Extreme sports, those activities that lie on the

outermost edges of independent adventurous leisure activities, where a mismanaged mistake or accident would most likely result in death, have developed into a significant worldwide phenomenon (Brymer & Schweitzer, 2017a). Extreme sport activities are continually evolving, typical examples include BASE (an acronym for Buildings, Antennae, Span, Earth) jumping and related activities such as proximity flying, extreme skiing, big wave surfing, waterfall kayaking, rope free solo climbing and high-level mountaineering. While participant numbers in many traditional team and individual sports such

as golf, basketball and racket sports have declined over the last decade or so, participant numbers in so called extreme sports have surged. Although extreme sports are still assumed to be a Western pastime, there has been considerable Global uptake. Equally, the idea that adventure sports are only for the young is also changing as participation rates across the generations are growing. For example, baby boomers are enthusiastic participants of adventure sports more generally (Brymer & Schweitzer, 2017b; Patterson, 2002) and Generation Z turn to extreme sports because they are popular and

linked to escapism (Giannoulakis & Pursglove, 2017). Arguably, extreme sports now support a multi-billion dollar industry and the momentum seems to be intensifying. Traditional explanations for why extreme sports have become so popular are varied. For some, the popularity is explained as the desire to rebel against a society that is becoming too risk averse, for others it is about the spectacle and the merchandise that is associated with organised activities and athletes. For others it is just that there are a lot of people attracted by risk and danger or just want to show off. For others still it is about the desire to belong to sub-cultures and the glamour that goes with extreme sports. Some seek mastery in their chosen activity and in situations of significant challenges. This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation. There is a pressing need for clarity. The dominant research perspective has focused on positivist theory-driven perspectives that attempt to match extreme sports against predetermined characteristics. For the

most part empirical research has conformed to predetermined societal perspectives. Other ways of knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation. This special edition brings together cutting-edge research and thought examining psychology and extreme sports, with particular attention paid to the examination of motivations for initial participation, continued participation, effective performance, and outcomes from participation. Success in high performance sport is highly valued in today's world, with lucrative contracts, sponsorship deals, and opportunities for celebrity status balanced against substantial investments of time and energy, and high chances of failure. With pressure mounting on athletes and coaches to make the most of athletic investments, the temptation to make health-related or ethical compromises is growing. Sustainability in High Performance Sport examines the pressures faced by coaches and athletes, and considers how sustainable science can offer alternative pathways to sporting excellence. By applying principles relating to carrying capacities, complexity and

uncertainty, production and consumption, and ethics, this unique book provides new ways of thinking about both enduring and emerging challenges. With a scope that includes themes such as coaching practices, coach-athlete relationships, over-training and injuries, the development of sporting expertise, and doping, Sustainability in High Performance Sport is the most comprehensive exploration of sustainability in elite sport available. Brentano's Aquatic Monthly and Sporting Gazetteer Penguin

This ground-breaking interdisciplinary collection brings together leading

international scholars working across the humanities and social sciences to examine ways in which representations of sports coaching in narrative and documentary cinema can shape and inform sporting instruction. The central premise of the volume is that films featuring sports coaches potentially reflect, reinforce or contest how their audiences comprehend the world of coaching. Despite the growing interest in theories of coaching and in the study of the sports film as a genre, specific analyses of filmic depictions of sports coaches are still rare despite coaches often having a central role as figures shaping the values, social situation and cultural expectations of the athletes they train. By way of a series of enlightening and original studies, this volume redresses the relative neglect afforded to sports coaching in film and simultaneously highlights the immense value that research in this emerging field has for sporting performance and social justice. This book was originally published as a special issue of the journal *Sports Coaching Review*.

Sport is often at the centre of battles for rights to inclusion linked to class, race and gender, and this book explores struggles centred on disability in different cultural settings in Europe, North America, Africa, Asia and Oceania. It challenges oversights and assumptions about the 'normal' body, and describes how individual and organizational transformations can occur through sport. The abilities of a person are recognised and placed centre stage - instead of the individual being forgotten, excluded, or placed at the margins simply because they have a disability. National, regional and global change is part of the shift to the rights based approach reflected in the 2006 UN Convention on the Rights of Persons with Disabilities. Making sport inclusive affects the accessibility of facilities,

funding, the media, policies, programs, organisations, sponsors and spectators, and at the same time changes the cultural values of the wider society. It also raises issues about competition access and eligibility for 'different' and technologically enhanced 'cyborg' bodies, and for those most socially disadvantaged. Addressing these questions which ultimately touch on the real meaning of sport can lead to profound changes in people's attitudes, and how sport is organized locally and globally. Growth in the influential global organisations of the Paralympic Games, Special Olympics and Deaflympics is examined, as is the approach to

disability in sport in both advantaged and resource poor countries. The embodied lives of persons with disabilities are explored utilizing new theoretical models, perspectives and approaches. This book was previously published as a special issue of *Sport in Society*.
