Implementing Strategic Sourcing Edward Elgar Publishing

All companies which reach a critical size are faced with outsourcing decisions that can increase the value of their products and services primarily through lower costs, greater reliability and improved efficiency. Successful outsourcing decisions have an important knowledge dimension, where the outsourcing professionals need to be supported by historical and contextual knowledge regarding their own products performance but also the performance of suppliers. Outsourcing in Manufacturing: the Knowledge Dimension explains in detail how a manager can acquire, create, transfer and use knowledge that optimizes their outsourcing decisions and improves the changes of marketplace success. Outsourcing in Manufacturing: the Knowledge Dimension gives examples of the key decisions that needs to be taken by managers regarding effective outsourcing.

Decisions are divided around the structural and infrastructural aspects of outsourcing and the key knowledge that needs to be managed to support good decisions. The book contains illustrations and examples of key processes throughout and concludes with a section dedicated to case studies. These case studies represent a variety of manufacturing system types and sizes focused on supply chain integration, and which deploy various manufacturing paradigms including craft, mass, lean, adaptive, and sustainable manufacturing. Outsourcing in Manufacturing: the Knowledge Dimension covers many theoretical and practical examples of critical outsourcing decisions, their knowledge aspects and how knowledge challenges can be dealt with in a systematic way. It provides a key resource for students, lecturers and industry managers looking to solidify their understanding and application of outsourcing decision making strategies. .

Parole, Desistance from Crime, and Community Integration McGraw Hill

This primer enables professionals with technical expertise to collaborate with their business-side colleagues. Emphasizing brevity and clarity, it gives technical staff answers to their most pressing questions about economics, finance, marketing, strategic decision-making, accounting, management, and related subjects. It does not offer condensed 1st year MBA courses; instead, it presents streamlined concepts and insights that are easy enough to be accessible and challenging enough to hold one's interest. Its examples from pharma, IT, aircraft/navigation, and other industries highlight problems that technical professionals face daily. Written by "one of them," its credibility makes it more useful than Internet resources. Because it concentrates on pragmatic (as opposed to academic) approaches to business, it empowers technical staff to stay with the conversation--and take it to a higher level. Bertrand C. Liang, MD, PhD, MBA, is Managing Director of LCC Ventures and Executive Director of Pfenex, Inc. He is trained in molecular biology and genetics (PhD) and is a clinician (MD) with subspecialty training in neurology and oncology, and serves as a Visiting University Professor at Liaoning He University, Shenyang, China. Creates frameworks and builds concepts enabling technical staff to work with their business colleagues Delivers content for pragmatic, immediate use, not condensed presentations of subjects from first year MBA curriculum Extends readers' grasp by posting additional resources at a freely-available website

Handbook Of Research In Mass Customization And Personalization (In 2 Volumes) - Volume 1: Strategies And Concepts; Volume 2: Applications And Cases Edward Elgar Publishing

Every day, about 1,600 people are released from prisons in the United States. Of these 600,000 new releasees every year, about 480,000 are subject to parole or some other kind of postrelease supervision. Prison releasees represent a challenge, both to themselves and to the communities to

which they return. Will the releasees see parole as an opportunity to be reintegrated into society, with jobs and homes and supportive families and friends? Or will they commit new crimes or violate the terms of their parole contracts? If so, will they be returned to prison or placed under more stringent community supervision? Will the communities to which they return see them as people to be reintegrated or people to be avoided? And, the institution of parole itself is challenged with three different functions: to facilitate reintegration for parolees who are ready for rehabilitation; to deter crime; and to apprehend those parolees who commit new crimes and return them to prison. In recent decades, policy makers, researchers, and program administrators have focused almost exclusively on "recidivism," which is essentially the failure of releasees to refrain from crime or stay out of prison. In contrast, for this study the National Institute of Justice (NIJ) of the U.S. Department of Justice asked the National Research Council to focus on "desistance," which broadly covers continued absence of criminal activity and requires reintegration into society. Specifically, the committee was asked (1) to consider the current state of parole practices, new and emerging models of community supervision, and what is necessary for successful reentry and (2) to provide a research agenda on the effects of community supervision on desistance from criminal activity, adherence to conditions of parole, and successful reentry into the community. To carry out its charge, the committee organized and held a workshop focused on traditional and new models of community supervision, the empirical underpinnings of such models, and the infrastructure necessary to support successful reentry. Parole, Desistance from Crime, and Community Integration also reviews the literature on desistance from crime, community supervision, and the evaluation research on selected types of intervention.

