"Storm spotting gives amateur radio operators another way to use their skills as communicators. In an average year, the US experiences more than 10,000 severe thunderstorms, 5,000 floods, and more than 1,000 tornadoes, often causing hundreds of injuries and deaths, as well as billions of dollars in damages. During these weather events, thousands of ham volunteers provide real-time information to partners like emergency management and forecasters at the National Weather Service. The near-real-time information these partners get from hams helps them issue weather watches, warnings, and advisories. Storm Spotting and Amateur Radio can help you become one of those volunteers, providing ground-truth information when it is needed most"--Back cover.

Atmospheric Science at NASA critically examines this politically controversial science, dissecting the often convoluted roles, motives, and relationships of the

various institutional actors involved—among them NASA, congressional appropriation committees, government weather and climate bureaus, and the military.

Volcanoes are essential elements in the delicate global balance of elemental forces that govern both the dynamic evolution of the Earth and the nature of life itself. Without volcanic activity, life as we know it would not exist on our planet. Although beautiful to behold, volcanoes are also potentially destructive, and understanding their nature is critical to prevent major loss of life in the future. Richly illustrated with over 300 original color photographs and diagrams the book is written in an informal manner, with minimum use of

jargon, and relies heavily on first-person, eye-witness accounts of eruptive activity at both "red" (effusive) and "grey" (explosive) volcanoes to illustrate the full spectrum of volcanic processes and their products. Decades of teaching in university classrooms and fieldwork on active volcanoes throughout the world have provided the authors with unique experiences that they have distilled into a highly readable textbook of lasting value. Questions for Thought, Study, and Discussion, Suggestions for Further Reading, and a comprehensive list of source references make this work a major resource for further study of volcanology. Volcanoes maintains three core foci: Global perspectives explain volcanoes in terms of their tectonic positions on Earth and

their roles in earth history Environmental perspectives describe the essential role of volcanism in the moderation of terrestrial climate and atmosphere Humanitarian perspectives discuss the major influences of volcanoes on human societies. This latter is especially important as resource scarcities and environmental issues loom over our world, and as increasing numbers of people are threatened by volcanic hazards Readership Volcanologists, advanced undergraduate, and graduate students in earth science and related degree courses, and volcano enthusiasts worldwide. In November 1991 the American flag was lowered for the last time at Clark Air Base in the Philippines. This act brought to an end American military presence in the Philippines that extended back over 90 years. It also represented the final act in a drama that began with the initial rumblings in April of that year of the Mount Pinatubo volcano, located about nine miles to the east of Clark. This book tells the remarkable story of the men and women of the Clark community and their ordeal in planning for and carrying out their evacuation from Clark in face of the impending volcanic activity. It documents the actions of those who remained on the base during the series of Mount Pinatubo's eruptions, and the packing out of the base during the subsequent months. This is the story of

the Ash Warriors, those Air Force men and women who carried out their mission in the face of an incredible series of natural disasters, including volcanic eruption, flood, typhoons, and earthquakes, all of which plagued Clark and the surrounding areas during June and July 1991.

Language, more than anything else, is what makes us human. It appears that no communication system of equivalent power exists elsewhere in the animal kingdom. Any normal human child will learn a language based on rather sparse data in the surrounding world, while even the brightest chimpanzee, exposed to the same environment, will not. Why not? How, and why, did language evolve in our species and not in others? Since

Darwin's theory of evolution, questions about the origin of language have generated a rapidly-growing scientific literature, stretched across a number of disciplines, much of it directed at specialist audiences. The diversity of perspectives - from linguistics, anthropology, speech science, genetics, neuroscience and evolutionary biology - can be bewildering. Tecumseh Fitch cuts through this vast literature, bringing together its most important insights to explore one of the biggest unsolved puzzles of human history.

After witnessing an act of domestic terrorism while training on his bike, Jake is found near death, with a serious head injury and unable to remember the plane

crash or the aftermath that landed him in the hospital. A terrorist leader's teenage daughter, Betsy, is sent to kill Jake and eliminate him as a possible witness. When Jake's mother blames his head injury for his tales of attempted murder, he has to rely on his girlfriend, Laurissa, to help him escape the killers and the law enforcement agents convinced that Jake himself had a role in the crash. Mike Mullin, author of the Ashfall series, delivers a gripping story with memorable characters and all-too-real scenarios.

Darla Edmunds has faced a lot of challenges in her seventeen years: Her dad died in a farming accident when she was fourteen. Her mother retreated into hyper-religiosity, leaving Darla to run the

family farm almost single-handedly. But those struggles pale in comparison to the one she faces after the Yellowstone supervolcano erupts, plummeting the world-and Darla's small corner of Iowa-into a cataclysmic natural disaster.

DARLA'S STORY is book #0.5 of the ASHFALL trilogy (or should it be called a three-and-a-half-ology?) It's told from Darla's perspective, beginning with the eruption and ending when an injured stranger keels over in her barn. If you're new to the world of ASHFALL, DARLA'S STORY is a great place to start. If you've read ASHFALL and loved Darla, this book was written for you. Enjoy!

