Successful Literature Review Elsevier

This textbook offers an up-to-date, user-friendly guide on the evaluation, diagnosis and treatment of heart failure. Each chapter is dedicated to providing comprehensive coverage of every aspect of heart failure from cardiac signs and symptoms through imaging and the genetic basis for disease to surgery, interventions, treatment and preventative cardiology. Heart Failure provides the trainee and practising cardiologist, cardiac surgeon, vascular surgeon, diabetologist, cardiac radiologist and

any physician who manages cardiac patients with a valuable resource featuring extensive guidance on the diagnosis and management of a range of conditions related to heart failure.

Pedagogical Stylistics Springer Science & Business Media

The authors of this thematic issue provide a comprehensive summary of most recent knowledge and references on quality control in wide fields. Quality control is essential for natural products like natural medicine and related food products. In this issue fifteen chapters have been included, discussing in detail various aspects of quality control. It will certainly prove useful not only for phytochemical researchers, but also many scientists working in numerous fields. Much effort has been invested by the contributors to share current information. Without their efforts and input 'Quality Control of Herbal Medicine and Related Areas' could not exist.

High Resolution Imaging in Microscopy and Ophthalmology
Springer

This book offers a global exploration of current theory and practice in the teaching of stylistics and the implementation of stylistic techniques in teaching other subjects. Pedagogical stylistics is a field that looks at employing stylistic analysis in teaching, with the aim of enabling students to better understand literature, language and also improving their language acquisition. It is also concerned with the best practice in teaching stylistics. The book discusses a broad range of interrelated topics including hypertext, English as a Foreign Language, English as a Second Language, poetry, creative writing, and metaphor. Leading experts offer focused, empirical studies on specific developments, providing in-depth examinations of both

theoretical and practical teaching methods. This interdisciplinary approach covers linguistics and literature from the perspective of current pedagogical methodology, moving from general tertiary education to more specific EFL and ESL teaching. The role of stylistics in language acquisition is currently underexplored. This contemporary collection provides academics and practitioners with the most up to date trends in pedagogical stylistics and delivers analyses of a diverse range of teaching methods.

Primary Immunodeficiency Diseases Springer

This book, written by a leading panel of experts in the field of neurosciences, provides a comprehensive overview of the pathology of neurodegenerative diseases as well as the preventive measures. Prevention is important due to the lack of early diagnostic markers and the limitations/ problems of treating neurodegenerative diseases

Knowledge and Technologies in Innovative Information Systems
IGI Global

A major resource, collecting essays, articles, manifestos, and works of art by Russian artists and critics in the early twentieth century, available again at the 100th anniversary of the Russian Revolution

Public Health Informatics and Information Systems American Psychiatric Publishing

This book presents theory, fundamentals and applications of ferroelectricity. 24 chapters gather reviews and research reports covering the spectrum of ferroelectricity. It describes the current levels of understanding of various aspects of ferroelectricity as presented by authorities in the field. Topics include relaxors, piezoelectrics, microscale and nanoscale studies, polymers and

composites, unusual properties, and techniques and devices. The book is intended for physicists, engineers and materials scientists working with ferroelectric materials.

Bariatric Endocrinology National Academies Press

Geriatric Trauma and Critical Care provides a multidisciplinary overview of the assessment and management of the elderly patient presenting with surgical pathology. By utilizing current literature and evidence-based resources, the textbook elucidates the unique nature of caring for the elderly population. The structure of the volume provides the reader with an overview of the physiologic and psychological changes, as well as the impact on the healthcare system, associated with the aging process. Emphasis is placed on the impact of aging, pre-existing medical problems, effects of polypharmacy, advanced directives and end-of-life wishes on acute surgical problems, including trauma and surgical critical care. Special attention is given to the ethical implications of management of the aged. The multidisciplinary contributors provide a unique point of view not common to surgical texts. The textbook is the definitive resource for practicing surgeons, emergency medicine physicians, intensivists, anesthesiologists, hospitalists, geriatricians, as well as surgical residents, nurses and therapists, all who care for elderly patients with surgical emergencies.

