"German Soldiers World War II letters"--

Betriebswirtschaft Little, Brown

It is widely acknowledged that many financial modelling techniques failed during the financial crisis, and in our post-crisis environment many techniques are being reconsidered. This single volume provides a guide to lessons learned for practitioners and a reference for academics. Including reviews of traditional approaches, real examples, and case studies, contributors consider portfolio theory; methods for valuing equities and equity derivatives, interest rate derivatives, and hybrid products; and techniques for calculating risks and implementing investment strategies. Describing new approaches without losing sight of their classical antecedents, this collection of original articles presents a timely perspective on our post-crisis paradigm. Highlights pre-crisis best classical practices, identifies post-crisis key issues, and examines emerging approaches to solving those issues Singles out key factors one must consider when valuing or calculating risks in the post-crisis environment Presents material in a homogenous, practical, clear, and not overly technical manner

Austria, Germany, and Switzerland are increasingly relying on hybridization at the nexus of vocational training and higher education to increase permeability and reform their highly praised systems of collective skill formation. This historical and organizational institutionalist study compares these countries to trace the evolution of their skill regimes from the 1960s to today's

era of Europeanization, focusing especially on the impact of the Bologna and Copenhagen processes.

Gathered from the popular website www.StellaAwards.com, The True Stella Awards is an outrageous collection of America's most frivolous lawsuits Named for Stella Liebeck, the woman who won a multimillion-dollar lawsuit after spilling hot McDonald's coffee on herself, humorist Randy Cassingham's popular website chronicles the hard-to-believe and amusing claims brought before the U.S.courts. The most ridiculous of these lawsuits are given the "honorable" Stella Award. In The True Stella Awards, Cassingham documents the most outlandish of these real-life cases, including:
* The man who legally changed his name to Jack Ass, and then sued MTV because their TV show and movie Jackass infringed on his trademark and demeaned his "good name"
* The songwriter who left a minute's silence on his record only to be sued by the estate of another songwriter who copyrighted his own "silent" song
* The man who sued an amusement park after being the victim of the ultimate "act of God": He was hit by lightning while standing next to his own car in the parking lot Stunning and hilarious, The True Stella Awards reveals the extremes people will go to in the pursuit of "justice."

In MiniMax Interventions, Manfred Prior presents therapeutic communication strategies that are designed to achieve a lot with just a few linguistic alterations: maximum results for minimal effort. These tried-and-tested communication strategies can be used in an effective way by any therapeutic practitioner, in almost any kind of session. The step-by-step methods can make a huge contribution to helping patients and clients solve their problems and clarify their goals more quickly. They are easy to understand and put into practice and, as such, their profound effect will be

readily observable. It takes a lot of time and experience to condense such a lot of information into such a short book, and such powerful transformative effects into short therapeutic phrases. Manfred Prior has studied the speech patterns of successful communication in psychotherapy, medicine and counselling for more than 30 years. As one of the most renowned hypnosis instructors in the German-speaking world, he has taught effective communication techniques and methods to psychotherapists, doctors and dentists since the mid-eighties. For the first time, his insights are now available in the English-speaking world. The book, originally published in German as the bestselling MiniMax-Interventionen: 15 minimale Interventionen mit maximaler Wirkung, is translated by Professor Paul Bishop. MiniMax interventions provide the basis for efficient communication as well as human encounter. They help reduce resistance from patients or more precisely do not let it build up. They strengthen the relationship between therapist and patient and build motivation and willingness to cooperate. Finally, they demonstrate time and again how a few short words can have long-lasting therapeutic consequences. Suitable for psychotherapists, counsellors, supervisors, coaches and organisational consultants. If you want to improve your communication skills in a decisive yet practical way this succinct, accessible book is for you.

One of the central features in current educational reforms is a focus on learning outcomes. Many countries have established or revised standards to describe what teachers are supposed to teach and students are expected to learn. More recently, the emphasis has shifted to considerations of how standards can be

operationalized in order to make the outcomes of educational efforts more tangible. This book is the result of a symposium held in Kiel, that was arranged by two science education groups, one at the IPN (Leibniz-Institute for Science and Mathematics Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together renowned experts from 12 countries with different notions of the nature and quality of learning outcomes. The aim was to clarify central conceptions and approaches for a better understanding among the international science education community. The book is divided into five parts. In Part A, the organizers set the scene, describing the rationale for arranging the symposium. Part B provides a broad overview about different approaches, challenges, and pitfalls on the road to the clarification of meaningful and fruitful learning outcomes. The set of papers in Part C provides deep insights into different, although comparable approaches which aim to frame, to assess, and to promote learning and learning outcomes in science education. Smaller projects are presented as well as broad, coordinated national programs. The papers in Part D outline the individual historical development from different national perspectives, reflecting the deficits and problems that led to current reforms. Finally, a summary of the organizers analyses the conclusions from different vantage points.

