Measuring

Inequality

National
Geographic
Books

In December
2004, the
National
Academy of

Sciences
sponsored a
colloquium on
"Systematics
and the Origin
of Species" to
celebrate
Ernst Mayr's

100th anniversary and to explore current knowledge concerning the origin of species. In 1942, Ernst Mayr, one of the twentieth century's greatest scientists, published *Systematics and the Origin of Species*, a seminal book of the modern theory of evolution, where he advanced the significance of population variation in the understanding of evolutionary process and

the origin of new species. Mayr formulated the transition from Linnaeus's static species concept to the dynamic species concept of the modern theory of evolution and emphasized the species as a community of populations, the role of reproductive isolation, and the ecological interactions between species. In addition to a preceding essay by Edward O. Wilson, this book includes

the 16 papers presented by distinguished evolutionists at the colloquium. The papers are organized into sections covering the origins of species barriers, the processes of species divergence, the nature of species, the meaning of "species," and genomic approaches for understanding diversity and speciation.

The Sea Book
Cambridge University Press
The 'clash of

civilisations' so often talked about in connection with relations between the West and Arab nations is, argues Richard Bulliet, no more than dangerous sophistry based on misconceptions in American government. He sets out the common ground between Islam and Christianity. Nation Against Nation Westport, Conn. : Greenwood Press This book is a groundbreaking

g history of balance, exploring how a new model of equilibrium emerged during the medieval period. **The Chronicle of Akakor** Penguin This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the

United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format

that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Nature, Technology and Cultural Change in Twentieth-Century German Literature
Wipf and Stock Publishers

This book traces shifting attitudes towards science and technology, nature and the environment in Twentieth-century Germany. It approaches them through discussion of a range of literary texts and explores the philosophical influences on them and their political contexts, and asks what part novels and plays have played in environmental debate.

Why are trees so important?
How many types are there? How do they benefit the environment and wildlife?
This book, by the award-winning author Piotr Socha, answers these questions and more, tracking the history of trees from the time of the dinosaurs to the current day.
Mister Cleghorn's Seal
Springer
Tony Conrad

(b. 1940) has been a well-known American artist for more than 50 years. Celebrated as a musician, filmmaker, video and performance artist, he achieved his breakthrough in 1966 with the experimental film *The Flicker*. In addition to his film work (including the so called *Yellow Movies*), his violin performances have also achieved broad recognition. This

monograph focuses on about 70 video works produced by the artist since 1977, which previously have not been systematically studied. Beginning from Conrad's earlier rather materialistic approach, in A videographic view of the artist's vita the text follows the artists shift from experimental film to a more image-driven videographic approach. The chapter Last call for video comments on

Tony Conrad influential interaction with the Buffalo-based group of appropriation artists. Then Video as critique of television interrogates the interplay between (video) art and society as a reflection of the telematic culture of the 1980s. The last chapter, *Video in tension with music*, returns to the beginning of the artist's career and comments on Tony Conrad's identity as a musician.

Piotr Uklanski,
 a New York
 based artist,
 has put
 together a
 most
 surprising and
 at the same
 time simple
 series of
 pictures. With

them he has
 created an art
 book
 consisting of
 160 portraits
 of movie
 actors playing
 Nazis. This
 volume is as
 much about
 history as it is
 about the
 industry of
 entertainment
 . In 1998, The
 Observer,
 London, wrote
 about these
 compelling
 and at the
 same time
 enstranging
 portraits: "If
 you are an
 actor, chances
 are that you
 will play a
 Nazi, or at
 least a cruel
 German
 officer in the
 Second World

War. How do
 you make
 yourself look
 the part? First
 comes the
 matter of
 expression.
 Mug up on
 verbal cliches:
 'ice-cold eyes',
 'thin,
 compressed
 lips', with if
 possible, 'the
 hint of cynical
 smile playing
 around the
 corners of the
 mouth'. An 'air
 of cold
 command',
 rigid jaw
 muscles
 denoting
 'utter
 ruthlessness',
 a tiny flare of
 nostrils to
 suggest
 unspeakable
 depths of
 sadism. Fine!

Now put on the gear: the tunic with its collar-tabs of SS lightning flashes, the tall black cap with eagle, swastika and death's head. Stunning! Now all you need is that gargling accent unlike any noise ever uttered by a real German." **Success and Understanding** Routledge This unusual volume seeks to accomplish three related goals: * to assess the extent and limits of media power in election campaigns * to extend the

concept of media agenda-setting to include the contributions of powerful news sources in the process of election agenda formation * to evaluate the impact of national system variables (differences in political and media systems) on the balance of party and media forces in the formation of campaign agendas In the process, it searches for ways of measuring the

discretionary power of the media in electoral politics, testing this in terms of the relative ability of journalists and politicians to shape election campaign agendas. **Leadership and Ambiguity** Oxford University Press, USA A detailed look at the hidden agenda within Israel's Mossad intelligence agency. The Baltic Sea Area New York : HarperCollins In this timely

and urgent work, Hans Kung reminds us: - Every minute, the nations of the world spend 1.8 million dollars on military armaments; - Every hour, 1500 children die of hunger-related causes; - Every week during the 1980s, more people were detained, tortured, assassinated, made refugee, or in other ways violated by acts of repressive regimes than at any other time in history; -

Every month, the world's economic system adds over 7.5 billion dollars to the catastrophically unbearable debt burden of more than 1.5 trillion dollars now resting on the shoulders of Third World peoples; - Every year, an area of tropical forest three-quarters the size of Korea is destroyed and lost; - Every decade, if present global warming trends continue, the temperature of the earth's atmosphere could rise

dramatically with a resultant rise in sea levels that would have disastrous consequences, particularly for coastal areas of all the earth's land masses. In 'Global Responsibility', the author offers important new approaches and concludes that: - There can be no peace among the nations without peace among the religions. - There can be no peace among the religions without

dialogue between the religions. - There can be no ongoing human society without a global ethic.

