Unnatural Creatures Ballantine Books

'Heart-wrenchingly honest' Professor Sue Black, author of All That Remains _____ Meet the forensic pathologist, Dr Richard Shepherd. He solves the mysteries of unexplained or sudden death. He's a detective in his own right. And he has one, ultimate and pressing question to answer: How did this person die? Unnatural Causes is an unputdownable record of an extraordinary life, a unique insight into a remarkable profession, and above all a powerful and reassuring testament to lives cut short. _____ Dr Shepherd has faced serial killers, natural disaster, 'perfect murders' and freak accidents, all in the pursuit of the truth. And while he's been involved in some of the most high-profile cases of recent times, it's often the less well-known encounters that prove the most perplexing, intriguing and even bizarre. In or out of the public eye, his evidence has put killers behind bars, freed the innocent and turned open-and-shut cases on their heads. But a life in death, bearing witness to some of humanity's darkest corners, exacts a price and Shepherd doesn't flinch from counting the cost to him and his family. The dead do not hide the truth and they never lie. Through me the dead can speak . . .

That One Patient: Doctors and Nurses' Stories of the Patients Who Changed Their Lives Forever Penguin

Crime novelist and former police officer Nigel McCreery provides an account of all the major areas of forensic science from around the world over the past two centuries. The book weaves dramatic narrative and scientific principles together in a way that allows readers to figure out crimes along with the experts. Readers are introduced to such fascinating figures as Dr. Edmond Locard, the "French Sherlock Holmes"; Edward Heinrich, "Wizard of Berkeley," who is credited with having solved more than 2,000 crimes; and Alphonse Bertillon, the French scientist whose guiding principle, "no two individuals share the same characteristics," became the core of criminal identification. Landmark crime investigations examined in depth include a notorious murder involving blood evidence and defended by F. Lee Bailey, the seminal 1936 murder that demonstrated the usefulness of the microscope in examining trace evidence, the 1849 murder of a wealthy Boston businessman that demonstrated how difficult it is to successfully dispose of a corpse, and many others.

Beyond the Tape Crooked Lane Books

Can the dead tell their stories? In the hands of a good forensic surgeon, they certainly can. First published in 2010 in Malayalam as Oru Police Surgeonte Ormakkurippukal, this is the bestselling memoir of Kerala's most famous forensic surgeon, Dr B. Umadathan. Popularly known as the 'Sherlock Holmes of Kerala', Dr Umadathan revisits some of his strangest and most interesting cases, like the Chacko murder masterminded by Sukumara Kurup; the sensational Polakkulam case; and the baffling Panoor Soman case. Chilling, shocking and, at times, downright bizarre, Dead Men Tell Tales is unputdownable.

In 1997, Dr Marie Cassidy arrived in Dublin from Glasgow. There to discuss a possible deputy state pathologist post with Professor John Harbison, instead she was whisked by police escort to a Grangegorman murder scene. There was no turning back. She became Ireland's State Pathologist from 2004 until 2018, her image synonymous with breaking news of high-profile cases - a trusted figure in turbulent times. Here, with the scalpel-like precision and calm authority of her trade, Marie shares her remarkable personal journey from working-class Scotland into the world of forensic pathology, describing in candid detail the intricate processes central to solving modern crime. She recounts her work following the tragic deaths of Rachel O'Reilly, Siobhan Kearney, Robert Holohan, Tom O'Gorman and others - along with the Stardust exhumations and lesser known cases from her long career - outlining the subtle methods by which pathology and the justice system meet. Beyond the Tape is a unique behind-the-scenes journey into the mysteries of unexplained and sudden death - by turns poignant, stark and deeply compelling.

NEW YORK TIMES BESTSELLER • A former star athlete turned deputy coroner is drawn into a brutal, complicated murder in this psychological thriller from a father-son writing team that delivers “brilliant, page-turning fiction” (Stephen King). Natural causes or foul play? That’s the question Clay Edison must answer each time he examines a body. Figuring out motives and chasing down suspects aren’t part of his beat—not until a seemingly open-and-shut case proves to be more than meets his highly trained eye. Eccentric, reclusive Walter Rennert lies cold at the bottom of his stairs. At first glance the scene looks straightforward: a once-respected psychology professor, done in by booze and a bad heart. But his daughter Tatiana insists that her father has been murdered, and she persuades Clay to take a closer look at the grim facts of Rennert’s life. What emerges is a history of scandal and violence, and an experiment gone horribly wrong that ended in the brutal murder of a coed. Walter Rennert, it appears, was a broken man—and maybe a marked one. And when Clay learns that a colleague of Rennert’s died in a nearly identical manner, he begins to question everything in the official record. All the while, his relationship with Tatiana is evolving into something forbidden. The closer they grow, the more determined he becomes to catch her father’s killer—even if he has to overstep his bounds to do it. The twisting trail Clay follows will lead him into the darkest corners of the human soul. It’s his job to listen to the tales the dead tell. But this time, he’s part of a story that makes his blood run cold. Praise for Crime Scene “You could drive yourself crazy trying to figure out who wrote what. . . . But whoever came up with the fine line, 'When I meet

new people, they’re usually dead,’ should pat himself on the back.”—The New York Times Book Review “A terrific book . . . Put Crime Scene at the top of your reading pile.”—Bookreporter “A character-driven, intricately plotted whodunit . . . Mystery readers will devour the book and look forward to the next father and son collaboration.”—Press Republican