"Much has been written about how awful the German Democratic Republic supposedly was: a people imprisoned by a wall and subjugated by an omnipresent Stasi security apparatus. Such descriptions are based largely on prejudice, ignorance and wilful animosity. This book is an attempt to provide a more balanced evaluation and to examine GDR-style socialism in terms of what we can learn from it. The authors, while not ignoring the real deficiencies of GDR society, emphasise the many aspects that were positive, and demonstrate that alternative ways of organising society are possible. This volume is an updated and much expanded edition of the authors' booklet first published in 2009. They have added more detail on how the GDR came into being as a separate state, about how society functioned and what values determined the every-day life of its citizens. There is also a whole new section on what happened in the aftermath of unification, particularly to the economy. While unification brought East Germans access to a more affluent society, freedom to travel throughout the world and the end to an over-centralised political system, it also brought with it unemployment, social breakdown and loss of hope, particularly in the once thriving rural areas." -- From back cover.

A study of aggression from the renowned social psychologist and New York Times–bestselling author of *The Art of Loving* and *Escape from Freedom*. Throughout history, humans have shown an incredible talent for destruction as well as creation. Aggression has driven us to great heights and brutal lows. In *The Anatomy of Human Destructiveness*, renowned social psychologist Erich Fromm discusses the differences between forms of aggression typical for animals and two very specific forms of destructiveness that can only be found in human beings: sadism and necrophilic destructiveness. His case studies span zoo animals, necrophiliacs, and the psychobiographies of notorious figures such as Adolf

Hitler and Joseph Stalin. Through his broad scholarship, Fromm offers a comprehensive exploration of the human impulse for violence. This ebook features an illustrated biography of Erich Fromm including rare images and never-before-seen documents from the author's estate.

Universal basic income. A 15-hour workweek. Open borders. Does it sound too good to be true? One of Europe's leading young thinkers shows how we can build an ideal world today. "A more politically radical Malcolm Gladwell." -- New York Times
After working all day at jobs we often dislike, we buy things we don't need. Rutger Bregman, a Dutch historian, reminds us it needn't be this way -- and in some places it isn't. Rutger Bregman's TED Talk about universal basic income seemed impossibly radical when he delivered it in 2014. A quarter of a million views later, the subject of that video is being seriously considered by leading economists and government leaders the world over. It's just one of the many utopian ideas that Bregman proves is possible today. *Utopia for Realists* is one of those rare books that takes you by

surprise and challenges what you think can happen. From a Canadian city that once completely eradicated poverty, to Richard Nixon's near implementation of a basic income for millions of Americans, Bregman takes us on a journey through history, and beyond the traditional left-right divides, as he champions ideas whose time have come. Every progressive milestone of civilization -- from the end of slavery to the beginning of democracy -- was once considered a utopian fantasy. Bregman's book, both challenging and bracing, demonstrates that new utopian ideas, like the elimination of poverty and the creation of the fifteen-hour workweek, can become a reality in our lifetime. Being unrealistic and unreasonable can in fact make the impossible inevitable, and it is the only way to build the ideal world.

At a time when Europe is growing together, cooperation between countries is becoming increasingly necessary. One of the main reasons for pursuing transnational spatial development is to attain a common understanding of the facts of spatial planning. Hence, the INTERREG III B project "COMMIN" sought to establish a common communication basis for the exchange of knowledge and experience in spatial planning and thus to foster and develop this understanding in the Baltic Sea region. Therefore, on the basis of a standardized structure the COMMIN project partners prepared basic information about institutional settings and spatial planning systems and compiled a glossary of key terminology in spatial planning accompanied by a varying range of fact sheets with respect to planning cases taken as examples. The readers will now find on www.commin.org the whole range of information covering the respective national languages as well as English translations, although in some countries official translations for these issues were lacking. The project partners were aware of the fact that each translation requires a balancing act between legal precision and communicable classification and, at the end, is a question of definition power and of different senses for semantics. The German text on hand (status December 2006) one information package out of eleven was prepared by a team comprising planners, lawyers, economists, and administrative academics. Actually no other publication treating this subject in English exists and it will hopefully contribute not only to understanding planning issues in Europe but also to transferring

in this respect information and knowledge within the country. Anyway, being aware of differences between countries is a point of departure for the mutual understanding process.

The book analyzes how modern portfolio theory and dynamic term structure models can be applied to government bond portfolio optimization problems. The author studies the necessary adjustments, examines the models with regard to the plausibility of their results and compares the outcomes to portfolio selection techniques used by practitioners. Both single-period and continuous-time bond portfolio optimization problems are considered.

An ABC of Music Springer

This important translation looks at World War I from the perspective of German working-class women. The author demonstrates the intimate connection between 'general' social history and women's history while analyzing the dynamics between these different levels of interpretation. She asks: - How did women view the war and whom did they hold responsible for it? - How did military leaders and politicians perceive women at work, in the home, and on the streets? This book explores the

ways in which the people themselves interpreted their world and their lives -- a perspective often neglected by historians but one

becoming increasingly relevant in Germany today. Essential reading for all those interested in War Studies, German Studies,

History and Women's Studies and an excellent text for course use.
