How to Record and Mix Great Vocals Routledge

The historical significance of music-makers, music scenes, and music genres has long been mediated through academic and popular press publications such as magazines, films, and television documentaries. Media Narratives in Popular Music examines these various publications and questions how and why they are constructed. It considers the typically linear narratives that are based on simplifications, exaggerations, and omissions and the histories they construct - an approach that leads to totalizing "official" histories that reduce otherwise messy narratives to one-dimensional interpretations of a heroic and celebratory nature. This book questions the basis on which these mediated histories are constructed, highlights other, hidden, histories that have otherwise been neglected, and explores a range of topics including consumerism, the production pressure behind documentaries, punk fanzines, Rolling Stones covers, and more.

Craig Anderton's Home Recording for Musicians Hodder Education

A historical study of Chile's twin experiments with cybernetics and socialism, and what they tell us about the relationship of technology and politics. In *Cybernetic Revolutionaries*, Eden Medina tells the history of two intersecting utopian visions, one political and one technological. The first was Chile's experiment with peaceful socialist change under Salvador Allende; the second was the simultaneous attempt to build a computer system that would manage Chile's economy. Neither vision was

fully realized—Allende's government ended with a violent military coup; the system, known as Project Cybersyn, was never completely implemented—but they hold lessons for today about the relationship between technology and politics. Drawing on extensive archival material and interviews, Medina examines the cybernetic system envisioned by the Chilean government—which was to feature holistic system design, decentralized management, human-computer interaction, a national telex network, near real-time control of the growing industrial sector, and modeling the behavior of dynamic systems. She also describes, and documents with photographs, the network's Star Trek-like operations room, which featured swivel chairs with armrest control panels, a wall of screens displaying data, and flashing red lights to indicate economic emergencies. Studying project Cybersyn today helps us understand not only the technological ambitions of a government in the midst of political change but also the limitations of the Chilean revolution. This history further shows how human attempts to combine the political and the technological with the goal of creating a more just society can open new technological, intellectual, and political possibilities. Technologies, Medina writes, are historical texts; when we read them we are reading history.
