AVERY BRIANNA

The New Demographic Regime Springer
Science & Business Media

Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers:

Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

Handbook of Population Springer Science & Business Media

Thousands of people risk their lives daily by crossing borders in search of a better life. During 2015, over one million of these people arrived in Europe. Images of refugees in distress became headline news in what was considered to be the worst humanitarian crisis in Europe since 1945. This book provides a critical overview of recent migration flows and offers answers as to why people flee, what happens during their flight and

investigates the various responses to mass migratory movements. Divided in two parts, the book addresses long-running academic, policy and domestic debates, drawing on case studies of migration in Europe, the Middle East and the Asia Pacific. Coming from a variety of different fields, the contributors provide an interdisciplinary approach and open the discussion on the reasons why migration should be examined critically.

The Rough Guide to Scandinavia United Nations

This book seeks to deepen readers' understanding of world history by investigating urbanization and the evolution of urban systems, as well as the urban world, from the perspective of

historical analysis. The theoretical framework of the approach stems directly from space-economy, and, more generally, from location theory and the theory of urban systems. The author explores a certain logic to be found in world history, and argues that this logic is spatial (in terms of spatial inertia, spatial trends, attractive and repulsive forces, vector fields, etc.) rather than geographical (in terms of climate, precipitation, hydrography). Accordingly, the book puts forward a truly original vision of urban world history, one that will benefit economists, historians, regional scientists, and anyone with a healthy curiosity.

International Maps and Atlases in Print
Harvard University Press

Explores how global markets, middlemen and destination aspirations drive the 'stepwise migrations' of Filipino and Indonesian migrant domestic workers.

Model Migration Schedules Cambridge University Press

The Rough Guide to Scandinavia covers Denmark, Norway, Sweden and Finland. With critical reviews of all the best places to eat, sleep and drink, this guide also features the politics, architecture and

environment of the area.

English Mechanic and Mirror of Science United Nations Publications

Employing the first analysis of the entire population of any British town, this book examines how overseas migrants affected society and culture in South Shields near Newcastle-upon-Tyne. Resituating Britain within global processes of migration and cultural change, it recasts British society pre-1940 as culturally and racially dynamic and diverse.

Immigration in Europe Duke University Press Books

The interdisciplinary volume offers methodologically innovative approaches to Austria's coping with issues of migration past and present. These essays show Austria's long history as a migration country. Austrians themselves have been on the move for the past 150 years to find new homes and build better lives. After the World War II the economy improved and prosperity set in, so Austrians tended to stay at home. Austria's growing prosperity made the country attractive to immigrants. After the war, tens of thousands of "ethnic Germans" expelled from Eastern Europe settled in Austria.

Starting in the 1950s "victims of the Cold War" (Hungary, Czechs and Slovaks) began looking for political asylum in Austria. Since the 1960s Austria has been recruiting a growing number of "guest workers" from Turkey and Yugoslavia to make up the labor missing in the industrial and service economies. Recently, refugees from the arc of crisis from Afghanistan to Syria to Somalia have braved perilous journeys to build new lives in a more peaceful and prosperous Europe.

Migration Policymaking in Europe
Macmillan Reference USA

The dynamics of migration in Europe have changed dramatically over the last few decades. Some countries, such as Ireland, Italy and Spain, are newcomers to an increasingly diverse Europe, having moved from being sources of emigration to destinations for migrants. Others such as France, Germany and the UK have many more years of experience with immigrants. Some of the biggest challenges facing Europe in the context of migration relate to irregular migration and integration by immigrants and refugees. What are the immigration needs of the different European countries? What are their labour

needs? Can Europe's existing population satisfy those labour needs? How can European countries work together to protect and improve the current refugee and asylum system? In the light of these pressing issues, it is vital that academics and NGOs work together to promote debate, research and the publication of reliable information about migration and refugees. To this end, academics, policy-makers and representatives of NGOs met at the University of Deusto in Bilbao, Spain (30 January-1 February 2003) to reflect on and debate the state of immigration in Europe. The results are published in this book.

International Catalogue of Scientific Literature, 1901-1914 Springer Nature
This book gathers 22 papers which were presented at the 6th International Symposium of the ICA Commission on the History of Cartography in Dubrovnik, Croatia on 13-15 October 2016. The overall conference theme was 'The Dissemination of Cartographic Knowledge: Production - Trade - Consumption - Preservation'. The book presents original research by internationally respected authors in the field of historical

cartography, offering a significant contribution to the development of this field of study, but also of geography, history and the GIS sciences. The primary target audience includes researchers, educators, postgraduate students, map librarians and archivists.

