<i>Women's Bodies</i> Springer Nature Examines the legal status and rights of women in the United States throughout history.	
<i>Young Women and the Body</i> Springer What makes a woman's body beautiful? Plastic surgery, cosmetic surgery and non-surgical interventions such as Botox are changing women's bodies physically and affecting cultural notions and expectations of what it means to be a woman. Yet where does the law stand? Is the renovation of women's bodies legal? This book explores a range of topics, including: whether shape-changing by surgical and non-surgical means is 'really' what women want; the question of legal intervention when operations, injections and other methods go wrong; the impact of consent determinations on whether women can or cannot freely seek changes to their body structure; and the role which culture and social expectations play in women's decision-making. Taking a legal perspective on the vast range of 'beauty' interventions available to women, Scutt discusses women's perceptions of body and beauty, pressures on women to conform to 'idealised' notions of the perfect woman's body, and outcomes of legal actions including those taken by individual women who are unhappy with results, as well as those launched against companies trading in products advertised as safe and for women's benefit. <i>Beauty, Women's Bodies and the Law</i> will appeal to readers with an interest in women's and gender studies, law, and cultural studies.

Winner of the Bridgewater State College Class of 1950 Distinguished Faculty Research Award Toward the end of the nineteenth century, as young

women began entering college in greater numbers than ever before, physicians and social critics charged that campus life posed grave hazards to the female constitution and women's reproductive health. "A girl could study and learn," Dr. Edward Clarke warned in his widely read 1873 book *Sex in Education*, "but she could not do all this and retain uninjured health, and a future secure from neuralgia, uterine disease, hysteria, and other derangements of the nervous system." For half a century, ideas such as Dr. Clarke's framed the debate over a woman's place in higher education almost exclusively in terms of her body and her health. For historian Margaret A. Lowe, this obsession offers one of the clearest expressions of the

social and cultural meanings given to the female body between 1875 and 1930. At the same time, the "college girl" was a novelty that tested new ideas about feminine beauty, sexuality, and athleticism. In *Looking Good*, Lowe examines the ways in which college women at three quite different institutions—Cornell University, Smith College, and Spelman College—regarded their own bodies in this period. Contrasting white and black students, single-sex and coeducational schools, secular and religious environments, and Northern and Southern attitudes, Lowe draws on student diaries, letters, and publications; institutional records; and accounts in the popular press to examine the process by which new, twentieth-century ideals of the female body took hold in America.
