When collaboration works, the results can be breath-taking! But it doesn't always deliver on its potential. Collaboration has been defined as "an unnatural act practiced by non-consenting adults". And often that's exactly what it is! Some collaboration can be painfully difficult with the result that problems are either ignored or smoothed over until the collaboration falters or disintegrates, or self-interest and personal agendas take over and conflict quickly arises. Collaboration and partnerships work well in the aid sector because they have to - no one body has the resources to solve massive problems on their own. Business often sees the advantages of collaboratively sharing costs without fully recognizing the shift in mindset that is required to take managers with a "winner takes all" worldview and get them performing

effectively in a win-win world. Part of the solution lies in bringing consciousness to the workplace and developing it as a core competence. A conscious approach to business relationships, planning, and delivery can enable individuals and organizations to truly think about what they are doing, make changes where needed, and become more effective. It is a particularly effective way of managing the multiple and occasionally conflicting stakeholder objectives inherent in any collaborative project. The author draws on his experience in the aid sector and with non-profit organizations to describe the building blocks that underpin successful collaboration, and inspires us to re-think the way we work together, for good.

Esta tercera edición de *Introducción a la Microeconomía. Comportamientos, intercambio y mercados*, es el resultado de un compromiso de los autores por incorporar aquello más novedoso que está en condiciones de formar parte de un manual de introducción y, también, el resultado de una revisión que los autores hacen a partir de su propio estudio, experiencia y maduración. La estructura del libro en torno a la teoría general se mantiene respecto de ediciones anteriores. Es decir, se sigue enmarcando la ciencia económica a partir de un hecho económico bien caracterizado, desarrollando un primer bloque de teoría del comportamiento, tanto desde el lado de los consumidores como desde el lado de los productores y un segundo bloque en el que seguimos introduciendo las cuestiones relativas al intercambio y la concreción institucional de los mercados y sus estructuras. Cada capítulo se desarrolla de un modo algo diferente al de ediciones anteriores. En concreto, en esta edición hay más esquemas gráficos, lo que no ha ido en detrimento de una presentación diagramática tradicional como la de ediciones

anteriores. Además, se han introducido en cada capítulo algunos recuadros, llamados textos o subrayados, que introducen citas de textos muy arraigados en el estudio de la Economía, cuyos autores han contribuido de forma decisiva al avance científico de esta disciplina en general y de los conceptos que en particular se están manejando en determinado capítulo. En fin, una tercera edición de novedades de contenido y continente que revisan, amplían y actualizan los fundamentos básicos de economía. Los autores: Miguel Cuervo es doctor en Ciencias Económicas y Master en Finanzas. Profesor titular de la Universidad Rey Juan Carlos donde ha sido vicerrector de extensión universitaria. Autor de numerosas publicaciones de investigación, actualmente es consejero de la Comisión Nacional de la Competencia. Teresa Freire es licenciada en Ciencias Económicas y EE. Y Master en Dirección Financiera. Autora de varios artículos y libros relacionados con micro y macroeconomía, es profesora de área de Economía en ESIC. **ÍNDICE** Introducción.- El comportamiento de los consumidores: del deseo insaciable al mundo de las limitaciones: el equilibrio que viene.- El comportamiento de los productores: el arte de conocer los deseos de los otros y la forma de producir las cosas que los satisfacen.- El intercambio.- Un lugar de encuentro para el intercambio: el mercado.- Elección, información y tiempo en economía.- Formas de mercado (2): competencia perfecta o cuando nadie tiene suficiente poder.- Formas de mercado (2): competencia imperfecta o cuando alguien tiene mucho poder.- Formas de mercado (3): diferenciación y competencia o el momento en que el marketing se convierte en una variable fundamental del intercambio.- Bienes públicos y extremidades: más allá de los mercados. *Genetic Testing and the Governance of Risk in the Contemporary Economy* Frontiers Media SA

 Economic Analysis of the Arbitrator's Function Bruno Guandalini  
 Arbitration has become an important market, where arbitrators are rational economic agents maximizing their utility. Although this is self-evident, it is rarely discussed. This penetrating book is the first to comprehensively analyze the market for arbitrators and arbitrators' economic role within it. In great depth, the author tackles such salient issues as the following: effect of perceived inefficiencies and high costs on arbitration legitimacy; alleged commercialization of the arbitrator's function; possible ethical problem raised by financial remuneration for rendering justice; what motivates a person to arbitrate; market for arbitrators' functioning and failures, providing a better understanding of how actors could behave in such a specific market; structural and artificial entry barriers; effect of an arbitrator's strategic behavior on the arbitrator's function; limitations on an arbitrator's rationality; and preventing and correcting these limitations. Numerous references to customs and procedures in major arbitral jurisdictions and to international laws and conventions affecting the efficiency of the arbitrator's function are included. Pursuing a non-prescriptive analysis, the author draws on the discipline of law and economics, rational choice theory, behavioral economics, and psychological work on bounded rationality. Understanding the arbitrator's function as a legal institution that is influenced by the market, this pioneer in developing and systematizing the study of the market for arbitrators and how it works will prove of inestimable value to all stakeholders in the arbitration market. Arbitrators, policymakers, regulators, and academics will be enabled to open the way to a more efficient market for arbitrators and betterment in arbitration worldwide.

