First published in 1945, this is one of the seminal works on international human rights law, written by a legendary scholar in the field. This republication, featuring a new introduction by Professor Philippe Sands, QC, once again makes this book available to scholars and students.

Reconstructing the Afghan National Defense and Security Forces: Lessons from the U.S. Experience in Afghanistan Lippincott Williams & Wilkins

Vietnam has attained a strong record of economic growth and poverty reduction since the adoption of market-based economic reforms and pro-poor policies starting in the mid-1980s. Much of this achievement was driven by an untapped, rapidly-growing labor force and the enablement of greater labor participation in higher-productivity sectors of the economy. Yet, as Vietnam has restructured its economic activity towards manufacturing, more mechanized primary sector production and, increasingly, services, and as the labor force is projected to expand at a markedly lower rate than before, finding new sources of productivity improvements has become the key to sustaining economic growth going forward. Improvements in freight logistics can unlock productivity gains across the Vietnamese economy for years to come. The shippers and carriers that operate the supply chains that connect Vietnam to the global economy generally perceive that logistics costs in Vietnam—those incurred when moving, storing and inspecting goods—are more onerous than in peer economies like China, Malaysia and Thailand, even as they are also perceived to be more competitive than those in other developing Asian countries. While many factors may contribute to costly logistics, the main source of underperformance in Vietnam's logistics sector appears to be the inventory-carrying implications of unreliable freight itineraries, unpredictable inspection and clearance procedures, and an uncertain planning, legal and regulatory framework. By making commerce more predictable, particularly for regional and inter-continental trade, more efficient logistics can lower the cost of doing business, boost competitiveness, attract investment and generate employment. In short, efficient logistics can become a driver of lasting growth. Directed at industry practitioners and policy makers alike, this report highlights five key initiatives to improve the reliability and cost-effectiveness of transportation and logistics in Vietnam's domestic and international supply chains. These include: (i) modernizing the customs system more broadly to enable goods clearance in a consistently timely manner; (ii) enhancing regulatory transparency to minimize discretion in the regulation of commerce; (iii) promoting multimodal transport corridor planning; (iv) enhancing competition and professionalism in the trucking industry; and (v) deploying capacity more strategically at major gateways, particularly at Cai Map-Thi Vai.

This publication is the second in a series of lessons learned reports which examine how the U.S. government and Departments of Defense, State, and Justice carried out reconstruction programs in Afghanistan. In particular, the report analyzes security sector assistance (SSA) programs to create, train and advise the Afghan National Defense and Security Forces (ANDSF) between 2002 and 2016. This publication concludes that the effort to train the ANDSF needs to continue, and provides recommendations for the SSA programs to be improved, based on lessons learned from careful analysis of real reconstruction situations in Afghanistan. The publication states that the United States was never prepared to help create Afghan police and military forces capable of protecting that country from internal and external threats. It is the hope of the Special Inspector General for Afghanistan Reconstruction (SIGAR), John F. Sopko, that this publication, and other SIGAR reports will create a body of work that can help provide reasonable solutions to help United States agencies and military forces improve reconstruction efforts in Afghanistan. Exploring the question as to why more than half the world continues to have little or no access to medical imaging and radiology, this important second edition, fully revised and expanded, offers not only answers but practical solutions, providing new tools, ideas, and strategies for bringing vital radiology to low-resource areas. Based on RAD-AID's ten years of work (2008-2018) serving indigent communities around the world, the book's interdisciplinary approach offers the synthesis of business management, government policy formulation, clinical methods, and engineering in order to integrate economic development, technology innovation, clinical model planning, educational strategies, and public health measures. The gold-standard title in the field, *Radiology in Global Health, 2nd Edition* is intended for a broad audience, including physicians (especially radiologists and radiology residents), radiology technologists, radiology nurses, sonographers, hardware/software engineers, policy-makers, business leaders, researchers, and public health specialists at all levels who use or implement health care services for underserved populations. In addition, as health care providers use radiology in the process of clinical decision-making, this title is also designed for clinical physicians, nurses, nurse-practitioners, physician assistants, and paramedical personnel. Administrators and public health personnel will also be interested, as the planning of radiology services for health care systems at both the facility level and at the population level requires a clear understanding of the technological challenges and management opportunities.

Often we can feel trapped in thoughts, trapped in identity, trapped in conditioning. It can seem as if we are trapped in the cage of our own minds. This book points you out of this, to show you that both the cage and the person who feels trapped in it, are not real. This book also looks at some of the insane ways we have been taught to approach life and to function in the world, and how to be free of these conditioned behaviours. The content within each chapter is split into passages, each passage being a pointer in itself. You may feel inclined to only read a single passage, and pause to allow time for the words to sink in before moving on. This book is very useful for contemplative or meditative reading. Once you understand what is meant by the cage (simply the conditioned, personal mind that creates suffering) - this book becomes a helpful guide in that as well as being able to read it conventionally from cover to cover - you can pick it up and read any passage at random. Rather than being a book that teaches you anything to remember, it is a tool to point you back towards who you really are before conditioning took over. May this book help you realise your inherent freedom, and allow you to function sanely, effectively and happily in the world.

Qigong massage has been used in China for thousands of years as a means to achieve health and wellbeing, and to treat a wide variety of ailments. This book teaches parents a simple qigong massage programme that has been developed specifically for the needs of children with autism spectrum disorders (ASDs). With step-by-step instructions and an accompanying DVD demonstrating the technique in action, this book offers parents clear guidance on how to adopt qigong massage into their child's daily routine successfully. The program is based around a core 15 minute massage that, when performed regularly, has been shown to greatly improve mood and behavior, sleeping patterns, and language and social skills. Also included is information on diet, advice on reading a child's body language during massage, and helpful progress checklists. Qigong massage is the ideal therapy for parents looking for an alternative way to strengthen the mind, body and sensory abilities of their young child with autism aged 6 and under.

This work aims to advance the intellectual understanding of the emergence and reemergence of infectious diseases. Practitioners of diverse disciplines - epidemiology, evolutionary biology, environmental sciences, ecology, climatology, social and behavioural sciences, entomology, microbiology, parasitology and virology - report on recently developed techniques from many areas, including molecular biology, genetics,

mathematical modelling and remote sensing. These techniques are exploited in an attempt to understand global configurations of infectious disease emergence. Analysis of historical examples reveals patterns not apparent during a single lifetime of observation. This volume emphasises the creative use of cross-disciplinary approaches to extend the limits of knowledge in this important area. These 32 papers were presented at a workshop held by the Harvard School of Public Health at Woods Hole, Massachusetts, 7th-10th November.
