Routledge

In Pannonia and Upper  
Moesia, first published

1974, András Mócsy  
surveys the Middle  
Danube Provinces from  
the latest pre-Roman Iron  
Age up to the beginning  
of the Great Migrations.  
His primary concern is to  
develop a general  
synthesis of the

archaeological and  
historical researches in  
the Danube Basin, which  
lead to a more detailed  
knowledge of the Roman  
culture of the area. The  
economic and social  
development, town and  
country life, culture and

religion in the Provinces are all investigated, and the local background of the so-called Illyrian Predominance during the third century crisis of the Roman Empire is explained, as is the eventual breakdown of Danubian Romanisation. This volume will appeal to students and teachers of archaeology alike, as well as to those interested in the Roman Empire - not only the history of Rome itself, but also of the far-flung areas which together comprised the Empire's frontier for

centuries. *Fjalor enciklopedik shqiptar: N-Zh dhe një shtojcë* Penguin (Non-Classics) Eric Weitz presents a social and political history of German communism from its beginnings at the end of the nineteenth century to the collapse of the German Democratic Republic in 1990. In the first book in English or in German to explore this entire period, Weitz describes the emergence of the Communist Party of Germany (KPD) against the background of

Imperial and Weimar Germany, and clearly explains how the legacy of these periods shaped the character of the GDR to the very end of its existence. In Weimar Germany, social democrats and Germany's old elites tried frantically to discipline a disordered society. Their strategies drove communists out of the workplace and into the streets, where the party gathered supporters in confrontations with the police, fascist organizations, and even socialists and employed

workers. In the streets the party forged a politics of display and spectacle, which encouraged ideological pronouncements and harsh physical engagements rather than the mediation of practical political issues. Male physical prowess came to be venerated as the ultimate revolutionary quality. The KPD's gendered political culture then contributed to the intransigence that characterized the German Democratic Republic throughout its history. The

communist leaders of the GDR remained imprisoned in policies forged in the Weimar Republic and became tragically removed from the desires and interests of their own populace.

Mobile is impacting heavily on our society today. In this book, Nicoletti analyzes the application of mobile to the world of financial institutions. He considers future developments and the possible use of mobile to help the transformation

in products, processes, organizations and business models of financial institutions globally.

**The Ghost Rider** Edward Elgar Publishing

Policy design efforts are hampered by inadequate understanding of how policy tools and actions promote effective policies. The objective of this book is to address this gap in understanding by proposing a causal theory of the linkages between policy actions and policy effects. Adopting a mechanistic perspective,

the book identifies the causal processes that activate effects and help achieve goals. It thus offers a powerful analytical tool to both scholars and practitioners of public policy seeking to design effective policies.

**Probleme të planifikimit dhe të zhvillimit të ekonomisë së planifikuar në R. P.**

**Sh** Notion Press

Although women now represent over forty percent of the workforce in most countries, organizations have been slow to capitalize on the

potential of their women employees. This volume focuses on the business case for change, sources of resistance - including male backlash, denial, inaction and repression - and both organizational and legislative initiatives to support women.

Limitations of affirmative action programs and policies are identified. New approaches towards creating a more level playing-field in organizations are proposed. This volume should be of interest to women and men in

managerial and professional positions, women and men studying in professional fields such as business, law and government, organizations interested in managerial best practice and academic researchers whose work examines women in management issues.

**Gjurmave të letërsisë**

World Bank Publications  
In Central and Eastern European countries, inequalities for Roma families living in marginalized communities start early and are

striking. Some of these inequalities reflect hard-wired family circumstances such as being born in poverty. Others reflect lack of opportunities such as limited access to those basic goods and services that are necessary not only for realizing one's potential in life, but also for living with dignity. Gaps between Roma and non-Roma widen over the lifecycle in a way that reinforces and perpetuates disadvantage and translates into significantly unequal

outcomes, despite the fact that Roma report having similar aspirations to those of their non-Roma neighbors. Promoting equal opportunities for disadvantaged Roma is not only an imperative for societies that want to call themselves fair, but it is also a smart economic choice, especially in those countries where populations are aging rapidly. Investing early, with a particular emphasis on supporting healthy and cognitive development for disadvantaged Roma