Global Migrants, Local Culture UNESCO Publishing

Refugee and Forced Migration Studies has grown from being a concern of a relatively small number of scholars and policy researchers in the 1980s to a global field of interest with thousands of students worldwide studying displacement either from traditional disciplinary perspectives or as a core component of newer programmes across the Humanities and Social and Political Sciences. Today the field encompasses both rigorous academic research which may or may not ultimately inform policy and practice, as well as action-research focused on advocating in favour of refugees' needs and rights. This authoritative Handbook critically evaluates the birth and development of Refugee and Forced Migration Studies, and analyses the key contemporary and future challenges faced by academics and practitioners

working with and for forcibly displaced populations around the world. The 52 state-of-the-art chapters, written by leading academics, practitioners, and policymakers working in universities, research centres, think tanks, NGOs and international organizations, provide a comprehensive and cutting-edge overview of the key intellectual, political, social and institutional challenges arising from mass displacement in the world today. The chapters vividly illustrate the vibrant and engaging debates that characterize this rapidly expanding field of research and practice.

Whitaker's Books in Print Amsterdam University Press

With the rare researches that focus on the cross-cultural aspects, this book tends to investigate how Arab immigrants construct and use landscape and public space in Berlin as a host city. The approach of social constructivist landscape research is chosen to highlight the effects of past and present in their experiences, including the effect of home and childhood period, social and cultural background, previous and current migration experiences including the level of integration and patterns of

settlements, the importance of networking including the sense of community and groups and shared interests, as well as place attachment, and hybridization. Biographical semi-structured interviews with 72 Arab immigrants in Berlin were conducted, in addition to both participant and site observation.

Dissemination of Cartographic Knowledge
Routledge

"This academic and personal journey into Albania's post-communist society examines the links between internal and international migration in one of Europe's poorest countries. The author follows rural migrants to urban destination both within Albania and in neighboring Greece. Their lives and experiences are captured in 150 interviews, alongside group discussions and the ethnographic observations. This rich empirical material is analysed with reference to an extensive body of literature. The author's own experience as migrant and reflections as a researcher studying her own communities of origin add valuable insights. The result is a demonstration of the complexity of the links between internal and international migration, especially from a development

perspective."--back cover.

Reporting on migrants and refugees
UN

Presenting an unprecedented, integrated view of migration in North America, this interdisciplinary collection of essays illuminates the movements of people within and between Canada, the Caribbean, Mexico, and the United States over the past two centuries. Several essays discuss recent migrations from Central America as well. In the introduction, Dirk Hoerder provides a sweeping historical overview of North American societies in the Atlantic world. He also develops and advocates what he and Nora Faires call "transcultural societal studies," an interdisciplinary approach to migration studies that combines migration research across disciplines and at the local, regional, national, and transnational levels. The contributors examine the movements of diverse populations across North America in relation to changing cultural, political, and economic patterns. They describe the ways that people have fashioned cross-border lives, as well as the effects of shifting labor markets in facilitating or hindering cross-border

movement, the place of formal and informal politics in migration processes and migrants' lives, and the creation and transformation of borderlands economies, societies, and cultures. This collection offers rich new perspectives on migration in North America and on the broader study of migration history. Contributors. Jaime R. Aguila, Rodolfo Casillas-R., Nora Faires, Maria Cristina Garcia, Delia González de Reufels, Brian Gratton, Susan E. Gray, James N. Gregory, John Mason Hart, Dirk Hoerder, Dan Killoren, Sarah-Jane (Saje) Mathieu, Catherine O'Donnell, Kerry Preibisch, Lara Putnam, Bruno Ramirez, Angelika Sauer, Melanie Shell-Weiss, Yukari Takai, Omar S. Valerio-Jiménez, Carlos G. Vélez-Ibáñez

American Bookseller Springer Science & Business Media

A classic work in the Marxist canon on political economy

International Catalogue of Scientific Literature Pluto Press

This publication contains papers presented at the European Population Forum 2004, held in Geneva in January 2004, under the auspices of the United Nations Economic Commission for Europe (UNECE) and the

United Nations Population Fund (UNFP). The Forum discussed a range of issues organised under four key themes: global population and development trends from a European perspective; childbearing and parenting in low-fertility countries; morbidity, mortality and reproductive health challenges in transition economies; international migration and ways of promoting management and integration. [Bibliographic Guide to Maps and Atlases 1996](#) United Nations

The Many Faces of Global Migration report is an introduction to what Gallup has unearthed by asking migrants and potential migrants worldwide about their lives. The data presented in this report are based on Gallup's ongoing World Poll surveys in more than 150 countries, territories and regions and more than 750,000 interviews since 2005. As such, these findings provide an unprecedented look at the different push-and-pull factors that influence migration, the experiences of those who desire to migrate to other countries permanently or temporarily for work, those who are planning to go, those who are preparing to go, those who have already left, and those who have returned

home – and what this means for governments, intergovernmental and non-governmental organizations, and other stakeholders.