God Shock
Columbia University Press
Uwe Timm was born in Germany in 1940. Just three years later his brother, Karl-Heinz, who was sixteen years his senior and a sapper in the elite SS Death's Head Division, was killed. His notebook was returned to the family, and the last

entry read- 'I close my diary here because I don't see any point in recording the cruel things that sometimes happen.'
When Timm decided to write this astonishing memoir, he feared the possibility that his brother's unit had taken part in the shooting of civilians and Jews. Yet he wanted to piece together his brother's experience, and also that of his nation, which once considered the qualities

of an SS man so exemplary. As Timm unleashes his memories of this devastating time, he also pinpoints the questions that his parents' generation seemed unable to face, and offers new insights into the impact of the war on ordinary Germans.

A History of Balance, 1250-1375
Princeton University Press
The impetus to write this book grew out of curiosity and

frustration. For a research project in which I was involved, I wanted to select an appropriate index to measure inequality, so I searched for a book that comprehensively reviewed the available indexes, identified their operational similarities and differences, and clarified their theoretical underpinnings. Discovering that no such book existed, I became increasingly frustrated and

curious. It became evident that I would have to undertake my own systematic review of the literature, presumably in my own discipline, in order to identify the alternative measures and choose an appropriate one on the basis of proper theoretical and methodological criteria. This effort led to additional frustrating discoveries. First, I encountered a bewildering

abundance of inequality indexes well over fifty distinguishable measures. Second, my review of the methodological literature on inequality measurement took me through the issues of literally scores of professional journals in five academic disciplines- economics, geography, political science, sociology, and statistics. Third, although I found some cross-disciplinary referencing of

inequality
measures, by
and large
each
discipline's
inequality
measurement
remained
insulated from
that of other
disciplines.

accompanied
by bright,
bold, and
beautiful
illustrations,
this ebook
takes children
on a journey
through the
sea and all its
zones. This
charming

celebration of
the sea shows
children how
extraordinary
our oceans
are and is a
reminder that
it is up to us
to keep it that
way. The Sea
Book is the
coolest
educational
ebook about
the sea,
covering a
wealth of sea
animals,
including
mammals,
fish,
invertebrates,
and reptiles. It
explores the
underwater
worlds of
incredible
marine life
and their
habitats. From
up on the ice,
down to

colorful coral
reefs,
underwater
forests, and
right down to
the deepest
darkest
depths where
the weird and
wonderful lurk
- it's sure to
delight any
ocean
obsessed
child.
Following on
from The Bee
Book,
Charlotte
Milner
continues to
highlight
critical
environmental
issues faced
by our planet.
This time the
focus is on our
watery friends
and the
damaging
effects

humans are having on our seas. The perfect introduction to ocean conservation packaged in a way that won't leave children (or their parents for that matter) fearing for life on earth. Children will discover what they can do to help, and there are fantastic tips on how to live plastic-free as well. Kids will also get to craft their own recycled shopping bag too! Dive Into A Watery World What lies beneath

the waves? Life can be found everywhere in the sea - from the sunlit ocean surface to the darkest depths. The sea is home to a variety of life, which makes it a fascinating, exciting, and significant place. There are more than 33 000 types of fish. Some fish can fly, some can dance, some are flat, and some are long. The sea has forests, ice, and exciting critters too. This adorable kid's ebook is

the perfect meet-cute for kids and our beautiful oceans. Discover our oceans in a whole new way, learning about: - Why the sea is important - What lies beneath the waves - Life on the ice - Changing seas and plastic problems - How you can help and much, much more! This delightful book is one of three children's books on conservation for your little ones to enjoy. Try The Bat

Book and The Bee Book next! <i>Movie Comedy Teams</i> Routledge This text examines the impact of climate change on freshwater ecosystems, past, present and future. It especially considers the interactions between climate change and other drivers of change including hydromorphol ogical modification, nutrient loading, acid deposition and contamination by toxic	substances using evidence from palaeolimnolo gy, time-series analysis, space-for-time substitution, laboratory and field experiments and process modelling. The book evaluates these processes in relation to extreme events, seasonal changes in ecosystems, trends over decadal-scale time periods, mitigation strategies and ecosystem recovery. The book is also concerned	with how aspects of hydrophysical, hydrochemical and ecological change can be used as early indicators of climate change in aquatic ecosystems and it addresses the implications of future climate change for freshwater ecosystem management at the catchment scale. This is an ideal book for the scientific research community, but is also accessible to Masters and senior
