 magnesium. What is
 the best description of
 the observation you
 would make after this

change? a. More electrons are released from the surface, but their maximum kinetic energy is higher than before. Answered: Assume you shine a light at the same... | bartleby If you have a smooth, highly polished surface and you shine a narrow beam of light at it, you get a narrow beam of light reflected back off it. This is called specular reflection and it's what happens if you shine a flashlight or laser into a mirror: you get a well-defined beam of light bouncing back towards you. Light science for kids - A simple introduction to optics The verb shine has two main definitions: (1) to emit light, and (2) to cause to gleam by polishing. In its first sense, shine traditionally becomes

shone in the past tense and as a past participle. In its second sense, shine is traditionally inflected shined. So, for example, we might say, "The sun shone brightly while I shined my shoes." How to Use Shined vs. shone Correctly - Grammarist When light shines on an object, it is reflected, absorbed, or transmitted through the object, depending on the object's material and the frequency (color) of the light. Alignment agreement: Thanks for your feedback!