The heart-wrenchingly honest and fascinating new book from forensic pathologist and bestselling author of UNNATURAL CAUSES, Dr Richard Shepherd A TIMES AND SUNDAY TIMES BOOK OF THE YEAR 'Each chapter is like a finely-crafted detective story . . . Shepherd writes beautifully, and despite its subject, the book is very funny in parts' DAILY TELEGRAPH 'Enlightening, strangely uplifting . . . Shepherd's final chapter on death itself is a meditation of great beauty and light which puts all the darkness of the previous pages into perspective' DAILY MAIL 'Deeply insightful. Unflinching' THE TIMES 'Fascinating' DAILY EXPRESS 'This book is about death, but in it I will take readers on a journey through life . . .' _____ Dr Richard Shepherd, Britain's top forensic pathologist, has spent a lifetime close to the dead. As a medical detective, each autopsy he carries out is its own unique investigation, uncovering the secrets not only of how a person died, but also of how they lived. Through twenty-four of his most intriguing, enlightening and never-before-told cases, Dr Shepherd shares autopsies that span the seven ages of human existence, and have taught him as much about the marvels of life as the inevitability of death. From old to young, from murder to misadventure, and from illness to accidental death, each of these bodies has something to reveal: about human development, about mortality, about its owner's life story, about justice and even about Shepherd himself. From the bestselling author of Unnatural Causes comes a powerful, moving and above all reassuring book about death as it touches our own lives - how to understand it, and, when our time comes (as it must), how to embrace it as the last great adventure. _____ 'He has the ability to examine himself and other people with the same forensic eye that he applies to corpses - one of the reasons why his books feel so life-enhancing' Daily Telegraph Praise for Dr Richard Shepherd 'Gripping, grimly fascinating, and I suspect I'll read it at least twice' Evening Standard 'A deeply mesmerising memoir of forensic pathology. Human and fascinating' Nigella Lawson 'An absolutely brilliant book. I really recommend it, I don't often say that but it's fascinating' Jeremy Vine, BBC Radio 2 'Puts the reader at his elbow as he wields the scalpel' Guardian 'Fascinating, gruesome yet engrossing' Richard and Judy, Daily Express 'Fascinating, insightful, candid, compassionate' Observer

"Sue Black confronts death every day. As Professor of Anatomy and Forensic Anthropology, she focuses on mortal remains in her lab, at burial sites, at scenes of violence, murder and criminal dismemberment, and when investigating mass fatalities due to war, accident or natural disaster. In All That Remains she reveals the many faces of death she has come to know, using key cases to explore how forensic science has developed, and what her work has taught her. Do we expect a book about death to be sad? Macabre? Sue's book is neither. There is tragedy, but there is also humour in stories as gripping as the best crime novel. Our own death will remain a great unknown. But as an expert witness from the final frontier, Sue Black is the wisest, most reassuring, most compelling of guides."--Amazon.com.

The Crowd A&C Black

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

No one gets inside the head of the murderer—or makes it a more thrilling read—than the late, great P. D. James. Fast on the heels of her latest best seller: a new, fiendishly entertaining gathering of previously uncollected stories, from the author of *Death Comes to Pemberley* and *The Private Patient*. It's not always a question of "whodunit?" Sometimes there's more mystery in the why or how. And although we usually know the unhealthy fates of both victim and perpetrator, what of those clever few who plan and carry out the perfect crime? The ones who aren't brought down even though they're found out? And what about those who do the finding out who witness a murder or who identify the murderer but keep the information to themselves? These are some of the mysteries that we follow through those six stories as we are drawn into the thinking, the memories, the emotional machinations, the rationalizations, the dreams and desires behind murderous cause and effect.

[How to Solve a Murder: True Stories from a Life in Forensic Medicine](#) Chicago Review Press

* JFK's autopsy failed to disclose crucial evidence. * The deaths of John Belushi and Elvis Presley were far more complex than anyone has let on. * Decisive medical findings in the von Bulow affair were consistently overlooked. These are but three of the shocking revelations in Dr. Michael Baden's first-person, no-holds-barred account of his distinguished career in forensic pathology. In determining the causes of tens of thousands of deaths, from those of presidents and rock stars to victims of serial killings, exotic sex rituals, mass disasters, child abuse and drug abuse, Baden has come to the unavoidable conclusion that the search for scientific truth is often sullied by the pressures of expediency. He produces dramatic evidence to demonstrate that political intrigue, influence peddling, and professional incompetence have created a national crisis in forensic medicine. "A fascinating look into the mechanics of forensics and a disconcerting lesson in the politics of death." -- The New York Times Book Review