“Extremely interesting . . . Young people interested in medicine or scientific discovery will find this book engrossing, as will history students” (School Library Journal). [He had] a fever that hovered around 104 degrees. His skin turned yellow. The whites of his eyes looked like lemons. Nauseated, he gagged and threw up again and again . . . Here is the true story of how four Americans and one Cuban tracked down a killer, one of the world’s most vicious plagues: yellow fever. Journeying to fever-stricken Cuba in the company of Walter Reed and his colleagues, the reader feels the heavy air, smells the stench of disease, hears the whine of mosquitoes biting human volunteers during surreal experiments. Exploring themes of courage, cooperation, and the ethics of human

experimentation, this gripping account is ultimately a story of the triumph of science. “[A] powerful exploration of a disease that killed 100,000 U.S. citizens in the 1800s.” —Kirkus Reviews Includes photos

In the highly anticipated stand-alone sequel to *The End of All Things*, Lissa Bryan returns readers to a world devastated by disease, and the breakdown of modern society. Two years

after a horrific virus swept the globe, decimating the world's population, Carly Daniels and her husband, Justin, have made a safe home in the isolated southern town of Colby. Protected by fences and a vigilant population, the residents there had somehow managed to keep the Infection out. Until the sight of Carly and Justin's healthy baby girl convinced them it was safe to allow Outsiders in. Now, in the wake of fresh losses, the small band of survivors struggles to rebuild a community. With only nineteenth-century technology to aid them, they must learn skills long forgotten to provide for their basic needs. Each day brings new challenges, and every choice they make affects their long-term survival. While Carly and Justin adjust to a growing family, and to their

roles as community leaders, they must rely on one another for strength and support when they face difficult questions. Carly has to decide how to move forward in a world where equality, justice, and freedom from tyranny are no longer guaranteed. And when new threats emerge, she has to decide what she is willing to do-and how far she's willing to go-to protect what she has worked so hard to build. When the end has come and gone, it's a journey down a long and broken road through The Land of the Shadow.

The Land of the Shadow After it Happened

A deadly plague has devastated Earth, killing all the adults. Lisa and her younger brother Todd are struggling to stay alive in a world where no one is

safe. Other children along Grand Avenue need help as well. They band together to find food, shelter, and protection from dangerous gangs invading their neighborhood. When Tom Logan and his army start making threats, Lisa comes up with a plan and leads her group to a safer place. But how far is she willing to go to protect what's hers?

Ashen Winter Permuted Press+ORM

The Yellowstone supervolcano nearly wiped out the human race. Now, almost a year after the eruption, the survivors seem determined to finish the job. Communities wage war on each other, gangs of cannibals roam the countryside, and what little government survived the eruption has collapsed completely. The ham radio has gone silent. Sickness, cold, and starvation are

the survivors' constant companions. When it becomes apparent that their home is no longer safe and adults are not facing the stark realities, Alex and Darla must create a community that can survive the ongoing disaster, an almost impossible task requiring even more guts and more smarts than ever--and unthinkable sacrifice. If they fail . . . they, their loved ones, and the few remaining survivors will perish. This epic finale has the heart of *Ashfall*, the action of *Ashen Winter*, and a depth all its own, examining questions of responsibility and bravery, civilization and society, illuminated by the story of an unshakable love that transcends a post-apocalyptic world and even life itself. **Sunrise** Houghton Mifflin Harcourt
More than six months after the eruption

of the Yellowstone supervolcano, Alex and Darla retrace their steps to Iowa hoping to find Alex's parents and bring them to the tenuous safety of Illinois, but the journey is ever more perilous as the remaining communities fight to the death for food and power.

Myth and Geology Geological Society of London

Many visitors to Yellowstone National Park don't realize that the boiling hot springs and spraying geysers are caused by an underlying supervolcano, so large that the caldera can only be seen by plane or satellite. And by some scientific measurements, it could be overdue for an eruption. For Alex, being left alone for the weekend means having the freedom to play computer games and hang out with his friends without hassle from his

mother. Then the Yellowstone supervolcano erupts, plunging his hometown into a nightmare of darkness, ash, and violence. Alex begins a harrowing trek to search for his family and finds help in Darla, a travel partner he meets along the way. Together they must find the strength and skills to survive and outlast an epic disaster.

NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today's message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-

million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? Buyology is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to

win our loyalty, our money, and our minds.

The Lost Civilization of Lemuria

Geological Society of America

A compelling new portrait of the lost realm of Lemuria, the original motherland of humanity • Contains the most extensive and up-to-date archaeological research on Lemuria • Reveals a lost, ancient technology in some respects more advanced than modern science • Provides evidence that the perennial philosophies have their origin in Lemurian culture Before the Indonesian tsunami or Hurricane Katrina's destruction of New Orleans, there was the destruction of Lemuria. Oral tradition in Polynesia recounts the story of a splendid kingdom that was carried to the bottom of the sea by a

mighty “warrior wave”--a tsunami. This lost realm has been cited in numerous other indigenous traditions, spanning the globe from Australia to Asia to the coasts of both South and North America. It was known as Lemuria or Mu, a vast realm of islands and archipelagoes that once sprawled across the Pacific Ocean. Relying on 10 years of research and extensive travel, Frank Joseph offers a compelling picture of this motherland of humanity, which he suggests was the original Garden of Eden. Using recent deep-sea archaeological finds, enigmatic glyphs and symbols, and ancient records shared by cultures divided by great distances that document the story of this

sunken world, Joseph painstakingly re-creates a picture of this civilization in which people lived in rare harmony and possessed a sophisticated technology that allowed them to harness the weather, defy gravity, and conduct genetic investigations far beyond what is possible today. When disaster struck Lemuria, the survivors made their way to other parts of the world, incorporating their scientific and mystical skills into the existing cultures of Asia, Polynesia, and the Americas. Totem poles of the Pacific Northwest, architecture in China, the colossal stone statues on Easter Island, and even the perennial philosophies all reveal their kinship to this now-vanished civilization.