Interactive Knowledge Discovery and Data Mining in Biomedical Informatics SAGE

This title provides a comprehensive overview of clinical, epidemiological, psychobiological, psychosocial and service organization aspects of disaster psychiatry. It takes a practical approach and includes a series of reports on significant

experiences made in this field in various regions of the world. An Unbiased and reliable reference point, endorsed by the WPA Includes contributions from internationally acclaimed experts
Literary Hyperlinks Concise Springer Science & Business Media

One of the grand challenges in our digital world are the large, complex and often weakly structured data sets, and massive amounts of unstructured information. This “big data” challenge is most evident in biomedical informatics: the trend towards precision medicine has resulted in an explosion in the amount of generated biomedical data sets. Despite the fact that human experts are very good at pattern recognition in dimensions of $n = 3$; most of the data is high-dimensional, which makes manual analysis often impossible and neither the medical doctor nor the biomedical researcher can memorize all these facts. A synergistic combination of methodologies and approaches of two fields offer ideal conditions towards unraveling these problems:

Human-Computer Interaction (HCI) and Knowledge

Discovery/Data Mining (KDD), with the goal of supporting human capabilities with machine learning.
This state-of-the-art survey is an output of the HCI-KDD expert network and features 19 carefully selected and reviewed papers related to seven hot and promising research areas: Area 1: Data Integration, Data Pre-processing and Data Mapping; Area 2: Data Mining Algorithms; Area 3: Graph-based Data Mining; Area 4: Entropy-Based Data Mining; Area 5: Topological Data Mining; Area 6 Data Visualization and Area 7: Privacy, Data Protection, Safety and Security.

Closing the Quality Gap Springer

Biology of the Arterial Wall is intended as a general reference text concerned with the biology of the vascular cells and the blood vessel wall under physiological and pathological conditions. One of the major functions of the arteries is to maintain a continuous blood flow to the organs whatever the pressure conditions, thanks to the vasomotor tone of the smooth muscle cells. Great advances have been made over the last decade in the understanding of the endothelial cells as integrators and transducers of signals originating from the blood stream. The pluripotent control functions of the endothelial cells in the vessel wall are now well recognized. A review of endothelial functions and dysfunctions is presented. Cell biology and molecular genetic studies have now identified an array of molecules elaborated by endothelial cells and vascular smooth muscle cells and by the blood-borne elements which interact with artery cells, defending the artery against injury and modulating evolving abnormal processes. Molecules which induce or inhibit endothelial and/or smooth muscle cells are currently under great scrutiny. Angiogenesis, which plays a major role in tumor growth, but may also be beneficial as a healing process in muscle ischemia, is discussed. Apoptosis, or programmed cell death, has only recently been recognized as an essential process in blood vessel modeling and remodeling. An overview of apoptosis in the vascular system is presented. It is increasingly evident that the adjustments of the blood vessel wall are made in the presence of deforming disease processes such as hypertension and atherosclerosis. The second part of the book is concerned with the blood vessel wall in disease conditions. Several chapters review the role of the vessel and vascular cells in inflammation,

and vascular remodeling during arterial hypertension and aging. One chapter is devoted to atherogenesis, atheroma and plaque instability, followed by the pathophysiology of post-angioplasty restenosis, which is a crucial issue in modern interventional cardiology.

