Getting the right
diagnosis is a key
aspect of health care -
it provides an
explanation of a
patient's health
problem and informs
subsequent health care

decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in

psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care*, a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care

and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

In the United States, some populations suffer from far greater

disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies,

and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. *Strengthening Forensic Science in the United States* Rowman &

This book offers the first systematic, comparative analysis of military education and training in Europe within the context of the post-Cold War security environment. Based on an analysis of military education institutions in the UK, Germany, Finland, Romania and the Baltic States, this book demonstrates that the convergence of European military cultures since the end of the Cold War is linked to changes in military education. The process of convergence originates, at least in part, from the full or partial adoption of a new concept by post-commissioning professional military education institutions: the National Defence

University. Officers are now educated alongside civilians and public servants, wherein they enjoy a socialization experience that is markedly different from that of previous generations of European officers, and is increasingly similar across national borders. In addition, this book argues that with the control over the curricula and graduation criteria increasingly set by civilian higher education authorities, the European armed forces, while continuing to exist, and hold significant (although declining) capabilities, stand to lose their status as a profession in the traditional sense. This book will be of much interest to students of

military, European security policy, European politics, and IR in general.

Details the safety, mental health, and wellness issues in schools today and focuses on the interactions and collaborations needed among students, teachers, families, community members, and other professionals to foster the safety, learning, and well-being of all students. Safe schools and student well-being take a "village" of adults and students with varied interests, perspectives, and abilities collaborating to create caring, supportive, and academically productive schools. Schools are unofficial

mental health care providers for children and youth who are placed at risk by social and economic circumstances and whose un- and under-addressed needs can compromise teaching and learning. This handbook provides up-to-date information on how to promote safety, wellness, and mental health in a manner that can help draw the needed "village" together. It aligns research and practice to support effective collaboration—it provides information and tools for educators, administrators, policy makers, mental health and community organizations, families, parents, and students to join forces to promote and support school safety, student

well-being, and student mental health. Chapters address school context, the dynamic nature of school communities and child development, and the importance of diversity and equity. Chapters provide in-depth understanding of why and how to improve safety, well-being, and mental health in a culturally responsive manner. They provide strategies and tools for planning, monitoring, and implementing change, methods for collaborating, and policy and practice guidance. They provide examples of successful and promising cross-system and cross-stakeholder collaborations. This handbook will interest students, scholars, faculty, and

researchers in education, counseling, and psychology; administrators in human services and youth development; policy makers; and student, family, and community representatives.

"Radiation Safety Procedures and Training for the Radiation Safety

Officer" is designed to provide radiation safety officers and users/operators of devices using radiation with the tools needed to operate a safe program, construct training materials and courses, AND to comply with regulatory requirements. It is centered primarily around radioactive materials license requirements, but much of the material can be applied to non-healing arts x-ray, accelerator, and laser operations and registrations. All of the information consists of either original text created by the author or compilations of regulatory information/requirements and of common knowledge scientific information found in standard tables and

references. A minimal amount of radiation principles are offered to provide the reader/user with enough information to proceed through the material and operate a safe radiation program.

 A provocative history that reveals how guns—not abortion, race, or religion—are at the heart of America's cultural divide. *Gunfight* is a timely work examining America's four-centuries-long political

battle over gun control and the right to bear arms. In this definitive and provocative history, Adam Winkler reveals how guns—not abortion, race, or religion—are at the heart of America's cultural divide. Using the landmark 2008 case *District of Columbia v. Heller*—which invalidated a law banning handguns in the nation's capital—as a springboard, Winkler brilliantly weaves together the dramatic stories of gun-rights advocates and gun-control lobbyists, providing often unexpected insights into the venomous debate that now cleaves our nation. *Master the Officer Candidate Tests* Rowman & Littlefield

While freedom of speech is a defining characteristic of the United States, the First Amendment right is often regulated within certain environments. For years, schools have attempted to monitor and regulate student communication both within the educational environment and in student use of social media and other online communication tools. Censorship and Student

