Yet over and over again they found a significant percentage are able to overcome their life circumstances and achieve spectacular success. How is it that individuals who are not “supposed” to succeed manage to overcome the odds? Are there certain traits that such people have in common? Can the rest of us learn from their success and apply it to our own lives? In <i>Succeeding When You’re Supposed to Fail</i>, Rom Brafman, psychologist and coauthor of the bestselling book <i>Sway</i>, set out to answer these questions. In a riveting narrative that interweaves compelling stories from education, the military, and business and a wide range of groundbreaking new research, Brafman identifies the six hidden drivers behind unlikely success. Among them: <ul style="list-style-type: none"><li>•The critical importance of the Limelight Effect—our ability to redirect the focus of our lives to the result of our own efforts, as opposed to external forces</li> <li>•The value of a satellite in our lives—the remarkable way in which a consistent ally who accepts us unconditionally while still challenging us to be our best can make a huge difference</li> <li>•The power of temperament—people who are able to tunnel through life’s obstacles have a surprisingly mild disposition; they don’t allow the bumps in the road to unsettle them</li></ul>By understanding and incorporating these strat-egies in our own lives, Brafman argues, we can all be better prepared to overcome the inevitable obstacles we face, from setbacks at work to chall-enges in our personal lives.</p> <p><b>Why We Buy</b> Penguin</p> <p>Humans have always used denial. When we are afraid, guilty, confused, or when something interferes with our self-image, we tend to deny it. Yet denial is a delusion. When it impacts on the health of oneself, or society, or the world it becomes a pathology. Climate change denial is such a case. Paradoxically, as the climate science has become more certain, denial about the issue has increased. The paradox lies in the denial. There is a denial industry funded by the fossil fuel companies that literally denies the science, and seeks to confuse the public. There is denial within governments, where spin-doctors use 'weasel words' to pretend they are taking action. However there is also denial within most of us, the citizenry. We let denial prosper and we resist the science. It also explains the social science behind denial. It contains a detailed examination of the principal climate change denial arguments, from attacks on the integrity of scientists, to impossible expectations of proof and certainty to the cherry picking of data. Climate change can be solved - but only when we cease to deny that it exists. This book shows how we can break through denial, accept reality, and thus solve the climate crisis. It will engage scientists, university students, climate change activists as well as the general public seeking to roll back denial and act.</p> <p><b>Environment, Media and Communication</b> Citadel Press</p> <p>This early work by Radclyffe Hall was originally published in 1928 and we are now republishing it with a brand new introductory biography. 'The Well of Loneliness' is a novel that follows an upper-class Englishwoman who falls in love with another woman while serving as an ambulance driver in World War I. Marguerite Radclyffe Hall was born on 12th August 1880, in Bournemouth, England. Hall's first novel <i>The Unlit Lamp</i> (1924) was a lengthy and grim tale that proved hard to sell. It was only published following the success of the much lighter social comedy <i>The Forge</i> (1924), which made the best-seller list of John O'London's <i>Weekly</i>. Hall is a key figure in lesbian literature for her novel <i>The Well of Loneliness</i> (1928). This is her only work with overt lesbian themes and tells the story of the life of a masculine lesbian named Stephen Gordon.</p> <p><b>Climate Change Science: A Modern Synthesis</b> Springer Nature</p> <p>The Most Important Comic Book On Earth is a global collaboration for planetary change, bringing together a diverse team of 300 leading environmentalists, artists, authors, actors, filmmakers, musicians, and more to present over 120 stories to save the world. Media representations of climate issues – from news to entertainment – are powerful and important links between people's everyday realities and experiences, and the ways in which they are discussed by scientists, policymakers and public actors. A dynamic mix of influences – from internal workings of mass media such as journalistic norms, to external political, economic, cultural and social factors – shape what becomes a climate 'story'. Providing a bridge between academic considerations and real world developments, this book helps students, academic researchers and interested members of the public make sense of media reporting on climate change as it explores 'who speaks for climate' and what effects this may have on the spectrum of possible responses to contemporary climate challenges.</p> <p><b>Ghana Must Go</b> Oxford University Press</p> <p>Inspired by her social studies unit on social movements, Arlene enlists her friends to launch a campaign to start recycling and reduce their school's carbon footprint.</p> <p><i>Reasoning with Democratic Values 2.0, Volume 1</i> Dial Press</p> <p>NEW YORK TIMES BESTSELLER New York Times bestselling author and acclaimed linguist John McWhorter argues that an illiberal neoracism, disguised as antiracism, is hurting Black communities and weakening the American social fabric. Americans of good will on both the left and the right are secretly asking themselves the same question: how has the conversation on race in America gone so crazy? We’re told to read books and listen to music by people of color but that wearing certain clothes is “appropriation.” We hear that being white automatically gives you privilege and that being Black makes you a victim. We want to speak up but fear we’ll be seen as unwoke, or worse, labeled a racist. According to John McWhorter, the problem is that a well-meaning but pernicious form of antiracism has become, not a progressive ideology, but a religion—and one that’s illogical, unreachable, and unintentionally neoracist. In <i>Woke Racism</i>, McWhorter reveals the workings of this new religion, from the original sin of “white privilege” and the weaponization of cancel culture to ban heretics, to the evangelical fervor of the “woke mob.” He shows how this religion that claims to “dismantle racist structures” is actually harming his fellow Black Americans by infantilizing Black people, setting Black students up for failure, and passing policies that disproportionately damage Black communities. The new religion might be called “antiracism,” but it features a racial essentialism that’s barely distinguishable from racist arguments of the past. Fortunately for Black America, and for all of us, it’s not too late to push back against woke racism. McWhorter shares scripts and encouragement with those trying to deprogram friends and family. And most importantly, he offers a roadmap to justice that actually</p>

