It may come as something of a surprise that pain, the most prevalent symptom in clinical practice, is not always addressed specifically in health professions training. Approximately one in six Americans lives with chronic pain in addition to the millions that experience acute pain each day. Half of older adults live with chronic pain-associated conditions, and about half of all healthcare visits are initiated because of pain. Despite this, reports indicate that the vast majority of health professions schools in the United States do not teach required courses on pain,

and the total amount of content pertaining to pain is a fraction of a percent of the total. Almost certainly, the lack of education in coordinated, comprehensive, compassionate care for pain-associated conditions contributed to pervasive opioid over-prescribing and the ensuing wave of addiction and deaths that swept the country in the first part of this century. This book is our response to the pain care crisis - it is designed to prepare young clinicians to assess and treat a wide variety of pain conditions in a manner that balances competence and compassion, incorporating coordinated elements of pharmacological and non-pharmacological therapies. Designed to be read during or after pre-licensure training, e.g. medical, nursing, pharmacy

school, and to inspire students to learn more about painful conditions, this book is unique in its clinical focus and the level of detail that is included. This book aims to improve pain care, most especially if used alongside a formal pain care course as part of pre-licensure training, whether spread over four years or condensed into a shorter period. Through engagement in the interprofessional curriculum planning process, the content of the book has been shaped to align with the International Association for the Study of Pain (IASP) interprofessional pain curriculum vision and to focus on the primary questions of: What is pain? How is pain assessed? How is pain managed? How does clinical context influence pain? The Governors of New Jersey Routledge

Sensory Processing Across the Lifespan: A 25-Year Initiative to Understand Neurophysiology, Behaviors and Treatment Effectiveness for Sensory Processing Oxford University Press

Just as autism is a continuum of disorders, it is associated with a broad range of neurodevelopmental, social, and communication deficits. For individuals with autism spectrum disorders (ASD), augmentative and alternative communication (AAC) has a major impact on their daily lives, often reducing the occurrence of challenging behaviors. Aided Augmentative Communication for Individuals with Autism Spectrum Disorders is a practical guide to the field, offering readers a solid grounding in ASD, related complex

communication needs (CCN), and AAC, especially visual and computer-based technologies. Widely used interventions and tools in AAC are reviewed—not just how they work, but why they work—to aid practitioners in choosing those most suited to individual clients or students. Issues in evaluation for aided AAC and debates concerning its usability round out the coverage. Readers come away with a deeper understanding of the centrality of communication for clients with ASD and the many possibilities for intervention. Key areas of coverage include: AAC and assessment of people with ASD and CCN. Interdisciplinary issues and collaboration in assessment and treatment. AAC intervention mediated by natural communication partners. Functional communication

training with AAC. The controversy surrounding facilitated communication. Sign language versus AAC. Aided Augmentative Communication for Individuals with Autism Spectrum Disorders is an essential resource for clinicians/practitioners, researchers, and graduate students in such fields as child and school psychology, speech pathology, language education, developmental psychology, behavior therapy, and educational technology. *Tests and Assessments in Counseling* Frontiers Media SA

Xuehua Xiang examines multimodal interaction in the marketplace in a multilingual town at the juncture of urbanization in Southern China. Using a collection of data that span nearly 20 years from ethnographic fieldwork, *Language, Multimodal Interaction and Transaction: Studies of a Southern Chinese marketplace* analyzes multimodal talk-in-interaction in the traditional marketplace as both an economic mechanism and a localized social space. Focusing on how buyers and sellers interact to complete transactions as marketplace shifts from sedimentations of road-side peddling to centralized built space and further to corporate e-commerce, Xiang takes into account the Janus nature of language as

both incurring transaction costs and a powerful tool of information and control. By analyzing the socializing functions of language in the marketplace outside of and beyond economic dealings, the study additionally documents and depicts the roles of affect and morality in marketplace encounters. The study offers an overarching framework for future research on the mediating role of language and multimodal interaction in economic activities as well as on the interplay of information, knowledge, affect and morality in social encounters. *Handbook of Test Development* National Academies Press
