The most comprehensive guide available on hereditary cancers, from understanding risk, prevention, and genetic counseling and testing to treatment, quality of life, and more. Up to 10 percent of cancers are caused by inherited mutations in specific genes. Finding out that you or your loved ones may be at increased risk of developing cancer because of a genetic mutation raises a lot of questions: Is

cancer inevitable? Is there anything I should do differently in my life? Will my children also be at higher risk of cancer? Should I have preemptive treatments or surgery? This comprehensive guide provides answers to these questions and more. Written by three passionate patient advocates, this book is a compilation of the trusted information and support provided for more than two decades by Facing Our Risk of Cancer Empowered (FORCE), the de facto voice of the hereditary cancer community. Combining the latest scientific research with national guidelines, expert advice, and compelling

patient stories, the book offers previvors (those who have a mutation but have never been diagnosed), survivors, and their families the guidance they need to face the unique physical and emotional challenges of living in a high-risk body. An ideal resource for genetic counselors, physicians, nurses, advocates, and others who support and care for the hereditary cancer community, Living with Hereditary Cancer Risk also provides coverage of • signs of inherited cancer risk in a family; • the value of genetic counseling and testing; • mutations in BRCA, Lynch Syndrome, and other genes that elevate

cancer risk; • risk-reducing strategies; • traditional treatments and newer personalized approaches, including immunotherapies and PARP inhibitors; • nationally recommended guidelines for prevention, early detection, and treatment; • insurance coverage and discrimination protections; and • coping with sexual health, fertility, menopause, and other quality of life issues.

An evidence-based guide for doctors diagnosing, testing, and treating children with PANDAS (Pediatric Autoimmune Neuropsychiatric Disorder Associated with Strep infections). In the early 1990s, a group of researchers at the National Institute of Mental Health began collecting

data on children who had developed neuropsychiatric disorders (OCD and tics) following infections. They found evidence that antineuronal antibodies had developed in some of these children which attacked the basal ganglia region of the brain. MRI and PET scans in these children demonstrated inflammatory changes in the basal ganglia as well. In 1997, the researchers published the first article to describe this syndrome that they named PANDAS (Pediatric Autoimmune Neuropsychiatric Disorder Associated with Strep infections). In PANDAS, an autoimmune attack on the brain occurs following a Strep infection. PANS (Pediatric Acute-onset Neuropsychiatric Syndrome) is a broader term that also includes cases following exposure to other infections, toxins, and even stress. Clinicians treating children with PANS and PANDAS have found that antibiotics targeted at the offending organisms, steroids, and IVIG results in marked improvement and occasionally complete remission of the neuropsychiatric symptoms. Disturbing symptoms consistent with many DSM-5 psychiatric disorders manifest in patients with PANS and PANDAS—yet we know that

there is a biologic basis for the changes in these children. As a result, these disorders require us, as physicians, to view mental illness in an entirely new way. Resistance to this change in paradigm has made PANS and PANDAS difficult for clinicians to diagnose, unbearable for parents to endure, and controversial for scholars to accept. As such, there is no recognized standard of care. We have written this work in an effort to change that. This is a textbook by physicians for physicians. It was written to bring back some of the art of medicine to physicians caring for a group of children and families who really need it. PANS and PANDAS are complex disorders that demand a rich, multifaceted response with novel treatment approaches. The material in this book is assembled from the peer-reviewed medical literature, in combination with over thirty years of clinical experience caring for the sickest patients, both in and out of the hospital. Here you will find conclusive evidence for the existence and pathophysiology of PANS and PANDAS, alongside testing and treatment interventions the author has successfully used in his own practice with hundreds of

children. The book concludes with rich appendices including commonly used labs, doses of medications and supplements, a sample flare protocol, extensive support for parents, sample IVIG orders, and much more. We hope this resource allows you, the physician, to help these suffering families heal.

Once nearly as ubiquitous as dictionaries and cookbooks are today, letter-writing

manuals and their predecessors served to instruct individuals not only on the art of letter composition but also, in effect, on personal conduct. Poster and Mitchell contend that the study of letter-writing theory, which bridges rhetorical theory and grammatical studies, represents an emerging discipline in need of definition. In this volume, they gather the contributions of eleven experts to sketch the contours of epistolary theory and collect the historic and bibliographic materials - from Isocrates to email - that form the basis for its study.
