**The Small  
Business  
Guide to  
Apps** "O'Reilly  
Media, Inc."

If you thought that the app market was just about games and big brands, think again. Businesses of every size in every sector have built their own apps

and are reaping real commercial rewards. Because of the relatively low cost of entering the app market, smaller enterprises can level the

playing field, often outstripping their larger competitors simply because they have developed and marketed an app that delivers a service that their consumers are looking for. This book isn't about how apps can help you run your business more efficiently, or an in-depth tutorial about how to create an app for your enterprise. Instead, it provides a unique introduction

and overview of the possibilities for any small or growing business. It's a focused guide about the business of apps for those whose time is money. Connecting with customers over their mobile phones and tablets allows a more intimate and ultimately more lucrative link between businesses and consumers to be established. With this latest book in the popular Business Bites

series, you can help your business take the first steps into an exciting and growing marketplace. [Building the e-World Ecosystem](#) "O'Reilly Media, Inc." Global Brands and branding have deep historical roots. Almost anything or anyone can be branded with a name or mark for commercial or other purposes. The act of branding initiates activities in a brand ecosystem among people and organizations who have a vested interest in the brand's value. Unfortunately, a brand may experience a tragedy that can put its value and

equity at risk. Pundits will often conclude there is a primary reason for a specific brand's tragedy, however, studying the situation more deeply can reveal tragic flaws in response to brand-challenging experiences that enhance managerial wisdom. The purpose of the book is to examine the backstories of a selection of relatively well-known brands that have experienced a tragedy. The

objective is to inform how and why some brands survived and some did not. Doing so, may help leaders and managers of current brands avoid the miscues that lead to brand tragedies and possibly revive a brand when tragedy strikes. It is a book for those who need to improve their understanding of the vital importance of a brand for organizational success and who want to build and manage their brands to

continuously improve value for customers, employees, shareholders, and the well-being of society. While there will be no one right approach or silver bullet to avert or ameliorate a specific tragedy, the better prepared leaders and managers are for a brand tragedy, the greater the likelihood of avoiding one and realizing an expedient and constructive outcome when one occurs.

In recent years, China 's leaders have taken decisive action to transform information, communications, and technology (ICT) into the nation's next pillar industry. In *Networking China* , Yu Hong offers an overdue examination of that burgeoning sector's political economy. Hong focuses on how the state, in conjunction with market forces and

class interests, is constructing and realigning its digitalized sector. State planners intend to build a more competitive ICT sector by modernizing the network infrastructure, corporatizing media-and-entertainment institutions, and by using ICT as a crosscutting catalyst for innovation, industrial modernization, and export upgrades. The goal: to end China's industrial and technological dependence

upon foreign corporations while transforming itself into a global ICT leader. The project, though bright with possibilities, unleashes implications rife with contradiction and surprise. Hong analyzes the central role of information, communications, and culture in Chinese-style capitalism. She also argues that the state and elites have failed to challenge entrenched

interests or redistribute power and resources, as promised. Instead, they prioritize information, communications, and culture as technological fixes to make pragmatic tradeoffs between economic growth and social justice.
