La producción intelectual de la CEPAL en sus 70 años de existencia ha sido vasta en distintos ámbitos del desarrollo. En este libro se analizan y contextualizan los principales hitos e ideas del pensamiento económico de la CEPAL sobre recursos naturales, medio ambiente y sostenibilidad, organizados en las dos grandes etapas que han caracterizado la vida institucional: la estructuralista (1948-1990) y la neoestructuralista (de 1990 en adelante). A partir de una revisión sistemática de la literatura, se destacan ideas como el vínculo entre la especialización productiva en recursos naturales y los términos de intercambio desfavorables, formulada en los años cincuenta; la soberanía sobre los recursos naturales, en los sesenta; la enunciación temprana del principio de responsabilidades comunes pero diferenciadas, en los setenta; los estilos de desarrollo y medio ambiente, en los ochenta; la competitividad espuria, en los noventa, y la gobernanza de los recursos naturales, el estilo de desarrollo sostenible con igualdad y el gran impulso ambiental, en las dos primeras décadas del siglo XXI. El pensamiento neoestructuralista de la CEPAL es dinámico, abierto y se renueva permanentemente sin perder su tradición estructuralista. El libro aporta también elementos conceptuales para formular un neoestructuralismo ecológico.

"[S]ee at a glance what play and learning materials are most beneficial for children of different ages—from early infant through the primary grades"—P. [4] of cover.

Data Science for Undergraduates Food & Agriculture Org.

Greenhouse gas emissions by the livestock sector could be cut by as much as 30 percent through the wider use of existing best practices and technologies. FAO conducted a detailed analysis of GHG emissions at multiple stages of various livestock supply chains, including the production and transport of animal feed, on-farm energy use, emissions from animal digestion and manure decay, as well as the post-slaughter transport, refrigeration and packaging of animal products. This report represents the most comprehensive estimate made to-date of livestock's contribution to global warming as well as the sectors potential to help tackle the problem. This publication is aimed at professionals in food and agriculture as well as policy makers.

Infotech Teacher's Book National Association for the Education of Young Children

Infotech, second edition, is a comprehensive course for intermediate level learners who need to be able to understand the English of computing for study and work. Thoroughly revised by the same author it offers up to date material on this fast moving area. The course does not require a specialist knowledge of computers on either the part of the student or the teacher. The 30 units are organized into seven thematically linked sections and cover a range of subject matter, from Input/output devices for the disabled to Multimedia and Internet issues. Key features of the Teacher's Book: - exhaustive support for the teacher, with technical help where needed - a photocopiable extra activities section - answer key and tapescripts

"Marvelous . . . [Vonnegut] wheels out all the complaints about America and makes them seem fresh, funny, outrageous, hateful and lovable."—The New York Times In *Breakfast of Champions*, one of Kurt Vonnegut's most beloved characters, the aging writer Kilgore Trout, finds to his horror that a Midwest car dealer is taking his fiction as truth. What follows is murderously funny satire, as Vonnegut looks at war, sex, racism, success, politics, and pollution in America and reminds us how to see the truth. "Free-wheeling, wild and great . . . uniquely Vonnegut."—Publishers Weekly

Footprints 2 MacMillan

Unless action is taken now to make agriculture more sustainable, productive and resilient, climate change impacts will seriously compromise food production in countries and regions that are already highly food-insecure. The Paris Agreement, adopted in December 2015, represents a new beginning in the global effort to stabilize the climate before it is too late. It recognizes the importance of food security in the international response to climate change, as reflected by many countries prominent focus on the agriculture sector in their planned contributions to adaptation and mitigation. To help put those plans into action, this report identifies strategies, financing opportunities, and data and information needs. It also describes transformative policies and institutions that can overcome barriers to implementation. The State of Food and Agriculture is produced annually. Each edition contains an overview of the current global agricultural situation, as well as more in-depth coverage of a topical theme."

The Spanish American Reader Springer

Kid's Box is a six-level course for young learners. Bursting with bright ideas to inspire both teachers and students, Kid's Box gives children a confident start to learning English. It also fully covers the syllabus for the Cambridge Young Learners English (YLE) tests. The Teacher's Book contains comprehensive notes, as well as extra activities and classroom ideas to inspire both teacher and students. Level 5 begins the Flyers cycle (CEF level A2).