Willa Cather’s <i>O Pioneers!</i> was first published in June of 1913 by Houghton Mifflin to high praise. Cather was immensely proud of the work and considered it her first “true” novel, having discovered her own form and subject. Told in five parts, <i>O Pioneers!</i> follows the Bergsons, a family of Swedish-American immigrants farming the prairie of Nebraska at the turn of the 20th century. After the death of her father, heroine Alexandra Bergson inherits the family farm, using her insight to transform it from a precarious enterprise to a prosperous one over the following decade. As the Nebraskan farming community grows and her older brothers build families and comfortable lives, Alexandra remains independent, attached only to the land, her youngest brother, Emil, and her neighbor, Marie Shabata. These three central characters navigate duty, familial pressures, tragedy, and uncertain romance. With its independent, entrepreneurial female main character, <i>O Pioneers!</i> can be read as a deeply feminist novel that nevertheless upholds American ideals of national destiny through pastoral settlement.

For decades the liberal class was a defense against the worst excesses of power. But the pillars of the liberal class -- the press, universities, the labor movement, the Democratic Party, and liberal religious institutions -- have collapsed. In its absence, the poor, the working class, and even the middle class no longer have a champion. In this searing polemic Chris Hedges indicts liberal institutions, including his former employer, the <i>New York Times</i> , who have distorted their basic beliefs in order to support unfettered capitalism, the national security state, globalization, and staggering income inequalities. Hedges argues that the death of the liberal class created a profound vacuum at the heart of American political life. And now speculators, war profiteers, and demagogues -- from militias to the Tea Party -- are filling the void.