International Conference on Advanced Intelligent Systems for Sustainable Development Van Haren This Introduction to Manufacturing focuses students on the issues that matter to practicing industrial engineers and managers. It offers a systems perspective on designing, managing, and improving manufacturing operations. On each topic, it covers the key issues, with pointers on where to dig deeper. Unlike the many textbooks on operations management, supply chain management, and process technology, this book weaves together these threads as they interact in manufacturing. It has five parts: Getting to Know Manufacturing: Fundamental concepts of manufacturing as an economic activity, from manufacturing strategy to forecasting market demand Engineering the Factory: Physical design of factories and processes, the necessary infrastructure and technology for manufacturing Making Information Flow: The "central nervous system" that triggers and responds to events occurring in production Making Materials Flow: The logistics of manufacturing, from materials handling inside the factory via warehousing to supply chain management Enhancing Performance: Managing manufacturing performance and methods to maintain and improve it, both in times of normal operations and emergencies Supported with rich illustrations and teaching aids, Introduction to Manufacturing is essential reading for industrial engineering and management students - of all ages and backgrounds - engaged in the vital task of making the things we all use.

This fresh and enlightening book offers a rounded overview of operations strategy with a particular focus on implementation. The premise of the book is that developing an effective operations strategy without its subsequent implementation will render the strategising process a waste of time and resources. The authors explain the pros and cons of existing approaches to implementation as well as offering a systematic framework for turning strategic intent into actions. They offer a fresh look at a subject whose importance within academia and industry is rapidly increasing due to the need to refocus the attention of business upon the elements that actually add value to society operations. Although operations strategy implementation is a broad and

complex subject area, by developing a mature, broad perspective of the subject the authors consider that all elements of an organisation have potential to contribute directly by adding tangible values to the operations strategy process. This study will be of great interest to academics and will also give practitioners confidence in efficiently formulating and effectively implementing strategies that reflect the needs of today s business. Advanced undergraduate and postgraduate students studying operations strategy and manufacturing strategy will find this book an essential and fascinating read. In short, it should be able to offer all those involved in operations management a comprehensive and coherent view of the subject that until now has been lacking. *Manufacturing Outsourcing* National Academies Press

Lean is a comprehensive, integral system consisting of four interdependent elements: leadership, culture, team, and practices and tools. This book examines these elements following a systematic, hierarchical orientation and explains their relevance for guiding lean initiatives. It begins with the identification and establishment of strategic goals, followed with strategy development, and lastly tactical choices. This model framework is cognizant of a firm's relative internal strengths and weaknesses as well as external opportunities and threats. Each of the four integral lean system elements is explored in depth. The model framework offers a path to develop lean leaders with practical, actionable ideas suited for applications in all industries. Throughout the book, the evolution of the current body of lean knowledge is examined as well as lean's complementary initiative, total quality management. A perspective which views lean as a customer-driven philosophy for organization-wide continuous improvement and waste elimination is maintained throughout the book. This second edition builds upon the first edition with additional lean content focused on technology, supply chain management, flexibility and agility constructs, and accounting.

With contributions from acclaimed academics and practitioners, it

covers global logistics, fashion logistics, e-logistics and green supply chains. The 4th edition features brand new chapters on supply chain management in international fashion and corporate social responsibility in the textile supply chain.

Project Management Springer Nature

This book develops a new model for lean management. The intent is to demonstrate a model framework consisting of four critical components: leadership, culture, team and tools. The development of the model and these four components will be built from empirical theories reported in the research literature and in successful applications. This framework will offer a path to develop lean leaders with practical, actionable guidelines. The model framework is suited to broad applications offering practical guidelines for manufacturing and service environments alike. The lean model will develop each of these four components, explaining their relevance and importance for guiding internal lean initiatives. In developing the model, the text will chronicle the historical development of lean noting the significant lean contributions, contributors, and dates of these contributions. This development will trace contributions to the practice of lean back hundreds of years, prior to the contributions of Henry Ford and the contributors from the Toyota system in the 1950's. The future of Lean will also be examined with the current topic of sustainability and how it has extended lean concepts with an external focus towards product life cycle concerns and social issues. This offering is different from competing offerings in three fundamental ways. First, it offers and develops of a comprehensive lean model based on a sound framework. Second, it examines a comprehensive timeline of significant lean contributions and their contributors. Third, it extends lean by looking at the future applications in the area of sustainability.

A growing heterogeneity of demand, the advent of 'long tail markets', exploding product complexities, and the rise of creative consumers are challenging companies in all industries to find new strategies to address these trends. Mass customization (MC) has emerged in the last decade as the premier strategy for companies in all branches of industry to profit from heterogeneity of demand and a broad scope of other customer demands. The research and practical experience collected in this book presents the latest thinking on how to make mass customization work. More than 50 authors from academia and management debate on what is viable now, what did not work in the past, and what lurks just below the radar in mass customization, personalization, and related fields. Edited by two leading authorities in the field of mass customization, both volumes of the book discuss, among many other themes, the latest research and insights on customization

strategies, product design for mass customization, virtual models, co-design toolkits, customization value measurement, open source architecture, customization communities, and MC supply chains. Through a number of detailed case studies, prominent examples of mass customization are explained and evaluated in larger context and perspective.