Integrative Psychotherapy Springer

Previously published as Strategic Information Management in Hospitals; An Introduction to Hospital Information Systems, Health Information Systems Architectures and Strategies is a definitive volume written by four authoritative voices in medical informatics. Illustrating the importance of hospital information management in delivering high quality health care at the lowest possible cost, this book provides the essential resources needed by the medical informatics specialist to understand and successfully manage the complex nature of hospital information systems. Author of the first edition's Foreword, Reed M. Gardner, PhD, Professor and Chair, Department of Medical Informatics, University of Utah and LDS Hospital, Salt Lake City, Utah, applauded the text's focus on the underlying administrative systems that are in place in hospitals throughout the world. He wrote, "These challenging systems that acquire, process and manage the patient's clinical information. Hospital information systems provide a major part of the information needed by those paying for health care." their components; health information systems; architectures of hospital information systems; and organizational structures for information management.

Enhancing Cognitive Fitness in Adults Bloomsbury Publishing
Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic

reviews for the best summary of the evidence. Systematic reviews identify, select, assess, and synthesize the findings of similar but separate studies, and can help clarify what is known and not known about the potential benefits and harms of drugs, devices, and other healthcare services. Systematic reviews can be helpful for clinicians who want to integrate research findings into their daily practices, for patients to make well-informed choices about their own care, for professional medical societies and other organizations that develop clinical practice guidelines. Too often systematic reviews are of uncertain or poor quality. There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled, how evidence is appraised, and the overall scientific rigor of the process. In *Finding What Works in Health Care* the Institute of Medicine (IOM) recommends 21 standards for developing high-quality systematic reviews of comparative effectiveness research. The standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain. *Finding What Works in Health Care* also proposes a framework for improving the quality of the science underpinning systematic reviews. This book will serve as a vital resource for both sponsors and producers of systematic reviews of comparative effectiveness research.

The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder American Psychiatric Publishing

This revised edition covers all aspects of public health informatics

and discusses the creation and management of an information technology infrastructure that is essential in linking state and local organizations in their efforts to gather data for the surveillance and prevention. Public health officials will have to understand basic principles of information resource management in order to make the appropriate technology choices that will guide the future of their organizations. Public health continues to be at the forefront of modern medicine, given the importance of implementing a population-based health approach and to addressing chronic health conditions. This book provides informatics principles and examples of practice in a public health context. In doing so, it clarifies the ways in which newer information technologies will improve individual and community health status. This book's primary purpose is to consolidate key information and promote a strategic approach to information systems and development, making it a resource for use by faculty and students of public health, as well as the practicing public health professional. Chapter highlights include: The Governmental and Legislative Context of Informatics; Assessing the Value of Information Systems; Ethics, Information Technology, and Public Health; and Privacy, Confidentiality, and Security. Review questions are featured at the end of every chapter. Aside from its use for public health professionals, the book will be used by schools of public health, clinical and public health nurses and students, schools of social work, allied health, and environmental sciences.

Practice Guideline for the Treatment of Patients with Major Depressive Disorder Springer Science & Business Media

This manual provides the American Psychiatric Association's

guidelines for the treatment of patients with major depressive disorder. It is divided into three sections, covering treatment recommendations; background information and review of available evidence; and future research needs. It seeks to summarize the specific forms of somatic, psychotherapeutic, psychosocial and educational treatments that have been developed to deal with major depressive disorder.

Psychosocial Interventions for Mental and Substance Use Disorders Karger Medical and Scientific Publishers

This volume covers aspects of sudden infant and early childhood death, ranging from issues with parental grief, to the most recent theories of brainstem neurotransmitters. It also deals with the changes that have occurred over time with the definitions of SIDS

(sudden infant death syndrome), SUDI (sudden unexpected death in infancy) and SUDIC (sudden unexpected death in childhood). The text will be indispensable for SIDS researchers, SIDS organisations, paediatric pathologists, forensic pathologists, paediatricians and families, in addition to residents in training programs that involve paediatrics. It will also be of use to other physicians, lawyers and law enforcement officials who deal with these cases, and should be a useful addition to all medical examiner/forensic, paediatric and pathology departments, hospital and university libraries on a global scale. Given the marked changes that have occurred in the epidemiology and understanding of SIDS and sudden death in the very young over the past decade, a text such as this is very timely and is also urgently needed.
