*Le vite de' pontefici di Bartolomeo Platina Cremonese, dal Salvator nostro fino a Clemente undecimo* Lulu.com

The Baroque excesses of the early eighteenth century inspired a rebellion among a consortium of British architects and their patrons. Taking their cue from the Renaissance works of Andrea Palladio, these Neo-Palladians returned the direction of British architecture toward classical principles. The Vitruvius Britannicus (British Vitruvius) reflects their vision, offering magnificent copperplate engravings of great English country houses and public buildings. The sequel to Dover's first edition of Vitruvius Britannicus, this volume comprises three folios, originally published between 1739 and 1771. More than one hundred plates depict facades, ground plans, exterior elevations, and perspective views of grand buildings, including royal palaces at

Richmond, Kensington, and Hampton Court as well as country homes and gardens throughout England and Scotland. The Neo-Palladian works featured in this volume and its predecessor continue to influence architects and designers. Handsome and modestly priced, this new edition of an architectural classic is an essential complement to any design library.

**A Century of Artists Books** Editorial MAXTOR

This selection of articles from the Encyclopedia of the Eye covering retina, optics/optic nerve and comparative topics constitutes the first reference for scientists, post docs, and graduate students with an interest beyond standard textbook materials. It covers the full spectrum of research on the retina - from the basic biochemistry of how nerve cells are created to information on neurotransmitters, comparisons of the structure and neuroscience of peripheral vision systems in different species, and all the way through to injury repair and other clinical applications. The first single volume to integrate comparative studies into a comprehensive resource on the neuroscience of the retina Chapters are carefully selected from the Encyclopedia of the Eye by one of the world's leading vision researchers The best researchers in the field provide their conclusions in the context of the latest experimental results

Vitruvius Britannicus Cambridge University Press

As the first comprehensive reference for the eye, its support structures, diseases, and treatments, Encyclopedia of the Eye is an important resource for all visual scientists, ophthalmologists, and optometrists, as well as researchers in immunology, infectious disease, cell biology, neurobiology and related disciplines. This four-volume reference is unique in its coverage

of information on all tissues important for vision, including the retina, cornea and lens. It also covers the physiological and pathophysiological processes that affect all eye tissues. This Encyclopedia is invaluable for graduate students and postdoctoral fellows who are seeking an introduction to an area of eye research. Each chapter explains the basic concepts and provides references to relevant chapters within the Encyclopedia and more detailed articles across the wider research literature. The Encyclopedia is also particularly useful for visual scientists and practitioners who are researching a new area, seeking deeper understanding of important research articles in fields adjacent to their own, or reviewing a grant outside their immediate area of expertise. Written by experts at a level that permits students to grasp key elements of a specific subject Provides an entryway into the major features of current eye research No other source puts this much information, so well-indexed and with so many helpful full color figures and graphics, in the hands of the ophthalmic scientist