[An Introduction to Population Geographies](#) Springer Nature

This comprehensive, introductory text takes an applied, interdisciplinary approach. Because one author is a sociologist and the other a demographer, the text introduces perspectives from many different disciplines. The most applied book on the market, *Demography: The Science of Population* teaches students how to use the multitude of demographic resources available to them as consumers of data. Using case studies throughout to illustrate key concepts in a realistic and concrete manner, the authors also draw examples from recent U.S. Census data, United Nations and World Bank reports, tables from the National Center for Health Statistics, and other U.S. state- and county-level sources. New to the Second Edition This second edition is divided into four main parts; each part begins with a short introduction, and all chapters include end-of-chapter summaries. All tables, related narrative,

and graphics have been updated to include data from the 2000 and 2010 census counts, more recent estimates for the United States—especially the American Community Survey—and comparable new data from international sources (e.g. World Bank, Population Research Bureau World Data Sheet). Several new figures have been added throughout the text. Part I: An Overview of Population Science, introduces the field of demography and provides a summary of its subject matter. The chapters in this part have been reorganized to reflect changes in the discipline. Chapter 1 now includes a new “the study of populations” section, a shorter Chapter 2 covers population size, and its former discussion of structure has been moved to Chapter 3. This de-emphasizes the history of population science to some extent and increases emphasis on population size as the key demographic variable. Chapter 4 presents the main principles and analytical techniques associated with the three “static” characteristics of populations: size, structure, and geographic distribution. Part II: Population Dynamics: Vital Events and Growth, reflects the

wealth of data and analytical techniques now available from The U.S. Centers for Disease Control and Prevention (CDC) and its “Wonder” utility. The first three chapters focus on the vital events of birth, death, and migration. The final chapter in this part brings this material together in a discussion of population growth: its measurement, its history, and current related policy concerns. Part III: Population Models, introduces the principles of life table analysis, population estimation, and projection. This material has been simplified and updated. Chapter 9, The Life Table: An Introduction, has been revised to accord with the new federal alignment for vital statistics between the CDC and National Institute for Health Statistics. Life tables from non-U.S. sources are increased in number and in detailed functions. Part IV: Demography in Application, provides overviews of population policy, the environment, and demographic resources, along with a brief postscript on population in the larger scheme of things. What appeared as two appendices in the first edition, one on the history of population policy and one on tourism as a type of international

migration, have been combined to create a new Chapter 14. The end-of-chapter material has been shortened and now contains a summary, key terms, and notes. A full-color enhanced eText is also available, and the second edition is accompanied by a teaching and learning package, including instructor’s manual, test bank, lecture slides, and a companion website that offers students additional resources, flashcards, and self-study quizzes.

[The Law of Accumulation and Breakdown of the Capitalist System](#) Amsterdam University Press

A deadly continental struggle, the Thirty Years War devastated seventeenth-century Europe, killing nearly a quarter of all Germans and laying waste to towns and countryside alike. Peter Wilson offers the first new history in a generation of a horrifying conflict that transformed the map of the modern world. When defiant Bohemians tossed the Habsburg emperor’s envoys from the castle windows in Prague in 1618, the Holy Roman Empire struck back with a vengeance. Bohemia was ravaged by mercenary troops in the first battle of a conflagration that would

engulf Europe from Spain to Sweden. The sweeping narrative encompasses dramatic events and unforgettable individuals—the sack of Magdeburg; the Dutch revolt; the Swedish militant king Gustavus Adolphus; the imperial generals, opportunistic Wallenstein and pious Tilly; and crafty diplomat Cardinal Richelieu. In a major reassessment, Wilson argues that religion was not the catalyst, but one element in a lethal stew of political, social, and dynastic forces that fed the conflict. By war’s end a recognizably modern Europe had been created, but at what price? The Thirty Years War condemned the Germans to two centuries of internal division and international impotence and became a benchmark of brutality for centuries. As late as the 1960s, Germans placed it ahead of both world wars and the Black Death as their country’s greatest disaster. An understanding of the Thirty Years War is essential to comprehending modern European history. Wilson’s masterful book will stand as the definitive account of this epic conflict. For a map of Central Europe in 1618, referenced on page XVI, please visit this book’s page on the Harvard University Press website.

This new edition presents key data and information on migration as well as thematic chapters on highly topical

migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

Gallup World Poll Springer Science & Business Media

Deze studie ontwikkelt een geheel nieuwe benadering van het vraagstuk: Hoe wordt migratie- en integratiebeleid in tien

Europese landen gemaakt? Wie is daarbij betrokken? Welke invloed hebben wetenschappers en maatschappelijke partners op de vorming en uitvoering van beleid? De auteurs concluderen dat beleid begrepen moet worden als resultaat van nationale historische verhoudingen en opvattingen binnen nationale contexten enerzijds, en anderzijds ontstaan is onder invloed van wereldwijde en supra-nationale invloeden.