New York Times Bestseller • Named one of the Best Books of the Year by NPR, O: The Oprah Magazine, San Francisco Chronicle, Christian Science Monitor and Newsweek “Kingsolver brilliantly captures both the price of profound change and how it can pave the way not only for future generations, but also for a radiant, unexpected expansion of the heart.” — O: The Oprah Magazine The acclaimed author of *The Poisonwood Bible* and *The Bean Trees*, and recipient of numerous literary awards—including the National Humanities Medal, the Dayton Literary Peace Prize, and the Orange Prize—returns with a story about two families, in two centuries, navigating what seems to be the end of the world as they know it. With history as their tantalizing canvas, these characters paint a startlingly relevant portrait of life in precarious times when the foundations of the past have failed to prepare us for the future. How could two hardworking people do everything right in life, a woman asks, and end up destitute? Willa Knox and her husband followed all the rules as responsible parents and professionals, and have nothing to show for it but debts and an inherited brick house that is falling apart. The magazine where Willa worked has folded; the college where her husband had tenure has closed. Their dubious shelter is also the only option for a disabled father-in-law and an exasperating, free-spirited daughter. When the family’s one success story, an Ivy-educated son, is uprooted by tragedy he seems likely to join them, with dark complications of his own. In another time, a troubled husband and public servant asks, How can a man tell the truth, and be reviled for it? A science teacher with a passion for honest investigation, Thatcher Greenwood finds himself under siege: his employer forbids him to speak of the exciting work just published by Charles Darwin. His young bride and social-climbing mother-in-law bristle at the risk of scandal, and dismiss his worries that their elegant house is unsound. In a village ostensibly founded as a benevolent Utopia, Thatcher wants only to honor his duties, but his friendships with a woman scientist and a renegade newspaper editor threaten to draw him into a vendetta with the town’s powerful men. A timely and “utterly captivating” novel (San Francisco Chronicle), *Unsheltered* interweaves past and present to explore the human capacity for resiliency and compassion in times of great upheaval.

A provocative and urgent essay collection that asks how we can live with hope in “an age of ecocide” Paul Kingsnorth was once an activist—an ardent environmentalist. He fought against rampant development and the depredations of a corporate world that seemed hell-bent on ignoring a looming climate crisis in its relentless pursuit of profit. But as the environmental movement began to focus on “sustainability” rather than the defense of wild places for their own sake and as global conditions worsened, he grew disenchanted with the movement that he once embraced. He gave up what he saw as the false hope that residents of the First World would ever make the kind of sacrifices that might avert the severe consequences of climate change. Full of grief and fury as well as passionate, lyrical evocations of nature and the wild, *Confessions of a Recovering Environmentalist* gathers the wave-making essays that have charted the change in Kingsnorth’s thinking. In them he articulates a new vision that he calls “dark ecology,” which stands firmly in opposition to the belief that technology can save us, and he argues for a renewed balance between the human and nonhuman worlds. This iconoclastic, fearless, and ultimately hopeful book, which includes the much-discussed “Uncivilization” manifesto, asks hard questions about how we’ve lived and how we should live.

“Brilliant and fundamental, this is the necessary book about our prime global emergency. Here you’ll find the facts, the processes, the physics of our complex and changing climate, but delivered with eloquence and urgency. Lawrence Krauss writes with a clarity that transcends mere politics. Prose and poetry were never better bedfellows.” —Ian McEwan, Booker Prize-winning author of *Solar and Machines Like Me* “The ideal book for understanding the science of global warming..at once elegant, rigorous, and timely.” — Elizabeth Kolbert, Pulitzer Prizewinning author of *The Sixth Extinction* “A brief, brilliant, and charming summary of what physicists know about climate change and how they learned it.” —Sheldon Glashow, Nobel Laureate in Physics, Metcalf Distinguished Professor Emeritus, Boston University “The distinguished scientist Lawrence Krauss turns his penetrating gaze on the most pressing existential threat facing our world: climate change. It is brimming with information lucidly analysed. Such hope as there is lies in science, and a physicist of Dr. Krauss’s imaginative versatility is unusually qualified to offer it.” —Richard Dawkins, author of *The Blind Watchmaker* and *Science in the Soul* “Lucid and gripping, this study of the most severe challenge humans have ever faced leads the reader from the basic physics of climate change to recognition of the damage that humans have already caused and on to the prospects that lie ahead if we do not change course soon.” —Noam Chomsky, Laureate Professor, University of Arizona, author of *Internationalism or Extinction?* “Lawrence Krauss tells the story of climate change with erudition, urgency, and passion. It is our great good luck that one of our most brilliant scientists is also such a gifted writer. This book will change the way we think about the future.” —Jennifer Finney Boylan, author of *Good Boy* and *She’s Not There* “Everything on climate change that I’ve seen is either dumbed down and bossy or written for other climate scientists. I’ve been looking for a book that can let me, a layperson, understand the science. This book does just what I was looking for. It is important.” —Penn Jillette, Magician, author of *Presto!* and *God, No!* “The renowned physicist Lawrence Krauss makes the science behind one of the most important issues of our time accessible to all.” —Richard C. J. Somerville, Distinguished Professor Emeritus, Scripps Institution of Oceanography, University of California, San Diego “Lawrence Krauss is a fine physicist, a talented writer, and a scientist deeply engaged with public affairs. His book deserves wide readership. During one month in the autumn of election year 2000, scores of movie-business strivers are focused on one goal: getting a piece of an elusive, but surely huge, television saga, the one that opens with Huns sweeping through Mongolia and closes with a Mormon diviner in the Las Vegas desert; the sure-to-please-everyone multigenerational TV miniseries about diviners, those miracle workers who bring water to perpetually thirsty (and hungry and love-starved) humankind. Among the wannabes: Vanessa Meandro, hot-tempered head of Means of Production, an indie film company; her harried and varied staff; a Sikh cab driver, promoted to the office of -theory and practice of TV; a bipolar bicycle messenger, who makes a fateful mis-delivery; two celebrity publicists, the Vanderbilt girls; a thriller writer who gives Botox parties; the daughter of an L.A. big-shot, who is hired to fetch Vanessa’s Krispy Kremes and more; a word man who coined the phrase -