National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century."—Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. "Don't be put off by the academic title of Julian Jaynes's *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor."—The New York Times "When Julian Jaynes . . .

speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis."—John Updike, *The New Yorker* "He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior."—*American Journal of Psychiatry*

'An intricate and brilliantly written psychiatric perspective on the most perplexing of crimes' Kerry Daynes, author of *The Dark Side of the Mind* 'Beautifully written and very dark' Nimco Ali OBE 'Whodunnit' doesn't matter so much, not to a forensic psychiatrist. We're more interested in the 'why'. In his twenty-six years in the field, Richard Taylor has worked on well over a hundred murder cases, with victims and perpetrators from all walks of life. In this fascinating memoir, Taylor draws on some of the most tragic, horrific and illuminating of these cases - as well as dark secrets from his own family's past - to explore some of the questions he grapples with every day: Why do people kill? Does committing a monstrous act make someone a monster? Could any of us, in the wrong circumstances, become a killer? As Taylor helps us understand what lies inside the minds of those charged with murder - both prisoners he has assessed and patients he has treated - he presents us with the most important challenge of all: how can we even begin to comprehend the darkest of human deeds, and why it is so vital that we try? *The Mind of a Murderer* is a fascinating exploration into the psyche of killers, as well as a unique insight into the life and mind of the doctor who treats them. For fans of *Unnatural Causes*, *The Examined Life* and *All That Remains*. MORE PRAISE FOR THE MIND OF A MURDERER: 'A fascinating insight into what drives criminality - and a punchy polemic against mental-health service cuts' Jake Kerridge, *Sunday Telegraph* 'A fascinating, well-written and compelling account of the mental state in homicide' Alisdair Williamson, *TLS* 'A dark, fascinating and often surprising glimpse into the minds of those who kill, from a forensic psychiatrist who's seen it all' Rob Williams, writer of BBC's *The Victim* 'An excellent, engaging and honest book, full of interesting, powerful and important observations' Alison Liebling, Professor of Criminology and Criminal Justice, University of Cambridge

Book of the Year, Saltire Literary Awards A CrimeReads Best True Crime Book of the Month For fans of Caitlin Doughty, Mary Roach, Kathy Reichs, and CSI shows, a renowned forensic scientist on death and mortality. Dame Sue Black is an internationally renowned forensic anthropologist and human anatomist. She has lived her life eye to eye with the Grim Reaper, and she writes vividly about it in this book, which is part primer on the basics of identifying human remains, part frank memoir of a woman whose first paying job as a schoolgirl was to apprentice in a butcher shop, and part no-nonsense but deeply humane introduction to the reality of death in our lives. It is a treat for CSI junkies, murder mystery and thriller readers, and anyone seeking a clear-eyed guide to a subject that touches us all. Cutting through hype, romanticism, and cliché, she recounts her first dissection; her own first acquaintance with a loved one's death; the mortal remains in her lab and at burial sites as well as scenes of violence, murder, and criminal dismemberment; and about investigating mass fatalities due to war, accident, or natural disaster, such as the 2004 Indian Ocean tsunami. She uses key cases to reveal how forensic science has developed and what her work has taught her about human nature. Acclaimed by bestselling crime writers and fellow scientists alike, *All That Remains* is neither sad nor macabre. While Professor Black tells of tragedy, she also infuses her stories with a wicked sense of humor and much common sense.

AS SEEN ON THIS MORNING 'a fascinating and moving account of life working with people who too often society wants to forget' Dr Amanda Brown, author of *THE PRISON DOCTOR* 'excellent and enlightening' Jonathan Levi and Emma French, authors of *INSIDE BROADMOOR* 'thought provoking' Gwen Adshead, author of *THE DEVIL YOU KNOW* Shocking, eye-opening and grimly fascinating, these are the true stories, patients and cases that have characterised a career spent treating mentally disordered offenders. As a forensic psychiatrist, it's Dr Das's job to treat and rehabilitate what the tabloids might call the 'criminally insane', many of whom assault, rob, rape, and even kill. His work takes him to high-security prisons and securely locked hospital wards across the country, as well as inside courtrooms, giving evidence as an expert witness. From the young woman who smothered her two-year-old nephew in a flash of psychosis, to the teenager who set his house on fire with his mother locked inside, Dr Das must delve into the minds of these violent offenders to elicit their symptoms of mental illness, understand their actions and prevent future atrocities. In this honest, revealing and at times humorous memoir, Dr Das shares stories from his fifteen years as a psychiatric doctor working with this dangerous clientele, detailing some of his most extreme, heart-breaking and bizarre cases - and how he's learned to live with his mistakes when the worse happens. Compelling, enlightening and candid, if you enjoyed *Unnatural Causes*, *Dark Side of the Mind* or *The Prison Doctor*, you'll love *IN TWO MINDS*.
