The landmark work on the social significance of childhood. The original and vastly influential ideas of Erik H. Erikson underlie much of our understanding of human development. His insights into the interdependence of the individuals' growth and historical change, his now-famous concepts of identity, growth, and the life cycle, have changed the way we perceive ourselves and society. Widely read and cited, his works have won numerous awards including the Pulitzer Prize and the National Book Award. Combining the insights of clinical psychoanalysis with a new approach to cultural anthropology, *Childhood and Society* deals with the relationships between childhood training and cultural accomplishment, analyzing the infantile and the mature, the modern and the archaic elements in human motivation. It was hailed upon its first publication as "a rare and living combination of European and American thought in the human sciences" (Margaret Mead, *The American Scholar*). Translated into numerous foreign languages, it has gone on to become a classic in the study of the social significance of childhood.

**HEALTH BEHAVIOR AS BASIC RESEARCH** Health behavior is not a traditional discipline, but a newly emerging interdisciplinary field. It is still in the process of establishing its identity. Few institutional or organizational structures, i. e. , departments and programs, reflect it, and few books and journals are directed at it. The primary objective of this book is thus to identify and establish health behavior as an important area of basic research, worthy of being studied in its own right. As a basic research area, health behavior transcends commitment to a particular behavior, a specific illness or health problem, or a single set of determinants. One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants, rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change. The book is thus organized primarily in terms of the size of the determinants of concern, rather than in terms of specific health behaviors, or specific health problems or conditions. With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks, the second part moves from smaller to larger systems, informing the reader about basic research that demonstrates how health behavior is determined by personal, family, social, institutional, and cultural factors. These distinctions reflect some arbitrariness: the family, organizations, and institutions, for example, are social units.

Why do people say one thing and do another? Why do people behave inconsistently from one situation to another? How do people translate their beliefs and feelings into actions? This thoroughly revised and updated edition describes why and how beliefs, attitudes and personality traits influence human behaviour. Building on the strengths of the previous edition, it covers recent developments in existing theories and details new theoretical approaches to the attitude-behaviour relationships. These novel developments provide insight into the predictability - and unpredictability - of human behaviour. The book examines: Recent innovations in the assessment of attitudes and personality The implications for prediction of behaviour of these innovations Differences between spontaneous and reasoned processes The most recent research on the relations between intentions and behaviour While the book is written primarily for students and researchers in social, personality, and organizational psychology, it also has wide-reaching appeal to students, researchers and professionals in the fields of health and social welfare, marketing and consumer behaviour.

Public Policy Analysis, the most widely cited book on the subject, provides readers with a comprehensive methodology of public policy analysis. Starting from the premise that policy analysis is an applied social science discipline designed for solving practical problems facing public and nonprofit organizations, the book bridges the gap between theory and practice. It provides practical skills for conducting policy analysis and communicating findings through memos, position papers, and other forms of structured analytical writing. The book asks readers to critically analyze the arguments of policy practitioners as well as political scientists, economists, and political philosophers.

This guide to practical dietary, anthropometric, and biochemical nutritional assessment introduces students to the details of standardized protocols while emphasizing the importance of rigorous methodologies. Each receives a comprehensive practical treatment which includes an overview of its relative advantages, limitations, and applicability. Topics include quantitative and qualitative dietary methods and the evaluation of nutrient intakes; the assessment of growth, fat-free mass, and body fat; and the evaluation of anthropometric measurements and reference data from national surveys. Chapters on biochemical assessment deal with specific group nutrients, outlining methods selected for their appropriateness for undergraduate students with limited practical laboratory experience. Interpretive criteria for evaluating the biochemical measurements are included at the end of each method's exposition. This book will be of great use and interest to students studying nutritional assessment in dietetics, home economics, nutritional sciences, public health, and nursing, as well as to health professionals involved in nutritional assessment.

In August, 1985, the 2nd International Conference on Illness Behaviour was held in Toronto, Ontario, Canada. The first International Conference took place one year previous in Adelaide, South Australia, Australia. This book is based on the proceedings of the second conference. The purpose behind this

conference was to facilitate the development of a single integrated model to account for illness experience and presentation. A major focus of the conference was to outline methodological issues related to current behaviour research. A multidisciplinary approach was emphasized because of the bias that collaborative efforts are likely to be the most successful in achieving greater understanding of illness behaviour. Significant advances in our knowledge are occurring in all areas of the biological and social sciences, albeit more slowly in the latter areas. Marked specialization in each of these areas has lead to greater difficulty in integrating new knowledge with that of other areas and the development of a meaningful cohesive model to which all can relate. Thus there is a major need for forums such as that provided by this conference.

Pernikahan merupakan fitrah manusia, dan setiap orang normal pasti akan menjalaninya, karena pada dasarnya manusia diciptakan oleh Allah Swt. berpasang-pasangan, ada pria ada wanita, agar manusia mengembangkan dan meneruskan keturunannya. Pernikahan yang dalam istilah agama adalah melakukan suatu akad atau perjanjian untuk mengikatkan diri antara seorang laki-laki dan wanita untuk menghalalkan hubungan kelamin antara kedua belah pihak dengan dasar suka rela dan keridhoan kedua belah pihak untuk mewujudkan kebahagiaan hidup berkeluarga yang diliputi rasa kasih sayang ketentraman dengan cara yang di ridhoi oleh Allah Swt. Oleh pemerintah pernikahan diatur melalui UU No. 1 Tahun 1974 yaitu undang-undang perkawinan. Pernikahan dini atau di usia yang sangat belia kini menjadi masalah serius. Pernikahan yang dilakukan remaja putri berusia di bawah 20 tahun diketahui masih tinggi di Indonesia. Pemerintah pun tengah mencari formula yang tepat untuk mengurangi tingginya angka pernikahan di kalangan remaja. Tentu pernikahan muda-mudi di bawah usia 20 tahun akan menimbulkan masalah. Masalah bagi pasangan yang menikah di usia muda adalah belum siapnya alat reproduksi. Masalah bertambah jika kondisi ekonomi keluarga muda tersebut belum kukuh sehingga meningkatkan jumlah perceraian. Oleh karena itu, Badan Kependudukan dan Keluarga Berencana Nasional menaruh perhatian serius terhadap masalah ini. Badan Koordinasi Keluarga Berencana Nasional Jawa Barat mencatat hampir 26% dari jumlah penduduk 46,7 juta melakukan pernikahan dini. Penyebab pernikahan dini

dipengaruhi oleh berbagai macam faktor, di antaranya adalah rendahnya tingkat pendidikan, faktor ekonomi atau lingkungan, faktor pernodohan dan faktor karena cinta. Dampak pernikahan dini akan menimbulkan dampak dalam rumah tangga, seperti cara mengasuh anak termasuk di dalamnya adalah pemenuhan kebutuhan asuh, asah, dan asih, pertengkaran, perkecokan dan bentrokan antara suami istri.