children, is likely to go a long way in promoting fair chances. However, leveling the playing field in childhood is likely not enough: disadvantaged Roma continue being exposed to unequal opportunities at key nodes in their lives, such as when pursuing education or when looking for a job. Therefore, it is as important that a broader set of policies address some of the circumstances in which a large share of Roma children grow up, including access to

employment and decent living conditions for their families. Implementing interventions that help overcome these interrelated barriers will require strong ownership at the national level, coordinated policies across different ministries and government levels, and an integrated delivery system that is grounded in approaches that are customized to local conditions and implemented in a participatory manner. Good practices in Europe and elsewhere show that

inclusion of the most disadvantaged - including many Roma - is possible and the current programming cycle for European Funds represents a unique opportunity to fund such interventions.

**Structure and Synthesis of PID Controllers** Routledge

In many industrial applications, the existing constraints mandate the use of controllers of low and fixed order while typically, modern methods of optimal control produce high-

order controllers. The authors seek to start to bridge the resultant gap and present a novel methodology for the design of low-order controllers such as those of the P, PI and PID types. Written in a self-contained and tutorial fashion, this book first develops a fundamental result, generalizing a classical stability theorem - the Hermite-Biehler Theorem - and then applies it to designing controllers that are widely used in industry. It contains material on: • current

techniques for PID controller design; • stabilization of linear time-invariant plants using PID controllers; • optimal design with PID controllers; • robust and non-fragile PID controller design; • stabilization of first-order systems with time delay; • constant-gain stabilization with desired damping • constant-gain stabilization of discrete-time plants. Being Fair, Faring Better Routledge Mitigating climate change, clean environment, global peace, financial growth,

and future development of the world require new materials that improve the quality of life. Superconductivity, in general, allows perfect current transmission without losses. This makes it a valuable resource for sustainability in several aspects. High-temperature superconducting (HTSC) materials will be crucial for sustainable everyday applications and more attractive for the United Nations' SDGs. Superconducting magnets can be used as high-field

magnets in magnetic resonance imaging, nuclear magnetic resonance, water purification, magnetic drug delivery, etc. Hunger can be partly avoided if there is sustainability in agriculture. In the future, DC electric energy from solar plants in Africa could be transported worldwide, especially to cold countries, using superconducting cables. Superconducting technology is an efficient way to create sustainability as well as reduce greenhouse gases.

This book presents the latest global achievements in the processing and applications of high-Tc superconductors and discusses the usefulness of the SDGs. It summarizes the related advances in materials science and developments with respect to the SDGs. The book also covers large-scale applications of HTSC materials, which will be connected to the SDGs, addressed by several eminent scientists, including Prof. M.

Murakami, president, Shibaura Institute of Technology, Japan; Prof. D. Cardwell, pro-vice chancellor, University of Cambridge, UK; and Prof. N. Long, director, Victoria University of Wellington, New Zealand.  
*The Economics of the Common Market*  
 Canongate Books  
 There are many literatures on banking, banking laws, internal audit system and their applications in the banking sector, with each book focusing on a specific area. A Guide to

Risk-Based Internal Audit System in Banks covers everything about banks, their operations, business, compliances and areas to be covered in risk-based audits and audit processes, in the form of guidance. This book will help company managements to implement the internal audit system in banks and at the same time, it explains the role and responsibilities of internal auditors whether in-house or outsourced. Why this book? v Written in simple and clear language using

appropriate flowcharts and diagrams v Focuses on practical aspects of internal audit system in banks v Explains the evolution of the banking sector from traditional to modern v Explains laws governing the banking sector in India v Provides practical guidance on auditing each areas of banking operations and the assets and liabilities based on risk v Serves as a guide to auditors, students, academicians and bankers to understand and apply the risk-based internal audit

concept in banks  
*Islamic Financial Markets (Rle Banking and Finance)*  
John Wiley & Sons  
Economic literature pays a great deal of attention to the performance of banks, expressed in terms of competition, concentration, efficiency, productivity and profitability. This book provides an all-embracing framework for the various existing theories in this area and illustrates these theories with practical applications. Evaluating a broad field of research, the book describes a

profit maximizing bank and demonstrates how several widely-used models can be fitted into this framework. The authors also present an overview of the current major trends in banking and relate them to the assumptions of each model, thereby shedding light on the relevance, timeliness and shelf life of the various models. The results include a set of recommendations for a future research agenda. Offering a comprehensive analysis of bank performance, this book is

useful for all of those undertaking research, or are interested, in areas such as banking, competition, supervision, monetary policy and financial stability.