Communication in Online and Offline Settings is a comprehensive reference source that addresses the issues surrounding student's right to free speech in on and off-campus settings. Featuring relevant coverage on the implications of digital media as well as constitutional and legal considerations, this publication is an essential resource for school administrators, educators, students, and policymakers interested in uncovering the reasons behind student censorship and the challenges associated with the regulation of students' free speech. When faced with danger you must DO something. The teacher at the Ant Hill School wants her students to be prepared - for everything! One day, she teaches her students what to do if a "dangerous someone" is in their school. "I'll be your shepherd, and you're all my sheep, so you must do what I say. Pretend there's a wolf in our building,

and we MUST stay out of his way!" "We need a great plan of action in case we start to get scared. The ALICE Plan will work the best, to help us be prepared." Unfortunately, in the world we now live in, we must ask the essential question: What are the options for survival if we find ourselves in a violent intruder event? *I'm Not Scared...I'm Prepared!* will enhance the ALICE concepts and make them applicable to children of all ages in a non-fearful way. By using this book, children can develop a better understanding of what needs to be done if they ever encounter a "dangerous someone." *The 2013 National School Climate Survey*

This report presents

findings on crime and violence in U.S. public schools, using data from the 2007-08 School Survey on Crime and Safety (SSOCS:2008). SSOCS provides information about school crime-related topics from the perspective of schools by asking school principals about the frequency of incidents, such as physical attacks, robberies, and thefts, in their schools. Tables in the report contain totals and percentages generated from bivariate cross-tabulation procedures. Many of the variables examined are related to one another, and complex interactions and relationships have not been explored. Reported findings include: (1) During the 2007-08 school year, the rate of violent

incidents per 1,000 students was higher in middle schools than in primary schools or high schools; (2) Nine percent of schools reported at least one incident of threat with a weapon; (3) Rate of the distribution, possession, or use of illegal drugs was higher in schools with 1,000 or more students than in schools with lower enrollments; (4) About 13 percent of city schools reported at least one gang crime; (5) About 18 percent of city schools reported that student acts of disrespect for teachers (other than verbal abuse) happen daily or at least once a week; (6) For students involved in the use or possession of a weapon other than a firearm or explosive device at school, the

most frequently used disciplinary action was an out-of-school suspension; (7) A lower percentage of schools with 1,000 or more students reported that more than 75 percent of students had a parent or guardian who attended regularly scheduled parent-teacher conferences than did schools with lower enrollments; (8) A higher percentage of schools with minority enrollments of 50 percent or more involved students in resolving student conduct problems as a component of violence prevention programs than did schools with lower minority enrollments; (9) Compared to schools in towns or rural areas, larger percentages of city and suburban schools reported

having a written plan for procedures to be followed if the Department of Homeland Security issues a warning for a severe risk of terrorist attack; (10) A higher percentage of middle schools reported drilling students on a written plan describing the procedures to be performed during a shooting than high schools or primary schools; and (11) Among factors that were reported to limit schools' efforts to reduce or prevent crime, lack of or inadequate alternative placements or programs for disruptive students, inadequate funds, and federal/state/district policies on disciplining special education students are most frequently reported.

Four appendixes are included: (1) Standard Error Tables; (2) Methodology and Technical Notes; (3) Description of Variables; and (4) 2007-08 School Survey on Crime and Safety Questionnaire. (Contains 18 footnotes and 23 tables.) [For "Crime, Violence, Discipline, and Safety in U.S. Public Schools. Findings from the School Survey on Crime and Safety: 2005-06. NCES 2007-361," see ED498378.]. *Sports-Related Concussions in Youth* National Center for Youth Issues

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related

concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth:*

Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide

useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to

duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a

direction for research to reach this goal.

The Police Manager provides a roadmap for the challenges that

police administrators face in their day-to-day duties, including considerations for dealing with subordinate officers and for interacting with the public. Covering a wide range of topics, from fiscal management to use-of-force policies, this text prepares readers for the tasks that police managers are confronted with. Readers benefit by gaining a thorough understanding of the complexities involved in an occupation that creates demands from the public, from public officials, and from other police officers. The book delivers information on these issues, with chapters dedicated to leadership styles and planning for leadership loss, as well as civil liability

considerations. New material in this edition covers specific challenges for small and underexamined police agencies such as university police departments. The *Police Manager* is an ideal textbook for college students hoping to work in police administration in the future, and is useful for current police managers who know that their jobs require a constant influx of ideas for overcoming new challenges.