Footprints 1 United Nations

Winner of the Montserrat Ordóñez Prize 2018 This book provides an original and exciting analysis of Colombian women's writing and its relationship to feminist history from the 1970s to the present. In a period in which questions surrounding women and gender are often sidelined in the academic arena, it argues that feminism has been an important and intrinsic part of contemporary Colombian history. Focusing on understudied literary and non-literary texts written by Colombian women, it traces the particularities of Colombian feminism, showing how it has been closely entwined with left-wing politics and the country's history of violence. This book therefore rethinks the place of feminism in Latin American history and its relationship to feminisms elsewhere, challenging many of the predominant critical paradigms used to understand Latin American literature and culture.

Solid waste management affects every person in the world. By 2050, the world is expected to increase waste generation by 70 percent, from 2.01 billion tonnes of waste in 2016 to 3.40 billion tonnes of waste annually. Individuals and governments make decisions about consumption and waste management that affect the daily health, productivity, and cleanliness of communities. Poorly managed waste is contaminating the world's oceans, clogging drains and causing flooding, transmitting diseases, increasing respiratory problems, harming animals that consume waste unknowingly, and affecting economic development. Unmanaged and improperly managed waste from decades of economic growth requires urgent action at all levels of society. What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050 aggregates extensive solid waste data at the national and urban levels. It estimates and projects waste generation to 2030 and 2050. Beyond the core data metrics from waste generation to disposal, the report provides information on waste management costs, revenues, and tariffs; special wastes; regulations; public communication; administrative and operational models; and the informal sector. Solid waste management accounts for approximately 20 percent of municipal budgets in low-income countries and 10 percent of municipal budgets in middle-income countries, on average. Waste management is often under the jurisdiction of local authorities facing competing priorities and limited resources and capacities in planning, contract management, and operational monitoring. These factors make sustainable waste management a complicated proposition; most low- and middle-income countries, and their respective cities, are struggling to address these challenges. Waste management data are critical to creating policy and planning for local contexts. Understanding how much waste is generated—especially with rapid urbanization and population growth—as well as the types of waste generated helps local governments to select appropriate management methods and plan for future demand. It allows governments to design a system with a suitable number of vehicles, establish efficient routes, set targets for diversion of waste, track progress, and adapt as consumption patterns change. With accurate data, governments can realistically allocate resources, assess relevant technologies, and consider strategic partners for service provision, such as the private sector or nongovernmental organizations. What a Waste 2.0: A Global Snapshot of Solid Waste Management to 2050 provides the most up-to-date information available to empower citizens and governments around the world to effectively address the pressing global crisis of waste. Additional information is available at <http://www.worldbank.org/what-a-waste>.

The United Nations World Water Assessment Programme (WWAP) is hosted and led by UNESCO. WWAP brings together the work of 31 UN-Water Members and 38 Partners to publish The United

Nations World Water Development Report, (WWDR) series. The annual World Water Development Reports focus on strategic water issues. UN-Water Members and Partners, all experts in their respective fields, contribute the latest findings on a specific theme. The 2017 edition of the World Water Development Report focuses on 'Wastewater' and seeks to inform decision-makers, inside and outside the water community, about the importance of managing wastewater as an undervalued and sustainable source of water, energy, nutrients and other recoverable by-products, rather than something to be disposed of or a nuisance to be ignored. The report's title - Wastewater: The Untapped Resource - reflects the critical role that wastewater is poised to play in the context of a circular economy, whereby economic development is balanced with the protection of natural resources and environmental sustainability, and where a cleaner and more sustainable economy has a positive effect on the water quality. Improved wastewater management is not only critical to achieving the Sustainable Development Goal on clean water and sanitation (SDG 6), but also to

other goals of the 2030 Agenda for Sustainable Development.

The United Nations world water development report, 2017 Food & Agriculture Organization Data science is emerging as a field that is revolutionizing science and industries alike. Work across nearly all domains is becoming more data driven, affecting both the jobs that are available and the skills that are required. As more data and ways of analyzing them become available, more aspects of the economy, society, and daily life will become dependent on data. It is imperative that educators, administrators, and students begin today to consider how to best prepare for and keep pace with this data-driven era of tomorrow. Undergraduate teaching, in particular, offers a critical link in offering more data science exposure to students and expanding the supply of data science talent. Data Science for Undergraduates: Opportunities and Options offers a vision for the emerging discipline of data science at the undergraduate level. This report outlines some considerations and approaches for academic institutions and others in the broader data science communities to help guide the ongoing transformation of this field.