*Për ku?* New York : McGraw-Hill

An old woman is awoken in the dead of night by knocks at her front door. The woman opens it to find her daughter, Doruntine, standing there alone in the darkness. She has been brought home from a distant land by a mysterious rider she claims is her brother

Konstandin. But unbeknownst to her, Konstandin has been dead for years. What follows is chain of events which plunges a medieval village into fear and mistrust. Who is the ghost rider?

*Rruga e partisë* Springer  
Contains chapter overview and outline, learning objectives, key concept review, helpful hints, multiple choice questions and problem solving questions  
*Klan* Springer Science & Business Media  
The first comparative

survey of the experiences of Islamic banking across the Muslim world, covering Turkey, Egypt, Kuwait, Jordan, Sudan, Iran, Pakistan and Saudi Arabia.

**Islamic Banking** World Bank Publications

"The relationships among competition in the financial sector, access of firms to external financing, and associated economic growth are ambiguous in theory. Moreover, measuring competition in the financial sector can be complex. In this paper

Claessens and Laeven first estimate for 16 countries a measure of banking system competition based on industrial organization theory. They then relate this competition measure to growth of industries and find that greater competition in countries' banking systems allows financially dependent industries to grow faster. These results are robust under a variety of tests. The results suggest that the degree of competition is an important aspect of financial sector funding.

This paper--a product of the Financial Sector Operations and Policy Department--is part of a larger effort in the department to study competition in banking"--World Bank web site. *Fletorja zyrtare e Republikës së Shqipërisë* Bookboon Part of the authoritative four-volume reference that spans the entire field of child development and has set the standard against which all other scholarly references are compared. Updated and revised to reflect the new

developments in the field, the Handbook of Child Psychology, Sixth Edition contains new chapters on such topics as spirituality, social understanding, and non-verbal communication. Volume 4: Child Psychology in Practice, edited by K. Ann Renninger, Swarthmore College, and Irving E. Sigel, Educational Testing Service, covers child psychology in clinical and educational practice. New topics addressed include educational assessment and evaluation, character education, learning

disabilities, mental retardation, media and popular culture, children's health and parenting. *The Generalisation of the General Theory and other Essays* Springer Science & Business Media

Although "too big to fail" (TBTF) has been a perennial policy issue, it was highlighted by the near-collapse of several large financial firms in 2008. Financial firms are said to be TBTF when policy makers judge that their failure would cause unacceptable disruptions to the overall financial

system, and they can be TBTF because of their size or interconnectedness. In addition to fairness issues, economic theory suggests that expectations that a firm will not be allowed to fail create moral hazard-if the creditors and counterparties of a TBTF firm believe that the government will protect them from losses, they have less incentive to monitor the firm's riskiness because they are shielded from the negative consequences of those risks. If so, they

could have a funding advantage compared with other banks, which some call an implicit subsidy. S.Con.Res. 8, passed by the Senate on March 22, 2013, and H.Con.Res. 25, as amended and passed by the Senate on October 16, 2013, create a non-binding budget reserve fund that allows for future legislation to address the TBTF funding advantage.

**Elimination of Riba from the Economy**  
Springer

This paper brings to the forefront the assumptions that we make when

focussing on a particular type of explanation for bank profitability. We evaluate a broad field of research by introducing a general framework for a profit maximizing bank and demonstrate how different types of models can be fitted into this framework. Next, we present an overview of the current major trends in European banking and relate them to each model's assumptions, thereby shedding light on the relevance, timeliness

and shelf life of the different models. This way, we arrive at a set of recommendations for a future research agenda. We advocate a more prominent role for output prices, and suggest a modification of the intermediation approach. We also suggest ways to more clearly distinguish between market power and efficiency, and explain why we need time-dependent models. Finally, we propose the

application of existing models to different size classes and sub-markets. Throughout we emphasize the benefits from applying several, complementary models to overcome the identification problems that we observe in individual models.
