With two distinct objectives, this text's approach to managerial economics takes models from recent economics research and applies the research to the internal structure of a firm. After teaching basic applied economics, the authors look inside the firm and apply this analysis to management decision making. Authors Brickley, Smith, and Zimmerman contend that organizational architecture consists of three aspects of corporate organization: the assignment of decision

rights within the company; methods of rewarding individuals; the structure of systems to evaluate the performance of both individuals and business units.

These three components can be likened to a stool with three legs. If one of the legs is shorter, the stool is out of balance. These three elements must be in balance in the organization as well.

The classic history of economic thought through the ages—now fully updated and expanded Hesiod defined the basic economic problem as one of scarce resources, a view still held by economists today. Diocletian tried to save the Roman Empire with wage and price fixes—a strategy that has not gone entirely out of style. Roger Backhouse takes readers from the ancient world to the frontiers of game theory, mechanism design, and engagements with climate science, presenting an essential history of a discipline that economist Alfred Marshall called “the study of mankind in the ordinary business of life.” Backhouse

introduces the many fascinating figures who have thought about money and markets down through the centuries—from philosophers and theologians to politicians and poets—and shows how today's economic ideas have their origins in antiquity. This updated edition of *The Ordinary Business of Life* includes a new chapter on contemporary economics and the rest of the book has been thoroughly revised.