- inspired by a true story; and a supreme court justice who wants to write the script.A few true artists surface in the course of Moody’s rollicking but intricately woven novel, and real emotion eventually blossoms for most of Vanessa’s staff at Means of Production, even herself. *The Diviners* is a cautionary tale about pointless ambition; a richly detailed look at the interlocking worlds of money, politics, addiction, sex, work, and family in modern America; and a masterpiece of comedy that will bring Rick Moody to a still higher level of appreciation.

The fascinating story of the most powerful source of energy the earth can yield Uranium is a common element in the earth’s crust and the only naturally occurring mineral with the power to end all life on the planet. After World War II, it reshaped the global order-whoever could master uranium could master the world. Marie Curie gave us hope that uranium would be a miracle panacea, but the Manhattan Project gave us reason to believe that civilization would end with apocalypse. Slave labor camps in Africa and Eastern Europe were built around mine shafts and America would knowingly send more than six hundred uranium miners to their graves in the name of national security. Fortunes have been made from this yellow dirt; massive energy grids have been run from it. Fear of it panicked the American people into supporting a questionable war with Iraq and its specter threatens to create another conflict in Iran. Now, some are hoping it can help avoid a global warming catastrophe. In *Uranium*, Tom Zoellner takes readers around the globe in this intriguing look at the mineral that can sustain life or destroy it.

The award-winning climate scientist Michael E. Mann and the Pulitzer Prize-winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers. They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions. The lessons they have learned have been invaluable, inspiring this brilliant, colorful escape hatch from the madhouse of the climate wars. *The Madhouse Effect* portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth’s climate. Toles’s cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies. Mann’s expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus. The synergy of these two climate science crusaders enlivens the gloom and doom of so many climate-themed books—and may even convert die-hard doubters to the side of sound science.

The award-winning cartoonist offers “a witty history of the planet” for young readers—covering everything from the Big Bang to climate change (Publishers Weekly). Almost 14.5 billion years ago, it all started with a Big Bang. What began as a cloud of gas, dust, and rock eventually took shape and bloomed into a molten sphere. Battered by asteroid collisions, ice ages, and shifting tectonic plates, our fledgling planet finally pushed forth continents. But if you think the earth has calmed down since then—think again! In this illustrated history of earth, the Sibert Honor medalist Don Brown teams up with geologist Michael Perfit to tell the strange-but-true saga of our planetary home. A knowledgeable groundhog and his earthworm sidekick take young readers through a wide range of topics—from solar energy and liquid magma to the ozone layer and the formation of mountains. Plus mini-biographies of scientists are included throughout. “A guaranteed hit with science lovers and a best bet for convincing skeptics that science is indeed a grand and exciting adventure.” —Kirkus Reviews