The book integrates texts prepared by a single author and is based on a variety of fundamental concepts and instruments applied in investment decisions from a diversity of texts. The book approaches investment decisions from the perspective of the financial system and economic agents (which can be investors and borrowers of funds, firms, or individuals). The wide variety of assets available is one of the reasons why new methods for managing an investment portfolio often emerge. Thus, by opting for a more comprehensive approach, it is possible to cover a more comprehensive range of financial assets and investment strategies. As this is a compilation of articles, the 24 chapters cover topics such as the globalization of markets, leverage and working capital in corporate finance, asset and liability management and corporate hedging, investment decisions and business valuation, besides concepts and applications of macro and microeconomics.

Curso práctico de microeconomía Irwin Professional Publishing  
 Internet trolls live to upset as many people as possible, using all the technical and psychological tools at their disposal. They gleefully whip the media into a frenzy over a fake teen drug crisis; they post offensive messages on Facebook memorial pages, traumatizing grief-stricken friends and family; they use unabashedly racist language and images. They take pleasure in ruining a complete stranger's day and find amusement in their victim's anguish. In short, trolling is the obstacle to a kinder, gentler Internet. To quote a famous Internet meme, trolling is why we can't have nice things online. Or at least that's what we have been led to believe. In this provocative book, Whitney Phillips argues that trolling, widely condemned as obscene and deviant, actually fits comfortably within the contemporary media landscape. Trolling may be obscene, but, Phillips argues, it isn't all that deviant. Trolls' actions are born of and fueled by culturally sanctioned impulses -- which are just as damaging as the trolls' most disruptive behaviors. Phillips describes, for example, the relationship between trolling and sensationalist corporate media - - pointing out that for trolls, exploitation is a leisure activity; for media, it's a business strategy. She shows how trolls, "the grimacing poster children for a socially networked world," align with social media. And she documents how trolls, in addition to parroting media tropes, also offer a grotesque pantomime of dominant cultural tropes, including gendered notions of dominance and success and an ideology of entitlement. We don't just have a trolling problem, Phillips argues; we have a culture problem. This Is Why We Can't Have Nice Things isn't only about trolls; it's about a culture in which trolls thrive.

**Economic Analysis of the Arbitrator's Function** Giuffrè Editore

This book addresses emerging questions concerning who should bear responsibility for shouldering risk, as well as the viability of existing and experimental governance mechanisms in connection with new technologies. Scholars from 14 jurisdictions unite their efforts in this edited collection to provide a comparative analysis of how various legal systems are tackling the challenges produced by the legal aspects of genetic testing in insurance and employment. They cover the diverse set of norms that surround this issue, and share insights into relevant international, regional and national incursions into the field. By doing so, the authors offer a basis for comparative reflection, including on whether transnational standard setting might be useful or necessary for the legal aspects of genetic testing as they relate to the insurance and employment contexts. The respective texts cover a broad

range of topics, including the prevalence of genetic testing in the contexts of insurance and employment, and policy factors that might affect this prevalence, such as the design of national health or social insurance systems, of private insurance schemes or the availability of low-cost direct-to-consumer genetic testing. Further, the field of genetics is gaining in importance at the international and regional levels. Relevant concepts – mainly genetic tests and genetic data/information – have been internationally defined, and these definitions have influenced definitions adopted nationally. International law also recognizes a “special status” for human genetic data. The authors therefore also consider these definitions and the recognition of the special status of human genetic data within regional and national legal orders. They investigate the range of norms that specifically address the use of genetic testing in employment and insurance, encompassing international sources – including human rights norms – that may be binding or non-binding, as well national statutory, regulatory and soft-law mechanisms. Accordingly, some of the texts examine general frameworks relevant to genetic testing in each country, including those that stem from general anti-discrimination rules and norms protecting rights to autonomy, self-determination, confidentiality and privacy. In closing, the authors provide an overview of the efficiency of their respective legal regimes’ approaches – specific and generalist – to genetic testing or disclosure of genetic information in the employment or insurance contexts, including the effect of lack of legal guidance. In this regard, some of the authors highlight the need for transnational action in the field and make recommendation for future legal developments.

The success of Brazil in the large-scale production and use of fuel ethanol has been widely discussed and analyzed by other countries interested in adopting policies designed to encourage the use of biofuels. Within this context, certain questions arise: Could the Brazilian experience be replicated in other countries? What were the conditions that enabled the creation of the Brazilian Proálcool (National Ethanol Program) and what lessons can be learned? To examine these issues, it is important to understand the functioning of the key, interconnected markets (those for sugarcane, sugar and ethanol), which, from their inception, were the objects of extensive government intervention until 1999. Two main conditions enabled the creation of Proálcool: robust production of sugarcane and sugar (tightly regulated by the government, which applied the numerous regulations then in place); and the military regime that was in place at the time, whose decision-making and enforcement powers were quite broad, facilitating the carrying out of the necessary actions, as well as making it easier to coordinate the activities of the various stakeholders and sectors involved. This book increases understanding of the functioning of the sugarcane supply chain in Brazil, not only during the phase of government intervention but also in recent years (in the free-market environment). The lessons, positive and negative, gleaned from the Brazilian experience can contribute to reflection on and the development of alternative modalities of biofuel production in other countries, making the book of interest to scholars and policy-makers concerned with biofuel and renewable resources as well as economic development.
