Technology offsets, a nonconventional international trade-financing tool, is used by governments (buyers) to obtain industrial and technological benefits from companies (sellers) as part of international procurement. Offsets deals involve billions of dollars and this practice exists in around 80 countries around the world. Though offsets is a popular practice in defence, it is increasingly gaining popularity in civil sectors. Offsets is often tainted by controversy and receives bad press. What then makes offsets popular? Governments claim that offsets delivers technology and knowledge transfer, skills in high technology sectors and employment, and offsets expands export opportunities through participation in OEM supply chains. For companies, offsets is mainly employed as a tool to obtain a competitive edge and win sales in international business. In the past, there have been mixed results of case studies on the impact of offsets successes and failures. Considering the mismanagement of globalisation, unfair trade agreements and current political and economic discontent, there is a stronger need for governments and companies to use vehicles such as offsets to create a relationship of trust and commitment for sustainable development. This book fills the gap in offsets and focuses on how to manage offsets more effectively by addressing issues of strategy, policy and implementation, technology management, governance and risk. Technology Offsets in International Defence Procurement is designed for those studying international procurement, international trade, international business, technology management, defence policy and industrial policy. This book will also be of interest to practitioners and policy makers in both government and industry.

Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

Innovation in information and production technologies is creating benefits and disruption, profoundly altering how firms and markets perform. Digital DNA provides an in depth examination of the opportunities and challenges in the fast-changing global economy and lays out strategies that countries and the international community should embrace to promote robust growth while addressing the risks of this digital upheaval. Wisely guiding the transformation in innovation is a major challenge for global prosperity that affects everyone. Peter Cowhey and Jonathan Aronson demonstrate how the digital revolution is transforming the business models of high tech industries but also of traditional agricultural, manufacturing, and service sector firms. The rapidity of change combines with the uncertainty of winners and losers to create political and economic tensions over how to adapt public policies to new technological and market surprises. The logic of the policy trade-offs confronting society, and the political economy of practical decision-making is explored through three developments: The rise of Cloud Computing and trans-border data flows; international collaboration to reduce cybersecurity risks; and the consequences of different national standards of digital privacy protection. The most appropriate global strategies will recognize that a significant diversity in individual national policies is inevitable. However, because digital technologies operate across national boundaries there is also a need for a common international baseline of policy fundamentals to facilitate "quasi-convergence" of these national policies. Cowhey and Aronson's examination of these dynamic developments lead to a measured proposal for authoritative "soft rules" that requires governments to create policies that achieve certain objectives, but leaves the specific design to national discretion. These rules should embrace mechanisms to work with expert multi-stakeholder organizations to facilitate the implementation of formal agreements, enhance their political legitimacy and technical expertise, and build flexible learning into the governance regime. The result will be greater convergence of national policies and the space for the new innovation system to flourish.

Business as usual' isn't working. There is an emerging consensus that all is not well with today's market-centric economic model. Although it has delivered wealth over the last half-century and pulled millions out of poverty, it is recession-prone, leaves too many people unemployed, creates ecological scarcities and environmental risks, and widens the gap between the rich and the poor. In

Corporation 2020, Pavan Sukhdev lays out a sweeping new vision for tomorrow's corporation: one that will increase human well being and social equity, decrease environmental risks and ecological losses, and still generate profit. Sukhdev illustrates his vision with examples ranging from Infosys's creation of human capital to Citibank's having to change its project finance policy due to rainforest destruction. From its insightful look into the history of the corporation to the thoughtful discussion of the steps needed to craft a better corporate model, Corporation 2020 offers a hopeful vision for the role of business in shaping a more equitable, sustainable future.
