A handy guide to tackling difficult patient and professional interactions with confidence and compassion In this age of increasing reliance on technology, it is essential that the fundamentals of compassion and good communication—the art of patient care—remain at the heart of health care. This clear, concise guide to professional communication strategies helps nurses and other health care clinicians to build effective patient relationships and navigate a wide variety of difficult patient and professional interactions. Written by a practicing psychotherapist who has devoted nearly 30 years of study to clinician—patient

relationships, the book tackles such complex issues as dealing with demanding patients, maintaining professional boundaries, overcoming biases and stereotypes, managing clinician emotions, communicating bad news, challenging a colleague's clinical opinion, and other common scenarios. The book guides the reader through a conceptual framework for building effective relationships that is based on the principles of mindfulness. These principles are embedded in discussions of the fundamental elements of interpersonal effectiveness, such as hope, empathy, and listening. Chapters apply mindfulness principles to specific challenging situations with concrete examples that describe

We all feel uncomfortable about the role of profit in healthcare, we all have a vague notion that the global \$600bn pharmaceutical industry is somehow evil and untrustworthy, but that sense rarely goes beyond a flaky, undifferentiated new age worldview. *Bad Pharma* puts real flesh on those bones, revealing the rigged evidence used by drug companies. Bad information means bad treatment decisions, which means patients suffer and die: there is no climactic moment of villainy, but drugs are used which are overpriced, less effective, and have more side effects. There are five cheap, easy things we can do to fix the problem. *Bad Pharma* takes a big dirty secret out into the open, and will provide a single focus for concerns people have both inside and outside medicine.
